968	967	5/15/2017	To many lines of supervision. Too many supervisors without vision and lacking trust in staff to do the duties without their constant micromanagement. A new idea or project is being held hostage by the 1st line supervisor. Sometimes the ideas are presented, to later being executed by the 1st line supervisor taking away the credit to the employee. In other words, the same people are always doing the job and the staff is sitting down unable to be direct participant of the decision-making process, inhibiting the agency to move forward and be more efficient.	If the supervisory and higher management time in service be rotational after a max of 10 years- that provides opportunity to staff to demonstrate leadership abilities. The power is held by a few until they decide to retire, some of them are not efficient because they were selected due to a "like-ability" choice not by skills, experience and knowledge. It the term of supervisory is limited- rather than for life-- new ideas, new procedures can be implemented to make a program more productive. Supervisors with a history of abuse of power and discrimination should be removed immediately- waiting for a long process of investigation ended costing the agency lots of money, time and efforts to protect a manager who discriminate.	.Allow technical staff with expertise equal access to meeting with all our customers. Management keep within themselves the decision making instead of incorporating staff into the process. Again too much line of managements that is not necessary. In the private sector project are assigned to staff and the supervisor is just a liaison to move the project to fruition- not to impede it with back and forth ridiculous request that if properly assigned and discussed from the beginning it would just moved the final product to fruition. Supervisor or management delaying projects demonstrated the incapacity of that supervisor to perform efficiently trickle down to the staff an unnecessary delay and creating the disappointment and holding of creative ideas of staff since the supervisor is inefficient.	Let the staff deal directly with the states and tribes and the regulated community. Take away level of management who impede faster problems solutions. Remove all SES position and deputy positions. What type of job they do in reality ? Some of them are out of the reality of what is happening in the programs. Most of them focus their time in remove employees they don't know are performing well in their job or support discriminatory actions from supervisors.	Yes, SharePoint is a good technology to take accountability of work done and a record of productive employee- of course when micromanagement is eliminated.	Staff should be able to rotate to other areas where a project need immediate solution. Opportunity of rotational is only offered to a few, regardless of experience and interest. Usually offer to those "like" not those with expertise. A faster mechanism to facilitate rotational and supervisor removal after

967	The response program currently co-chairs and support the Regional Response Teams which maintains a constant dialog and contact with fellow state and federal agency partners. This concept could perhaps for of use in other programs. Our specific program uses the concept of one staff is a point of contact for each state and coordinates all program aspects with the appropriate state programs. These staff do this duty for 3-5 years to develop relationships then rotate so as to over time improve the overall group???s relationships with the states. Internal: Sharepoint has a long learning curve, but
968	Yes, the agency retain employees beyond the age of retirement. There are employees with 70 or 80years old still at the agency who have certain reduction or no productivity performance at all and no buy out plan is offered to them earlier to make them retired. That is a waste of an FTE when the employee has passed 64 years old and is incapable of being productive or is not challenged to be productive. The agency seems to be performing the duties of a senior-citizen center , it takes away the moral of staff who wants opportunities or are being working hard while others are snoozing around.

969	968	5/15/2017	I play a part in processing FOIAs. Currently the Division Director is required to signoff on all response letters. I believe a better use of their time, and to reduce processing time a delegation to the Branch Chief for Full Responses, Partial Denials, Full Denials, and responses that are No Records should be delegated to the Section Chief.	I am a big believer in public-private partnership. However, the emphasis should be on PUBLIC. I think establishing more liaison positions/details to the states and local communities would be ideal, with a clear hierarchical order. Such as: Region X Coordinator--> 1 state liaison for each state, per EPA division (WD, ARD, SF, etc), with one of the liaison's being the lead. Taking a person-centered approach. Additionally, clear up gray areas about which responsibility is whose. Private Sector: When working with facilities (public or private), it is in their interest, EPA's, America's, the public's, and the world's to be as efficient as possible, but by not leveraging the environment and human health. I believe presenting in	Be an engaged listener, empathize with the stakeholder, and follow-up. Good customer services goes a long way with folks. We may not be able to solve everything, but sharing with them what you can do, rather than what you can't provides a positive focus.	Yes, increase the use of electronic tools. Reporting for NGO's, governments and facilities should be centralized and streamlined. We should no longer be accepting paper, and nor should organizations be submitting paper. We have secure electronic signatures, and tools at our disposal to increase efficiency and reduce costs. This endeavor should include intense and regular training for staff so they may have confidence and competency with working with electronic tools. Increase funding for LEAN. Freeing up resources will go a long way with folks, but it needs focus on leaning out processes needs to be a major priority.	SharePoint, Electronic reporting submissions, and facilities should all have registered and maintained email inboxes.	I am sure it depends on the situation.
970	969	5/15/2017		We seem to prioritize conference calls and webinars over face to face meetings. I suggest a greater emphasis on face to face meetings. Partnerships are based on trust. It is much more difficult to establish trust when one cannot see the person they are talking with. Of course, this will require a larger travel budget and prioritization of travel as a tool. Efficient and effective face-to-face meetings will go a long way to enhance our partnership efforts. We need to get out of our cubes in Atlanta and actually see what our partners deal with on a day to day basis.				

AMERICAN OVERSIGHT

	I
969	Use all available electronic tools, provide training, do not keep things we do not need to keep, reassess efficiency by inquiring to staff about issues of inefficiency, and make it a priority to cut administrative redundancies.
970	I have worked at EPA for 27+ years. When I began my career, we hired employees with a variety of backgrounds and experiences with both conservative and liberal opinions: other govt. agencies (federal, state & local), non-governmental entities, private industry, veterans, 1st job recent college graduates, interns, etc. Because we were all had such a variety of experiences, it broadened both the depth and breadth of Agency knowledge and approach to issues. We also seemed to have a greater respect for each other and our mission. Now we focus and prioritize our hiring from Peace Corps and other liberal focused groups. I'm not suggesting the new employees are not

AMERICAN OVERSIGHT

971	970	5/15/2017				Considering the President's agenda to work harmoniously with business and reduce undue enforcement and regulations. Why does the EPA need an Office of Administrative Law Judges? They only rule in favor of the Agency and have a long track record of doing so. If we are reducing regulations then we should be reducing their oversight on businesses. Also it is my understanding they only hear a few EPA cases a year. The majority of their cases are other agencies. Why would we have an office wasting tax payers dollars doing other agency work?		See comment #4. EPA should use other agencies Administrative Law Judges to preside over the few cases each year. That number should be even lower with the President's agenda to reduce undue burden on private industry to be productive. Funds from that office can be diverted elsewhere and save the public unnecessary spending.
972	971	5/15/2017	Basic functions turn into a nightmare experience for staff like on-boarding, or computer service to getting a key to your own office. This can be automated as part of ticket request for service, Region 2 has a system where you apply for a service via computer without any concerns on who you need to direct a request, simply request for a service and it gets directed to the appropriate office. Additional add the monitoring or reply and resolution of requests. EZ-Tech service in HQ is absolutely terrible- get better service or remove the contractor. The share services needs to have a WAM/DOPO/COR, for each task, that is held accountable for not addressing timely response - performance based contract. OEI issues need to be address where projects still have program office control- it appears that OEI doesn't have appropriate oversight and the programs are paying for substandard service and deliverables.	Improve our database and compatibility of these database systems. Remove the program stovepipes that are blocking our ability to collaborate and cross-cutting program strategies to be leaner and more flexible. We talk a lot about this, but in practice we are weak and our own enemy. Use NEPPS better. OECA and program should have a better relationships instead confrontational.	Improve internal relationships within the agency first. See my comments in questions 1 and 2. The quality of staff impacts our ability to form relationships, the basic skills and education are lacking in the agency. EPA is heavily a science and engineering environment, as well as the need for legal skills for rule development and interruption. We need to be very thoughtful and purposeful when selecting staff for specific jobs- skills does matter for a lot of positions. As for Managers in the agency, he has many skilled engineers and scientist that don't make good managers- but the system for improving financial is to be a manager- people are being managers for the wrong reason. Lack of transition phases results in losing historical or professional knowledge, we need to be able to backfill positions before we loss the staff or manager to help the replacement in receiving the transition on knowledge.	We need more flexibility will budgeting funds like the states do under the NEPPS. Cross-cutting program strategies should be encouraged by allowing them to be funded separately to break down the stovepipes in the agency. There are some questionable selection of managers and staff that disables the ability of others to come up or even get cross-program experiences necessary to improve the staff skills and agency's ability to address the complex and multi-program issues in a efficient and effective manor.	Again, new technologies integration has been a difficult process in the government- we have too much bureaucratic red tape that inhibits that government to work efficiently and effectively and it ends up be costly to the agencies when they attempt to install technology. We need a method to get the best skilled technological experts on a temporary basis to get the technology up with agency-staff working side by side with these experts- learning the necessary skills to support the technology once the hired experts leave the project.	Tie additional funding to collaboration and integration of cross-cutting programs. Establish an efficiency or lean workgroup to assess the multi-program application to the fund allocation. The agency has to be upgraded in all aspects- staff skills, computer technology-database, modernize the office administrative abilities.

973	972	5/15/2017		I submitted some ideas last week for this question in this survey.	I think staff should be provided some customer service training.	I submitted some ideas last week for this question in this survey.	I am a fan of having easy to use IT systems for human resource functions with strong security to protect the information. It helps staff be able to self modify and update their personal records, benefits and timecards. Thus freeing up human resources to focus on being strategic, hiring and training. I wish our computers read thumb prints instead of using our badges to log on. Staff sometimes forget their badges in their computer, I have forgot a couple times too. Unfortunately, the guards downstairs have to waste time signing us in when we forget our badges in our computers. Maybe one day there will be another way via an eye scan or thumb reader to secure the computers.	Centralize some of the common functions of the Agency, but being careful not to create bottlenecks. If some roles are centralized there must be enough staff in those functions to keep paperwork and work flowing smoothly. The upside is that some procedures could be standardized if those experts worked together to come up with some best practices from across the many EPA offices in the centralized fields/expertise.
974	973	5/15/2017	Having to enact a Performance Assistance Period (informal) prior to completing a Performance Improvement Period (formal) for employees with performance deficiencies.		Having more town halls to hear how the people in communities feel about the environmental challenges that they face, especially in low-income areas where they may not have other avenues to effect change.		Use a payroll system that interfaces with FPPS instead of using People Plus which does not. This would allow for better management of FMLA leave and how LWOP affects benefits, etc.	
975	974	5/15/2017	The use of user unfriendly electronic systems that are not interconnected and are NOT systems of record wastes time, paper, and space. Paper official record files are inefficient and limit management's ability to identify both need for additional training and poor performance.					

AMERICAN OVERSIGHT

	I
973	Please continue the Skills Marketplace part-time detail assignments and offer more lateral full-time detail assignments to help share talented staff and grow their skills and experience more. Some of the best staff have worked in more than one EPA office. Expanding the regulatory and technical expertise of staff through on the job experience is valuable to the staff and Agency.
974	
975	As a longer-term investment, efficient, user-friendly, and interconnected electronic systems would lead to improved efficiency, increased accountability, and reduced costs.

976	975	5/15/2017	EAS the purchasing system is exceptionally inefficient, frustrating and just plain bad. As Management drives us to use it more and more ostensibly so they can track work, less and less gets done. It is a serious drag chain on productivity. Fedconnect is difficult and frustrating for the contractors. It is unfair to small businesses who do not have the time or resources to waste. The Agency attempts at going paperless requires double work to keep both the paper (Official copy) and the electronic copy. The Environmental Protection Agency Acquisition Guide (EPAAG)is a joke! This replaced the Contracts Management Manual (CMM) and the Acquisition Handbook. It is 50+separate word files (partial chapters) on a website. There is not a cohesive manual or volume. I	None	None	Management on the whole, lacks any kind of serious business like mentality. First line managers do not even possess even basic supervisor skills. The supervisors and managers are very unskilled. The underlying issue is the EPA???s culture combined with base line budgeting. EPA personnel are not concerned with doing things more efficiently or more cost effectively. The Programs think they are doing God???s work and Management gives the appearance of only being concerned with hiring their friends and building their kingdoms. The prevailing thought is to spend all the money so they	The problem is not the use of technology; it is the culture of EPA.	
977	976	5/15/2017	Lack of internal communication from Administrator???s and AA-Ship Offices: ???Town halls???/???All hands??? at the AA-ship level to share information; Lack of political middle management; Lack of Administration that supports overall EPA mission; Unclear procedures for document review, briefings, and decision-making: Streamline, communicate and follow a consistent protocol; IT Support limitations: o Lack of autonomy/ability to manage basic personal settings on computers vs. need for Administrator rights: Having ability to change basic (non-security) settings at a personal level (e.g., EXAMPLE) would be supportive of efficiency/effectiveness o Engaging staff in identifying IT needs (e.g., software, hardware, program development, trainings) o Frequency and timing of updates (e.g., Java; patches; badge alert) impedes work productivity: Timing could be adjusted to avoid prime work hours o Continue to support the Microsoft helpline and similar resources.	* Provide attention and funding to underfunded programs; Listen and respond to states on their funding priorities; Encourage State-Federal Employee details (i.e., IPA???s); Ensure sufficient EPA staff to coordinate with State/Tribe/Community/Private Sector counterparts; Address/support states in addressing interstate issues; Engage/collaborate with broader-based external partners/organizations - recognizing the ???bigger picture??Â of EPA???s holistic Mission in addition to collaborating with local/media-driven organizations; Enhance funding to external organizations that represent states.	Preserve funding for hotlines that serve the public (and others) and support user-friendly design that allows a caller to reach a person (rather than an e-message/menu); Ensure sufficient program funding and staffing; Prioritize communication materials for outreach; Review of communication materials; Provide training to support staff in differentiating between education/outreach and lobbying thus enhancing EPA???s ability to effectively communicate with states, tribes, local communities, the regulated community, and the public at large; Enhance depth, detail and resource accessibility on EPA???s website.	* EPA is already running at low cost/under budget ??? some programs have done so, historically. This contributes to inefficiency, ineffectiveness, reduction in environmental protections, and ultimately, a cost burden; Ensure transition/turn-over planning to preserve institutional knowledge (e.g., develop a program/protocol/process to facilitate this); Invest in robust onboarding, long-term support and training of employees as is often done in the private sector to improve retention and productivity (e.g., Fortune 100 and 500 Companies).	* E-reporting E-permitting; Encourage and facilitate data sharing across programs, with internal and external entities; More frequent updates of IT infrastructure ((Computers; Programs (e.g., Concur; Webforms; IGMS)); Frequency and timing of software updates (e.g., Java; patches; badge alert) impedes work productivity: Timing could be adjusted to avoid prime work hours; Enhance support for existing technologies and raise awareness of their availability and applicability to our work; Support increased interaction via remote communication (i.e., webcam functionality; training and instructions on accessible resources).	Recognize and continue existing strong partnerships with Federal and State agencies; Depoliticize interactions and scientific engagement occurring with Federal and State agencies; Encourage Federal partners to continue existing work; Strengthen/enhance communication with interagency offices and clarify roles/responsibilities of agencies on particular topics.

978	977	5/15/2017	There is a lot of red tape to cross to get almost anything accomplished. Streamlining the amount of paperwork would really help. Consolidating the amount of website that the EPA uses and the amount of passwords there are: R2,Sharepoint, Concur, GSA, BENEFeds, EODS, eOPF, etc. Having to write a procurement to just buy duck tape seems unnecessary				Currently, several regions have multiple labs for running samples. Each lab has a certain branch they are under. These labs should be consolidated or able to work together to take care of everyone needs not just their certain branch. this would allow for less down time for each lab and would increase efficacy and would follow the ONE EPA standard. The private sector operates as one business wither they are a local, national, or international company. The EPA has not embraced this idea nor adopted the ONE EPA standard. Currently, there are ten regions with ten different ways of doing the exact same task. Some of the following include: Standardizing SOP ??? Example Groundwater SOP Having one IT department	
979	978	5/15/2017	The process for getting websites updated, or creating new informational content to distribute to the public is unclear and cumbersome.	We need to be giving more funding to states and local governments so they can build capacity and expertise in these areas. AND we need to reduce the case load/project load on EPA employees so that we can spend more time advising and providing guidance to these governments so they can make the most environmentally and economically sound decisions for long term benefit to their constituents.	Increased hiring for all EPA programs that partner with the community in any way, and reduced case load/project load on these employees to enable them to spend more time one-on-one with communities of all sizes.		Simply maintaining our meeting spaces and existing technology would be a huge improvement. Having updated computers and projectors that work every time in each conference room; I would like a computer that recognizes wifi without being hardwired into a network first.	Encouraging federal partnership and potential cross funding opportunities so that environmental protection led by EPA is met with housing and development funding from HUD, transportation funding from DOT, measurement and improvement of health outcomes by HHS, etc. I don't feel that any of the expertise or function of any other agency mirrors that of EPA exactly, each brings a context and a knowledge of their unique issues that is important to doing the best work for our constituents.

AMERICAN OVERSIGHT

980	979	5/15/2017	I believe the administrative requirements, management procedures, and other processes work together to make my job as efficient as possible; however, one area can be improved. The delivery of products by new vendors can make my job more e efficient.	We can achieve better environmental results by listening to the concerns of our partners and addressing each concern step by step.	We can provide better service by interacting with our customers. Town hall meetings, webinars and face to face conferences allow all an opportunity to get to know one another and communicate directly.	Increasing our efforts in recycling can continue to reduce costs and inefficient processes. All Americans can participate in recycling.	Continuing to explore technologies which produce energy, such as solar and wind turbines technologies can increase our efficiency.	Combining Federal Agencies may be a solution or it could produce an Agency that cannot meet the demands of the Public.
981	980	5/15/2017				Management needs to help foster a culture shift. All employees should want to make processes more efficient, which is better for us - we will complete our work more efficiently and quickly, and is better for our customers. Educating employees about process improvement tools such as Lean Six Sigma and why it is useful to them on the ground in addition to the agency as a whole will help shift the culture to wanting to be more efficient which will reduce inefficiencies and costs throughout EPA.	They problem with obtaining new technologies is the lack of funding to procure them and the lack of IT staff to help installing, maintain and trouble shoot throughout the lifetime of the technology. We need more IT staff before we can truly bring the EPA into the 21st century.	
982	981	5/15/2017				Recommendation: To reevaluate the organizational. Fewer supervisors/managers [GS-14/GS-15] levels would dramatically reduce costs. For example, within our organization, we currently have a Branch that is composed of [1 GS-15; 2 GS-14 - supervising 3 employees @ the GS-12/GS-13 levels).	Phasing out mailing EPA publications and replacing that mode of communication to the public w/social media - twitter, Facebook, etc. Of all Agencies, EPA should set the example of not using printed materials to inform the public. With the thousands of boxes of materials, often outdated, the funds associated with printing these materials could be better spent.	

AMERICAN OVERSIGHT

980	Greenspark Launched in 2014, the GreenSpark program provides an online platform for offices to launch ???challenges??Â or requests for ideas from employees about how to solve a problem/meet an objective or for stories about employees??? contributions to advancing EPA???s mission and priorities
981	Lean Six Sigma A culture shift that encourages employees to want to change. Many of the long-time and/or older employees are not very open to change. And communication needs to increase among employees/sections/branches/divisions, as well.
982	The flexplace model in our organization is not be utilized as intended. Instead of adhering to the prescribed 2 days working from an alternate work location, the majority of the employees change their days on a weekly basis for their benefit vs. the Agency. Private sector would not allow such practices.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
983	982	5/15/2017	The Pollution Prevention Grants shouldn't be a competition for awards between the states. All the states that are interested in implementing a pollution prevention program should have access to these funds. Just take the pot of money and divide it among the states that will execute the program in their state. Then have the state compile the results for their state and send them to EPA. At the federal level we would advise and work with the states to implement the pollution prevention. The grants process is cumbersome. I'm not sure PARS is a good system. I don't think results are awarded. I think the "squeaky wheel gets the oil" and the higher rating. Almost like a popularity contest with favoritism built in.	EPA used to have two voluntary programs called National Partnership for Environmental Priorities (NPEP) and Performance Track that incentivized companies to make environmental improvements voluntarily. The programs provided awards for accomplishments and also gave regulatory relief if certain requirements were met. We should partner with trade organizations, manufacturers and vendors to manufacturers to capture the best ideas to improve efficiency, save money and reduce pollution. I think for profit companies like engineering consulting firms with specific qualifications should be allowed to compete for grant funds to do pollution prevention projects.	Praise, reward and promote the lessons learned from the voluntary environmental improvements made by businesses and other organizations.	Expand Flexiplace. I think many are recognized at EPA for making more noise than others rather than achieving tangible results. They seem to be the ones who get the higher PARS ratings. I think if concrete tangible accomplishments like pollution or costs reduced or projects completed were recognized with high PARS ratings or even monetary awards, the focus of people here would be more on concrete results and not on how many briefings one gives his division director, conference calls conducted, knowledge transfer sessions done or all day and more meetings that accomplish nothing.	We record data, reports and results in too many software packages and places. For example the same Pollution Prevention and Sustainable Materials Management information is reported to ReTRAC Connect, ACS, P2 Grants Plus and IGMS. There should be one central user friendly software data base for this information.	I would increase the coordination between DOE and EPA, because of the opportunities to work with manufacturers in improving efficiencies and reducing toxics use. In addition, I see possible coordination between FDA and EPA Pollution Prevention for food manufacturing efficiency improvements.
984	983	5/15/2017	We have way to many training requirements that do not directly relate to our jobs. For example, staff who manage work assignments must complete 40 hours of training every two years. Most of the training has absolutely no relevance to the job requirements. The software they have to use is not user friendly. If we need training it should be tailored to the jobs staff actually perform. I recommend a through review of administrative training requirements to focus on what is really needed, and creation of one software program that personnel can use for everything related to training (there are now several) The action development process is cumbersome and should be streamlined. The tier 3 process as practiced by OAR is sufficient to allow other AA ships to have input for almost all rules. The tier 2 and 1 designation for rulemaking should be limited to complex rules or rules that are really breaking new ground.	We need to expand and strengthen the Regional Offices so they can better assist the States in carrying out their responsibilities in implementing air rules. The States are currently overwhelmed. We should also strengthen the compliance office so they can better assist the states.	See item 2 above. Note that the EPA regional offices are the point of contact for states, tribes, local communities, the regulated community, and the public at large.	Fewer "advisors" "consultants" and "policy analysts" at headquarters. Make more people accountable for actually producing environment results (regulations and regulation implementation).	Many of the software programs we use are not user friendly. Ones that come to mind are People Plus, the Interior FPPS system, Gov trip, and EAS. We should be able to do better. Note that the average person at EPA now spends a lot of time on their computers using various software. Time wasted dealing with bad software is time away from carrying out our mission and wastes taxpayers dollars.	No suggestions here.

AMERICAN OVERSIGHT

	I
983	Our Flexiplace program saves the agency money and improves efficiency. We should increase the number of days folks can be on Flexiplace, but still make it voluntary. Most of my work can be done from anywhere or requires site visits. My commute is over an hour into to the office. So, for me it would save money on commuting costs, fuel costs and the general aggravation of dealing with traffic and an undependable train system (SEPTA).
984	None come to mind

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
985	984	5/15/2017	In Region 8, we have to copy a concurrence block template to the bottom of documents we are routing for concurrence. This block is not necessary, consumes staff time to prepare the block, and wastes at least one page of paper for every page that the block is copied on to. Instead, concurrence signatures can be captured without the concurrence block template as it has been for years.		The general public should have access to a state/community EPA liaison. A state/community EPA liaison for the general public will help connect the public to the services of the EPA and ensure their needs are being met.	We really don't need all of the space/building square footage to accomplish our mission. Instead, there should be more focus on the ability to telework in order to reduce the Agency's footprint.	SharePoint could be utilized further to increase staff efficiency and effectiveness; however, IT support and regional support for this platform is sub-par, at best.	I'm not sure that shared responsibility and mutual interest will be the most efficient. Instead, shared responsibility and mutual interest seems like it could lead to a lot of federal redundancy. The regional haze rule is an example of where there is federal redundancy...perhaps I just don't understand the question.
986	985	5/15/2017	1. Cumbersome electronic resources--Concur (for travel) and Webforms (for internal requests)--single sign on for any database accessed through our system would save time (and money). Travel policies should allow for lowest fares when staff knows they have to attend a conference or meeting (sometimes the cost savings are dramatic). Procurement procedures can take months for approvals. Purchase Card holders are held to such strict requirements, that few people are willing to "be responsible" for other branch purchases and cards cannot be used more than one month in advance--conferences often require payment for booth space up to 6 months prior to the conference. Follow-up and follow through create excessive productivity loss. 2. Streamlining approval processes--give supervisors authority to approve most staff requests. Flatten organization. 3. Clarify HQ Programs versus Regional Management--who runs the programs? For national continuity, it should be HQ Programs--therefore, regional	EPA, states, and tribes should be using the same "play book." Nationalization of good, sound environmental policies should be considered. States and tribes need adequate staff to do the duties deferred to them; many states/tribes are very lean on staff. Our program works well with local governments.	Better customer service comes from strengthening staff training--especially those that have never worked outside the federal government. As a former private-sector employee, attitudes regarding customer service are different for those that never have worked in a private sector position from those that have. "It's just the government way" is never a good response to a question as to why something is done a certain way. There is little credibility given to those of us that haven't been federal employees for our entire career. We could be very beneficial to streamlining effectiveness and efficiencies!	Biggest opportunity is forcing management out of their comfort zones and thinking creatively--how can this task be more cost effective and more efficient? Listen to former private-sector employees to assist in seeing the organization potential. Reorganization doesn't mean shifting "titles," it means doing business differently. It should mean removing (or moving) staff that is in the wrong position, it should result in visible change that makes our efforts stronger. We do a great job in protecting human health and the environment, we just aren't always doing it the most effectively. Part of that problem goes back to too many layers. (Sadly, too much military influence, "chain of command," top-	We already have the new eDFS time reporting process in place that enables accurate time accountability for those of us that are using daily flex schedules. It captures our time to the minute. All staff members should be accountable for their accurate time, as well. Staff member that work straight 40 hour workweeks, still should account for 40 hours and those using compressed work schedules should be held accountable for the nine-hour days that they have agreed to work...often staffers are someone lax in working their full schedule--coming in a few minutes late or leaving early. Over the range of offices, that is thousands of dollars that the agency is not getting value for. All staff should be held accountable.	The government has allowed mission creep, making working with other agencies more difficult. Once there is less duplication of responsibility, working together will become easier. Hand-offs and collaboration will be required for all agencies to provide the best customer service to our states, tribes, local communities and private sector. Now there is little need to work together.

985	Region 8, along with one or two other regions, uses SharePoint to streamline our air state implementation plan (SIP) process to improve our efficiency and reduce costs. Region 8 uses SharePoint as a collaboration and concurrence platform to manage SIPs. There could be a national workshop to help other regions and HQ use SharePoint to process SIPs.
986	Flatten organizations to allow access and interaction between staff and management. Allow for creativity and free-flowing exchange of ideas. Avoid a military-like atmosphere. Expect staff to be responsible and hold them accountable. In the private sector, staff members where allowed to do their jobs and take responsibility for their actions--if they failed, they lost their jobs. If they succeeded, they were rewarded. We allow far too many to drag our progress down by lack of accountability. Friends and family hiring practices also need to be reviewed. Private-sector best practices--if a process gets in the way of progress, it's the process that needs to be revised, not the timeline

987	986	5/15/2017	I would get rid of the EPA travel agency and online booking system and just have people book their own travel claim back expenses as is done in the private sector. It is super confusing and uses up way too much FTE between the traveler, management, administrative assistant, and now a centralized help desk because now we're not even allowed to use it ourselves. 99% of the time, travelers can get better rates online which they should be able to do if a refundable fare is not required. The agency fees are completely ridiculous for what the service actually provides which IMO is just another level of bureaucracy and expense. Furthermore, why is a "no-cost" TA ever necessary?	Channeling more respect for the agency's mission in the public rather than economic interests AHEM SCOTT PRUITT so states, tribes, local communities, and the private sector are incentivized to work with us and actually believe we are going to follow through on promises instead of backing out due to lack of funding and whimsical reprioritization of commitments.	More grant funding with less red tape. Literally all that our stakeholders are interested in is money and technical assistance, so if we could actually provide that without enormous hurdles, that would go a long way. In terms of the public at large, see above comment re: channeling public respect for the important work that we have been doing for decades.	Supporting money for research opportunities, either through ORD or grant funding. Research into new scientific techniques leads to increased efficiencies in environmental investigation in the future. Also, centralize EPA's contracting and staff it with people who actually know what they are doing.	More use of real-time sampling techniques that would allow for quicker decision-making in the field. Get rid of any paper-based HR processes. Get a contractor to fix EAS, SharePoint, Concur, <<insert any other electronic system here>> to make the systems more user-friendly so people will actually use it without their heads exploding.	Sponsor interagency conferences to educate all stakeholders on the latest environmental research so staff is up-to-date and there is no duplication of effort. Oh wait, that might cost a tiny bit of money and therefore it will never be done.
988	987	5/15/2017	EPA needs to speak as one voice that our main mission is to protect human health and the environment. Enforcement will proceed to ensure uniform standards are maintained, and that no one will get a competitive advantage from polluting.	States need to be held accountable to ensure national standards.			Continued and expanded use of Internet. EPA must publish all data, especially climate change data, to ensure efficiency.	States need to be held accountable to ensure national standards.
989	988	5/15/2017				Eliminate the matrix in ORD. The structure creates two forms of management (L/C/O and NPD), which are sometimes duplicative and conflicting.		

AMERICAN OVERSIGHT

	I
987	The private sector has MUCH MUCH better administrative technology systems. Reduce barriers to overtime, or better yet, comp time (a zero cost way to have employees work more when they need to, and take off when they need to).
988	
989

990	989	5/15/2017	In certain areas within EPA there are teams with less than 5 people with a team leader and then a program manager with less than 20 people. In those situations I don't see the real need for a team leader position which could also serve as a cost savings... Also in certain instances contractors are paid for work that could ultimately be done by a student intern however EPA no longer has a paid (or otherwise) intern program - if this was established such work could be done much cheaper and benefit entry level workforce.	We are already partnering a lot with our states and local communities through constant communication and outreach of baseline conditions, work being done, getting input from community through implementation. I can also see including the private sector when applicable (as in owned or operated property nearby or impacted by certain assessment or clean-up activities) but involving the private sector has no relevance if this is not the case.	Outreach to such groups regularly and often - this is nothing new to us we do it all the time and treat all members with respect and as part of our team/project.	The superfund remedial process is extremely process driven and as such many RPM's appear highly process driven as well, and very driven by contract support. That program could be re-evaluated to determine what steps could be streamlined. These clean-ups are also very costly due to the huge reporting requirements and contractor costs of preparing such reports. Why couldn't this be evaluated and tailored more like some parts of the removal program. Recommend analyzing each different step in the process for possible streamlining and also allowing and encouraging staff to think innovatively to save time, resources and funding .	We are currently evaluating innovative field methods to streamline sampling and assessment processes.	Definitely combining areas of expertise such as contracts and grant support would save costs. Many scientists and engineers are required to know extensive knowledge of grants and contracts which takes away project support and takes more time since such activities are not everyday activities...
991	990	5/15/2017	1. Dealing with serious employee performance problems. The federal system makes it extremely labor intensive and difficult to address serious performance problems. Entire books have been written about how to fire a federal employee with serious performance problems. That alone speaks volumes. While we must have a system that is fair to employees, it should be revised to make the system less labor intensive to address serious performance problems. The current system is a deterrent to managers addressing these problems, which ultimately prevents the agency from accomplishing its mission efficiently. 2. EEO reform. The EEO process, in which employees allege discrimination by the agency, is in need of revision. It's extremely important to have an effective EEO program, to remedy the very serious matter of discrimination. However, the vast majority of EEO complaints are from unhappy employees seeking an avenue to address their grievances, and don't

992	991	5/15/2017	Our financial management system, Compass, does not have expanded features activated in its current configuration to allow funds tracking below the Laboratory/Center/Office level within the Office of Research & Development (ORD). As a result, ORD uses a separate system, Integrated Resources Management System (IRMS) to track these costs to a more detailed organizational or work breakdown level. IRMS requires separate data entry from information residing in COMPASS and frequently data entry errors occur. If EPA were to purchase the expanded COMPASS funds tracking modules, IRMS would not be required. Data would be entered and tracked to the lower organizational levels and actual expenditures against these resources would be automatically updated in COMPASS. This effort would save significant time and resources for the Agency. It would also streamline the functional requirements for funds execution. Implementing this upgrade should free up administrative resources		EPA currently maintains library access to its employees and the public based upon a 1971 policy. The electronic resources available from this interface are impressive and extensive, with a great deal of attention being placed on improving the software interface. However, EPA also maintains "brick and mortar" libraries at each of its facilities for its employees and the public. For example, sites such as the Robert S. Kerr Environmental Research Center in Ada, OK, is required to maintain access to a "brick and mortar" library for the general public. These libraries require funds to operate them, typically through on-site contractors. They also have footprint costs associated with them for utilities, rent and accessibility. It is recommended that the policy to have "brick and mortar" libraries be evaluated and if these are not required by law to do away with or, if required by law, investigate			
993	992	5/15/2017	The burden of mandatory on-line training classes is growing. Does anyone count up the agency wide people-hours needed for a new 30-minute class? [0.5 hours x 15,000 employees = 7,500 hours of agency time] Some of the information provided in these classes is arcane, unnecessary and won't be retained by most people. Each of these classes should be scrutinized to distill the information down into what is most needed and most likely to be retained - with the goals of making the trainings more effective and saving agency time.	In thinking of partnerships in a voluntary context, I'm concerned for EPA's voluntary programs which have all been targeted for defunding in FY18. Most (all?) EPA voluntary partnerships rely on a solid business case to demonstrate the economic effectiveness of the targeted actions - and, of course, those actions also yield positive environmental results. However, there are always barriers (uncertainties, lack of upfront capital, simple inertia, etc) to convincing folks to take those actions which will save them money over time and yield positive environmental results. When EPA can bring something of value to the table (e.g., funding, site-specific tailored technical support), we can sometimes help overcome those barriers. EPA's voluntary programs need MORE funding not less. Most businesses like (or are neutral) about our			EPA needs more sophisticated teleconferencing options: The EPA organizer of a large group conference call should have the ability to mute all lines and/or drop any lines which place the call on hold. Separately but related, why do phone lines placed on hold play music? Can EPA drop this feature?	

AMERICAN OVERSIGHT

994	993	5/15/2017	INTERNALLY:The process for the overnight use of a GOV should be electronic and streamlined. Leadership sign off should be electronic, like leave slips. If the GOV is being requested for a meeting that is 4 hours away(in 1 direction) what is the purpose for explaining why the use of the GOV is in the best interest of the government? The request form should be adjusted/edited so that the data supplied is clear and needs no further explanation. EXTERANALLY:The changes to 40 CFR Part 170 need: Time extension for outreach and compliance assistance with impacted stakeholders; financial resources dedicated SOLELY to the states--STAG funds for materials and training & associated expenses EXTERNALLY: The proposed changes to 40 CFR Part 171 need to be eliminated, and could be replaced with: financial STAG resources for tribes & states to evaluate their programs, identify areas that need adjustments,	Program results should be reflective of the program--and should be agreed upon with partners. Largely, program results are determined in at the HQ level. Requests for comments are made--but it is rare to see the comments and suggestions made actually put in place. Hours & hours are spent developing comments on proposed grant guidance, measures, reg changes, etc. yet, rarely do we see the huge efforts made reflected in the final product. Field staff are in a very helpful position to provide valuable data and perspective--as well as what will work given the present status--and yet, they are largely unheard. Preferably, there'd be a few measures that were agreed upon; versus a slew of measures that are not well understood, and may be subject to misunderstanding. Those on groups that develop program measures for results should be	To attend meetings or events with stakeholders--tribes, states, industry, etc. we are required to provide an agenda 2 weeks in advance. MOST times, we receive the meeting notice a week or even a day before the event--and as a result are not able to participate. This hampers communication, effective partnerships, and fails to support effective grant and cooperative agreement management. Additionally, in most circumstances--these events provide valuable professional development opportunities to EPA staff--which are nonexistent and have been the last 10 plus years. It's impossible to maintain effective partnerships when you're not allowed to interface with partners. It's also hard to provide timely and pertinent program support and guidance when attendance is not permitted at related informational meetings and trainings--that are no cost to minimal cost for attendance expenses.	Web site is very hard to navigate for the public, partners--such as states and tribes-and stakeholders. The web page is identified as a resource but it's hard to navigate and is not well targeted to various user communities. Not all users have effective broadband access, and have to use cell service. We need to ensure that web pages can be viewed by mobile device users as well as those with access to other hardware options. Many stakeholders still need and want paper copies of guidance materials. Despite requests--largely, other formats of very needed compliance & outreach materials were deemed unnecessary. This is NOT the case in the field, however, nor the request/perspective of	As mentioned in Q 1, above, the overnight GOV process is cumbersome, and inefficient. For stakeholder outreach--electronic resources are great--but have to be tempered with the stated needs of deeply impacted stakeholders--tribes, states and the regulated community. Electronic efforts can be very beneficial/wonderful--but must reflect the communications capacity of various parts of the nation. The efforts themselves need to be clear and targeted--ideally, stakeholders would be queried as to what they'd USE and the FORMAT that works best for them. There seems to be a lot of interest in developing "apps" but not everyone has access to "smart" technology--and if the app is seeking input or	As mentioned in Q 3 above, there are opportunities to align activities--and in the past, that was accomplished to varying degrees, but the last 6 years or so--it's been impossible to attend events where mutually beneficial endeavors took place. Ideally, each EPA office identifies their areas of direct responsibility and those that are "peripheral"--and identify who are primary as well a possible peripheral partners, as well as the status of partnerships. It's likely that many partnerships that had been established in early 2000, are no longer--or are attached via a thread.
995	994	5/15/2017		Overall Issue: Current OECA program and individual performance measures are not designed to encourage and support state compliance actions or joint EPA-state partnerships. 1] Change OECA program measures to incentivize state collaboration: A] Start counting as a success all state and federal enforcement and compliance assistance efforts (for delegated programs). - Current measures** can act as a deterrent to effective state partnerships. [**current measures of program success only measure ???formal??Â federal enforcement actions. No consideration is given to state actions nor progress from any compliance assistance efforts.] -Do not prioritize and ???count??Â formal federal

996	995	5/15/2017	I just started December 2016. Getting access to different programs has been challenging, but I do understand the need for safety.	I do not have an issue right now	More staff, but that cost money.	N/A at this time for me.	I am sure there are. I am just trying to get up to speed on what I need.	I do not know this one yet.
997	996	5/15/2017	For all of our actions that are required to be published in the Federal Register, we should consider if the benefits of publishing there outweigh the costs; if not, we should revise our laws/policies so that we may publish on our website instead. The public does not go to the Federal Register to learn about what we're doing, they go to our website. Not only do we pay by line for documents published in the FR, but the process to get things published is burdensome. At the least, we should shorten what is published in the FR and point the public to our website or the docket for further information. For example, when we publish final rules for pesticide tolerances, the FR not only includes the new pesticide tolerances (this is necessary) but there is also a narrative regarding the human health implications of the new tolerances. This second piece is unnecessary to publish in the FR; it requires rewriting/summarizing information that is already found in our human health risk assessments (this can lead to inadvertent mistakes when		When many people work on the same types of actions, inconsistencies can easily occur without staff realizing it. There should be an easy mechanism for the regulated community to bring these inconsistencies to our attention, be it a standardized electronic form or otherwise. The inconsistencies should be addressed internally as soon as possible, the person pointing out the inconsistency should be informed of the action taken to correct that inconsistency, and the decision should be electronically stored somewhere for future use.

	A	B	C	D	E	F	G	H
998	997	5/15/2017	Having worked under several Administrations, I regret to note that this is thus far the most dysfunctional political team that I have worked with in almost 15 years with the Agency. Any change in administration offers the opportunity to infuse new ideas and energy into a bureaucracy that tends to turn slowly; however, rather than embracing this opportunity to work with career staff to evolve the Agency from the ground up, the Trump political team seems to prefer a more insular approach whereby Administrator Pruitt and his staff converse primarily with fellow politicals and external stakeholders instead of generating dialogue and sharing ideas with career staff. This is increasing a frustrating environment to work in and across multiple program offices, I continue to hear the refrain that this Administration does not care to seek input from career staff and indeed, actively keeps information from career staff. This survey is a start, but far more impactful would be if the Administrator and his political staff started actively	Well, I'm not sure how much control the Administrator or members of his team have over Trump or Mulvaney, but a good start would be to stop threatening budget cuts that, if enacted, will degrade both existing relationships with states, tribes, local communities, the private sector and EPA AND expose the American public to health threats.		Offer our hardworking support staff -- especially our contracting officers-- a more appealking career ladder here at EPA. Especially with looming budget cuts, we'll increasingly rely on contractors and we need to retain knowledgeable and experienced contracting professionals. Without offering attractive compensation for their expertise, our talent will continue to leave for other agencies.		Please for the love of God drop the patently false narrative about the existence of anthropogenic climate change being up for debate. It's not -- the evidence is irrefutable and now it's up to entities like EPA to show leadership so that future generations can enjoy the same stable environment that we have now. To say claim anything else makes you either a liar or a fool or both. We need all hands on deck to address climate change and the Trump/Pruitt team could make an indelible mark on history by offering a conservative solution to climate change -- one
999	998	5/15/2017	Timekeeping requires a tremendous amount of time from staff, managers and timekeepers. While our flexible work schedule is a big benefit-and one we should keep to ensure EPA remains an employer of choice-we need to ensure the electronic systems that support our work schedules are as efficient as possible. Suggest evaluating possible improvements.	Working with each state individually on where they can best use their limited resources and where EPA can be of most assistance-this will vary by state and by env program. Then clearly communicate to state and EPA staff and the public what our respective roles are. Local communities-especially small community drinking water and wastewater systems-joint effort with EPA, state env and health agencies, USDA Rural Development, HUD CDBG, engineering organizations, developing operator training)possibly thru Brownfields Job Training, community colleges, other job training programs incl in urban areas to provide jobs to the unemployed) and private financial resources to evaluate community needs and develop cost-effective solutions. In some cases it could be reducing water consumption to allow a discharging lagoon to	Clear, easy to access education information about water and energy conservation, proper pesticide application, the importance of proper renovation of lead paint (impacts of lead exposure from paint and lead mine waste on children), protecting water quality-what citizens, cities and farmers can do, flood and/or drought preparation for citizens and communities incl dw and ww infrastructure, pesticide worker protection standards for immigrant farm workers. Basically what everyone can do to protect the environment.	Re-evaluate the many small grant programs and eliminate or consolidate to larger grants. Grants management requirements at EPA are very burdensome for the recipient and for EPA staff that manage the grants so very small grants have more transaction costs associated with them than the value of the grant. Unfortunately some grantees don't follow the rules which requires us to document and ask for grant funds to be returned to EPA. Conduct state oversight in a more streamlined focused way acknowledging good work of states and recommended improvements without lengthy reports (unless there are significant recurring issues).		States already utilize our resources on technically/policy challenging permits and inspections/enforcement cases where states have not had success or where "politically" state cannot take an action. In addition, in each state there are aspects of delegated programs where states cannot do the work due to resource constraints and rely on EPA to do this work. This needs to be a continuing coordination/communication effort with the states as both state and EPA budgets are constrained.

AMERICAN OVERSIGHT

	I
998	
999	There are many ongoing communication/coordination efforts between regions and states that are best practices that should be shared and continued. EPA HQ could work with ECOS to poll the states for their perspectives on what works/doesn't-what could be built upon and shared.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1000	999	5/15/2017	The importance of the administrative function cannot be underestimated. It is much more efficient for there to be administrative staff finalizing (formatting/packaging) and mailing documents then to have staff at a much higher pay grade spending their time doing this work.	Use of technology and holding parties accountable. States: It is necessary for EPA to insure states are accomplishing their objectives and it is imperative that EPA hold states accountable. It is likely that EPA may need to partner with them in order to meet objectives but there must also be an oversight role to ensure objectives are met.	more interaction, education and information		technology: use of electronic reporting, electronic communication It would require states to use technology more/better. If the states use technology more we can use technology more. Their lack of use of technology can at times impact our use/efficiency.	
1001	1000	5/15/2017	Please re-evaluate employee's grades every 3-5 years. All too often at EPA someone is promoted because they are doing a great job then they retire in place. There are many highly graded employees doing low-graded work now, but our culture doesn't force them to accept lower salary for the easier work. Why is it once-in, always-in? You should continually earn your check. Managers say that only an employee can ask for a desk audit. We should change that. Managers should be able to show that their employee is not performing at proper GS level and downgrade them. In all of my years I have NEVER seen anyone downgraded.				Yes, please. Please evaluate both of the systems OCFO has purchased in recent years - PeoplePlus and CONCUR. They are both reducing productivity greatly.	
1002	1001	5/15/2017	It has been extremely difficult doing my job effectively because the Shared Service Center has been very shorthanded over the past few years. We work as partners but I would say that their ineptness and lack of staff has really been an obstacle here in the Region. Also, I see a huge problem from a technology standpoint. I feel that the more basic the systems are more cost-efficient, effective, and easy to implement and learn. We keep spending money on newer, more complex technology before the field can even learn and become proficient at the older technology. This has been a constant problem since we went to One EPA. Currently, FPPS cannot talk to PPL+ which has caused numerous problems in pay, leave balances, etc. This adversely impacts employee morale and productivity.	Not applicable to what I do...	Not applicable to what I do...	Adding qualified staff at the SSC levels would help us do our job more effectively and timely. This has an indirect effect on the morale and productivity of the technical staff in the field.	I feel that the more basic the systems are more cost-efficient, effective, and easy to implement and learn. We keep spending money on newer, more complex technology before the field can even learn and become proficient at the older technology. This has been a constant problem since we went to One EPA. FPPS cannot talk to PPL+ which has caused numerous problems in pay, leave balances, etc. This problem adversely affects the morale and productivity of employees in the field.	Perhaps streamline IT and HR systems so that every agency uses the same. For instance, not all agencies use the same payroll systems, the same HR LoB systems, etc.

AMERICAN OVERSIGHT

	I
1000	LEAN
1001	
1002	Not personally. However, we should be looking at other agencies to see what works best. I think we need to slow down with the constant technology changes here at the EPA. They are expensive, difficult to implement, and not easy to learn. I'm not a fan of making change just for the sake of making change. If it's not broke, then don't fix it. Not a fan of the changes implemented since One EPA. Don't like HR LoB at all. What works for other agencies??

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1003	1002	5/15/2017	- Prior to an inspection two and most likely three documents (HASP. car reservation and TA/over-night-form) have to be generated and signed by a supervisor. It would be nice if this was one system with one signoff. -Other than the signoff sheet, Evalu	Shared data (easily accessible) would be the most important first step.	The Compliance Assistance Teams should be transitioned to be Customer Service Staff.	More image analysis and data mining should be implemented in targeting facilities for EPA attention.	When you want to popularize environmental ideas the media should be a major player. EPA should be regularly creating films, videos, and articles for print.	An entire liaison corps should be formed and imbedded into other federal agencies.
1004	1003	5/15/2017	I don't have anything to share on this one.	Ensure STAG (State Tribal Assistance Grants) funds are monitored better (progress reports are submitted, show progress, etc.) and reduce funding for non-performers. Give more money to outstanding grantees. State formulas for funding don't take in to consideration successful progress or lack of progress on env. outcomes.	Follow the EPA R10 example and have a field office in every state of the Region. Get more EPA folks out to the local state/tribe more frequently this way to assist technically and monitor progress. Field office staff are paid less in locality pay, generally, and have lower travel costs to visit grantees so are a cost savings to the Agency.	I think the field office model would reduce costs and be an efficient way to get env. protection improvements at the local level. I think we need to focus our FTE and outreach on the Statutes (Clean Air Act, Clean Water Act, Safe Drinking Water Act, CERCLA, etc.) we have to enforce and implement. This work should be primary and is our mission from Congress. Other work and programs should be secondary to this work. If an employees work cannot be quantified and measured and tied to our core Statue work then we need to rethink that position and its importance/relevance. Reassign folks in to our core mission work fields - permit writers, inspectors, compliance assistance, grant Project Officers, Remedial	We need to be using some type of email archiving on a daily basis. At least in my Region we have been told not to use this due to some litigation.	Return the State and Tribal Clean Water Act Section 319 to the USDA's NRCS EQIP program. Does basically the same thing and the NRCS agents are better educated and trained in agricultural practices and are more locally situated than EPA staff and project officers. We've been putting a lot of money out thru states/tribes under the CWA Section 319 without much water quality improvements to show for it. Time to stop this program.
1005	1004	5/15/2017	5-tiered PARS system for rating employee performance -- this system has too many categories and creates extra work for supervisors, with no benefit to the organization. solution: change PARS to a 3-tier rating system -- minimally satisfactory, fully successful, exceeds expectations	a) set annual targets for EPA, states and tribes to conduct "X" number of process improvements b) provide funding (beyond the Exchange Network grants) for modernizing and streamlining our products and services c) expand formal and informal agreements that allow use of citizen science data to compliment core program work (e.g., long-term water quality monitoring to show improvements)	states and tribes: invite early engagement and input on EPA priorities, goals, objectives and annual commitments. States and tribes: identify joint priorities and work together to achieve results have dedicated EPA liaisons an regulated community: fund EPA Portal that allows more business and services to be provided on-line public: increase transparency of EPA data, information and gather public feedback on EPA priorities, then share results with public before and after decisions are made	set goal of transferring and replicating "game changing projects" that modernize and streamline the way EPA, states and tribes deliver environmental protection. Fund good project ideas and then get other EPA regions, states and tribes to adopt them, where applicable, to realize the benefits.	expand use of software to compliment responding to citizen inquiries. e.g., analyze the most routine questions that EPA receives, then purchase and use software that searches for key words, finds solutions on internet, and provides email responses to these most common questions for EPA	look at success of HUD-EPA-DOT partnership for sustainable communities - ability to leverage resources in defined geographic area and achieve more significant/meaningful results

	1007	5/15/2017		-Allow PCB permits, which EPA has to issue, to be delegated to the state when a concurrent RCRA permit is required. -Consider changing the regulation of commercial Subtitle D landfills on tribal land ??? make EPA permitting and enforcement applicable to	Don't filter climate change science; maintain the integrity of peer review consistent with established practices in academia.	Adopt regulatory changes (already in draft at OCSPP) for PCBs in building materials (found in tens of thousands of buildings nationwide) to authorize their use so their existence doesn???t trigger immediate non-compliance and potentially billions in extra cleanup costs.	Reconsider RCRA BDAT determinations that require incineration (eg. PCBs) vs other technologies that are less expensive and still effective and do not create as significant air emissions or energy use	
1008								
	1008	5/15/2017	My regional supervisors are fabulous. The Oklahoma Flat Earthers (not geographically diverse, by the way) in charge of EPA now are preventing us from doing our job efficiently and effectively. Your lack of qualifications, disrespect for science, and industry conflicts of interest (and need for so many recusals) are truly appalling. EPA will be sued for everything you try to do and will lose. In the meantime, we will be bogged down with all these distractions from our job protecting humans and the environment. Pretty hypocritical for you to complain for years about EPA's mission creep and then to state publicly that Pruitt is going to bring back jobs. Please don't sully EPA with your immoral campaign.	Stop calling regulations that protect people and resources "job killers." It's dishonest and is not based in economic fact. Stop focusing on bringing back coal mining jobs - it's dying because of market forces, not regulations. Read the real (peer reviewed) economic statistics. While you're exercising mission creep by trying to bring coal jobs back to coal country (which is anathema to a free market ideology), let's bring the buggy whip industry back to upstate New York and the whaling industry back to Nantucket.	We can beef up our enforcement actions against polluters and not back down to the states who do not want us enforcing in their jurisdictions. States often do not have the power or the will to enforce against their industry friends, as you well know. Read Cynthia Giles' recent op-ed on why we cannot simply leave the enforcement to the states. She is spot-on. Region 5 EPA tried to be too nice to Michigan and the people of Flint suffered and will suffer for years. How did Michigan's GOP ideologues serve their citizens there?	STOP denying human-induced climate change. This will reduce costs by orders of magnitude in the long run. You are conservatives and should abide by the PRECAUTIONARY PRINCIPLE. Remember how Big Tobacco tried snookering America for so many years long after we all knew that smoking causes cancer? Big Oil uses the same play book and it's shocking and embarrassing that the EPA is now led by non-scientists who are so easily snookered by Big Oil. If you were scientists, you would understand that we do not need to have all the answers to understand what can and should be done about climate change. Example: 9 out of 10 oncologists tell a smoker he has lung cancer and recommend the patient stop	How will we know if you allow millions of $ to be reduced from our research budgets? How will we know if you fire real scientists from the advisory boards?	--Finalize the CERCLA 108(b) regulations to avoid future superfund sites by adopting strong financial assurance requirements for hard rock mines. Level the playing field so that the American taxpayers don't foot the bill for future cleanups. Do not make t

1009	--Accounting for the Social Cost of Carbon is extremely important. You cannot ignore these costs. They are real and should be paid by the polluters -- this will reduce costs in the future. It's breathtaking that conservatives do not accept and apply this
1010	The purchase card program is an effective tool for reducing the costs of making purchases. It should be expanded as much is logistically possible.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1011	1010	5/15/2017	The Working Capital Fund (WCF) needs streamlining in some areas. The WCF is good for bulk purchases of items such as phones or computers. It does not work well for acquiring contracted services. In some cases, it takes many months to make contract modifications before a contractor can come on board to assist with a project. Once a mistake in billing is found, it can take over a year to correct the error. In one instance, the products described in eBusiness are out of date and misinform potential users of the current products available through the contract. I would suggest that the reason for these problems is that there are not enough resources (ie, qualified staff) dedicated to these activities. It is not so much that the procedures are no good, although significant streamlining might be in order, as there may not be enough resources to do the work in a timely manner. In any case, the WCF acquisition practices are a worthy of the Agency's attention.	States need funding and training, particularly for enforcement and compliance activities. State inspectors are not well paid and they have a fairly high turnover rate. One suggestion is to insure that enough STAG funds are made available to state environmental programs to supplement states' appropriated funds. A suggestion regarding training is to ensure that state environmental agencies prioritize training, in particular enforcement and compliance training, in their Performance Partnership Grant Agreements. This will help to put training front and center. That will make it easier for EPA and states to partner on these training needs. There also needs to be more collaboration and sharing of training ideas and resources between EPA and the states to better leverage resources and to help states utilize their own		One opportunity would be to develop and utilize more virtual classroom training. We have tools for doing this, that is Adobe Connect. Virtual classroom training can reduce cost of travel and other expenses. For instance, it can bring in instructors from different locations and provide instructions to students in multiple locations without everyone being in the same room. It can go a long way to simulate a classroom experience and use a wide variety of learning techniques. We do need some better equipment such as microphones and digital cameras, and training in virtual classrooms. This could be of assistance to both EPA and states.	I would strongly suggest that EPA be allowed to purchase Apple iMac desktop and laptop computers -- equipped for our LAN system -- instead of the clunky Dell products that we now have. They operate much better and are much are more reliable. EPA also has to improve the way it plans for its IT equipment needs. It takes years to get new and up to date equipment. We are often years behind the technology curve before new equipment arrives. We get new operating system upgrades before we get new equipment, which is extremely inefficient. In other words, better (ie, Apple products) and more efficient hardware acquisitions and roll outs.	It is not clear how much realignment is needed. The states have program delegation and authorization. One problem however, is that many of these agreements are old and out of date. They do not serve much purpose anymore. We could embark on a program to revise these agreements to better reflect the abilities of states to conduct their environmental work. On the other hand, this should not be an opportunity for states to throw off EPA oversight of their programs. It could be an opportunity to improve EPA oversight of state programs and ensue that EPA is doing the right job. It should
1012	1011	5/15/2017	- EPA's historic failure to invest in standardized record-keeping processes (especially for electronic records and non-records) creates an incredible back-side burden on employees who must respond to FOIAs or e-discovery requests. - As a hiring official,				- Provide supervisors with a one-stop shop for personnel information (e.g., current PD, past performance evaluations, prior award justifications and amounts, promotion history, resume, etc.) about their employees. Much of this information (though not all

1013	1012	5/16/2017	Filling out time cards prior to finishing the pay period is inefficient. It creates mistakes that then have to be fixed later on. Time cards should be submitted after the pay period is over, or at least, on the last Friday. Our travel system, Concur, is very inefficient. On top of that, we are required to have a TA for any type of expense. So if I drive somewhere, and have to pay for parking, to get reimbursed, I have to have a TA, and the contractor gets a fee. The contractor fee is likely more than the cost of parking. The end result is that I don't request reimbursement for many travel expenses. We ought to go back to a petty cash fund for small travel expenses.	I feel like we do a great job of this already. More access to events that they all attend, which requires travel and training money would help. If we can't attend the events where they are talking about the latest in cutting edge technology, then we will not be keeping up. Also, the agency does not reimburse for memberships in professional organizations. So our membership in those organizations is low. There should be someway to allow employees to be more connected to the professional organization that others in the field belong to.	More visibility and access. That means the ability to get out of the office more, because face to face interactions are some of the best.	Filling retirement vacancies. We have a large percentage of people who are eligible to retire. Bringing in young people with great enthusiasm and energy, but working for a fraction of the cost, is a great way to continue our mission at a reduced cost.	Finding a better balance between cyber security and efficiencies would be a good start. There seems to be a great deal of inefficiencies built in to our IT resources that really slow the system down and make it difficult to work with. We have a number of technologies people don't use because of the inconsistency, lack of dependability, and difficulty built into them. I feel like the rest of the world is debating whether to use Google, Windows, or Apple and we are stuck in IBM.	I feel like we do a pretty good job of partnering with other agencies and states. One example of an advantage the current system gives us is grants. There may be a number of grant programs for water and wastewater systems from different agencies. And some may think this is a duplication of effort. But every program has its own rules for it own reasons. Having different programs allows the utility to find the grant program that works best for its situation. If there was only one agency with grants, if it didn't work for you, you would be out of luck.
1014	1013	5/16/2017	I have no issues with our requirements, procedures, or processes.	Good lines of communication are the key to success here. Regular conferences addressing specific topics as well as an internal EPA Champion for a given area.	Again, good communication and timely response to issues assigned are key to good customer service. Also, providing a go to person within EPA for the various groups is vital.	Provide more opportunities at the GS-14 level. Currently there is a gap at the GS-14 level restricting highly qualified GS-13s from advancing to supervisor GS-15 positions.	Continue to develop and use virtual meeting technology beyond teleconferencing that the rank and file staff can use.	The big issue here is that we are not aware of what other agencies actually are doing or who to contact. Having an EPA Champion for specific interest areas who know what other agencies have and who to contact would provide a necessary link between the agencies and states.
1015	1014	5/16/2017	In general, the grant award process needs to be streamlined. There are far too many steps and far too many oversight tasks.	A simplified process for awarding funds to these organizations.		See answer to question 1.

1020	1019	5/16/2017			Clearly defining the roles that the federal government, states, tribes, local communities, the regulated community and the public play in environmental protection could allow each entity to do their jobs better. With clearly defined (and agreed upon) roles, a state would know when to seek input etc. from a federal agency, local community, etc. Likewise, the regulated community would know what their responsibilities are to meet state requirements, federal requirements, and their responsibilities for the public.	At EPA Headquarters, have all staff located in the same place. Staff are now split between Potomac Yards and Federal Triangle. Time is wasted traveling back and forth between locations when face-to-face meetings are needed. Housing all of us in the same place would eliminate the need for a shuttle service. Potomac Yard is a rented space; moving those staff to Federal Triangle in a GSA operated building may also save money.		Sometimes there is a sense of hostility when multiple agencies are working together. People spend more time focused on maintaining their territories rather than collaborating to meet a common goal. I'd recommend taking actions to foster a "One U.S. Government" attitude with our federal partners. We need a similar understanding with states (i.e., we all have the same interests so let's work together). By doing these things, we lay the ground work for collaborations, sharing responsibilities, and accomplishing more together.
1021	1020	5/16/2017	The Concur Travel system is very challenging, and a more streamlined system or better support would be extremely helpful for travelers. The chain of command for doing external work is highly burdensome, as all external messaging requires lengthy internal deliberations. This stems from the political climate always surrounding EPA. Working harder to highlight the positive impact our agency makes, not on "the environment" (which many take to mean useless worms and the like), but on measurable human health impacts would go a long way. Working to strengthen the message that EPA is realistically more of a "Human Health Protection Agency" than anything else would ease much of the burdensome chain of command that all messaging currently goes through. The threat of constant shutdown is highly disruptive, and prevents us from doing our job efficiently.	My work is primarily with Tribes (and local communities), and Tribes benefit greatly from partnering with EPA. EPA is crucial in offering technical expertise and helping Tribes to grow their capacity for managing environmental statutes in the best interest of the Tribe (with Tribal members being some of our most vulnerable citizens in the United States). This crucial Federal Trust responsibility can be supported with more resources, especially in our Tribal and Grants Management programs. Tribes suffer when their Project Officers and Grants Management Officers are juggling 15 different grants, with limited resources and support systems. EPA is also crucial in working with local communities. We are uniquely positioned to bring other agencies to the table, including Federal, State/Tribal,	The biggest obstacles to providing better customer service are: technology, workload, and levels of review: - EPA technology is perpetually 15 years behind the private sector. EPA could provide much better customer service with better platforms and technology to interface with the public. This includes higher quality website, the ability to use social media, and hardware such as tablets to support our challenging work in the field. - In order to make this effort successful, staff must have time to spend on prompt customer service. We also must have adequate resources in our tech support group, which is often overwhelmed at their current staffing level. - Currently, EPA's outward facing message is tightly held, because of fear of backlash from our communication efforts. This hampers us in "telling our story" about the meaningful work that we	EPA can prioritize and focus our energy even more on the most vulnerable communities that need our assistance, in order to truly achieve "environmental protection for all Americans". Our Environmental Justice program has made great strides in identifying communities that bear the greatest environmental burdens, and identifying opportunities for our various programs to collaborate and share resources in working with those communities. Our greatest opportunities for efficiency is strengthening our collaboration and efforts in our most vulnerable communities, where our work makes the greatest impact. This must be paired with continued work at the	EPA needs support to access and use existing technologies - for example, all field staff should have field phones and tablets, to assist with complicated site assessments. These technologies should be streamlined for efficient record management, so that all field notes are captured in the record system. We need additional GIS and tech support for these technologies as well.	EPA plays a unique role in protecting Americans from the effects of pollution, and ensuring that all Americans are able to raise their children in a healthy environment. Even where EPA has shared responsibility, our expertise and mission are unique, and need to be supported and continued.

AMERICAN OVERSIGHT

	I
1020	
1021	We need a better record management system that is much more streamlined for staff. Something as simple as an option to "save as record" rather than "save as", that brings that document into the records management system. The same is needed for our email system. This would make our response time to FOIAs and to other inquires much faster, and would create huge efficiencies in staff time, with associated cost savings.

AMERICAN OVERSIGHT

1022	1021	5/16/2017	Unify and create universal procedures for all sections instead of each section having their own individual procedures	need better communication with everyone involved. Especially better written permits that can be enforced upon.	fine tune processes to prevent enforcement actions from dragging on	close smaller offices and in-bed them with there state counterparts.		get everyone on the same page with better communication and enforcing the regulations in a consistent way. Permits need to be written clearly and the amount that is emitted should be reduced as new technology becomes available.
1023	1022	5/16/2017	The continued hiring freeze imposed by the Administrator and the limit to total EPA employees of 15,000 imposed by congress's CR prevent me from doing my job efficiently. Myself and many of my coworkers are covering the duties of multiple employees because we can not backfill current vacancies. The Administrator should lift the hiring freeze and request congress to remove the employment cap for EPA. Also, the Administrator should request an increase in our annual budget from congress in order to fill current and future vacancies.	EPA's annual budget should be increased so that we can distribute more grants to states, tribes, and local governments. I work in a regional office, so I have observed first hand and I have had conversations with our state and tribal governments in which they expressed the need for continued and increased funding for state programs. Many positions at many state governments rely solely on EPA funding. Without continued and increased funding to state governments, environmental programs mandated by federal and/or state laws will not be implemented, threatening the local health and environment of our states and tribes.	We need to increase funding for our Regional offices. Regional offices are the front lines of customer service for the public, state, and local governments. Headquarters develops and establishes federal rules and regulations. But the implementation of these rules and regulations are carried out by EPA Regional offices and state governments. Without sustained and increased funding to Regional offices and states, laws, rules, and regulations will not be implemented and enforced as efficiently as possible.	EPA should stop publishing all State Implementation Plans (SIP), Consent Decrees (CD), and Memorandums of Understanding (MOU) in the Federal Register. This is a waste of limited EPA resources and it makes the number of publications in the FR by EPA seem large relative to other federal agencies. These orders do not need to be published in the FR to have the force of law if they are violated; the existing environmental statutes grant EPA its authority to implement and enforce orders. Further, the amount of FR publications from EPA makes locating relevant national rules and regulations on Regulations.gov very difficult. By reducing FR publications by no longer publishing orders, the	EPA's adoption of newer technologies, such as shorter refreshes of IT resources like laptops, tablets, and smartphones will continue to enable us to do our jobs more efficiently. The Agency's accelerated adoption of newer IT hardware and software should continue; this has greatly improved our efficiency. The Agency's continued development of online databases for information submission and retrieval by the regulated community should continue and should receive more funding. Online database services reduce time and costs for the regulated community.	Interagency committees that coordinated national programs between federal agencies should continue to be utilized to increase collaboration between agencies. Further, Agency advisory boards and panels, such as the BOSC and SAB, should continue to rely on impartial researchers from academia to advise EPA regarding the most recent and relevant scientific consensus on environmental topics. Industry representatives have no place on boards or panels that advise the Agency and should not be considered for these positions due to their clear conflict of interest. Also, academic researchers that have

1024	1023	5/16/2017	Multiple requests for reports from management. Requests for new reports are becoming more frequent and are duplicative efforts to compile information readily available in existing reports and systems. Additionally, Management doesn't seem to be aware of the information contained in existing reports, it is often difficult to get clarity on the information sought, and there is an unwillingness to utilize Agency systems and tools. All Senior Leaders should be aware of how to use Agency reporting systems and should be facilitating adopting the Agency technology. Additionally, if there is information they are seeking, it would be infinitely more helpful if it was purpose and use could be communicated to those who need to compile it. There is likely a better suggestion for how to gather that information from the people who use it daily.	We need to better incorporate our external partners' business cycles into how we prioritize our activities to capitalize on efficiencies. Additionally we need to take a risk based approached to assessing organizations capacity to achieve the desired results.	Encourage employees to take an actual Customer Service Training. One that focuses on excellent service delivery and effective outreach to basic stakeholder groups. Everyone who interfaces with individuals outside of this organization would benefit.	We need to improve the way technology is utilized within the Agency and improve EVERYONE's competency with basic programs and existing IT Solutions. Additionally, there needs to be better communication of the available IT solutions, their purpose, and how to deploy tools in the Organization.	Improve the use of SharePoint and the Power Business Intelligence Analytics Tool. Information should be readily available online and that functionality would greatly improve HOW all employees of the agency interact with the information. Easy data access and understanding encourages users to use the platform. This would also go a long way to eliminating some of the "report" requests from Senior Management.	It would be beneficial to identify common lines of business across agencies and the common activities undertaken or common stakeholders. There are likely efficiencies that could be gained by finding a mechanism for sharing information across agencies more effectively. This type of collaborative approach would aid in streamlining activities the Agency and/or external stakeholder is responsible for, as well as developing a more effective and efficient workforce.
1025	1024	5/16/2017		Create a training center. Have a drinking water system and a waste water system there.		fully funding SDWIS Prime. 1026	1025	5/16/2017	Thanks for soliciting input. Here are a couple unproductive processes that could be improved: 1) Reduce the number of mandatory e-trainings that must be taken by EPA employees each year. Staff must take 5-8 of these trainings every year. For some trainings, like security awareness and ethics responsibilities, annual training for all staff is warranted. For others, e.g., Working with Tribal Governments, details on Continuity of Operations procedures, records management, IGMS (grant system) Rules of Behavior, the interval could be changed to every two years and/or the number of staff required to take the trainings could be reduced. AT 15-30 minutes per training and thousands of employees, the cumulative time savings would be significant. 2) Make correspondence with the public more streamlined. Letters and requests for information come into EPA from the public on a daily basis. When these		Programs could work with the Office of Grants and Debarment to further encourage multiyear grants for states. Some states and regions do this now in some programs. It's likely that more could productively do so. Managing multiyear grants can save effort over issuing single-year grants. We shouldn't force the practice on states, but could do more to highlight its benefits.		Continue the current trajectory (in water programs) of greater connectivity of related data systems and greater use of geospatial data to inform and describe the work of EPA and the states/tribes.	
1027	1026	5/16/2017	Decisions on administrative software acquisitions are made with little input from the actual end-users of those systems. A desire to save money on the front end of the process often results in the need to change our business practices to accommodate shortcomings of the software systems, resulting in inefficiencies, wasted staff time, and reduced capabilities. Involvement of the most-impacted users in advance and consideration of long-term costs as opposed to just acquisition costs would help prevent or mitigate the damage from these decisions. Increased demands on researcher's time by accretion of administrative duties is having an impact on productivity and morale. While each new requirement for reporting, documenting, accounting, etc., may have small impacts in isolation, the cumulative impacts are large. Review of the necessity of each new administrative burden requirement and assessment of whether administrative support staff could accomplish the goals

1028	1027	5/16/2017	There are not enough FTE's at our Division to effective do the work that is only increasing in the admin area. The work has to be parsed out to the scientific staff, which takes away from completing the mission of the research.	I think more communication with the Regions who are in the position to communicate and partner with the states, tribes, local community and private sector. I would say that partnering with the tribes would be an area where our division could benefit.	Improving the connection between the Regions and the program offices	Untapped opportunities would be taking a better look at the EPA's administrative duties at all levels.	I think that every time there is a change in leadership at any level, the new leaders want to change effective programs to be their own ideas. This often results in doing away with a good program and instituting a bad program. This is done routinely so new leaders can make a name for themselves. This is not a good thing.	We can barely accomplish this within the EPA, let alone trying to do this with other federal agencies. That being said, there are a number of best practices at all levels of the EPA that could be shared with the other agencies. One that comes to mind is the Environmental Management System requirements for all agencies.
1029	1028	5/16/2017	Shared service center and HR processes and functions must be addressed. Processing recruitments, classifications and employee services is broken. Regions and NPMs must have trained HR professional that can work with SSC and support managers and staff with HR processes. PSB is overwhelmed and security clearance process for low to mid risk needs to be addresses -- my EPA review was more intensive then when I was cleared for DOD and DOE clearance - not sure what it is we are protecting against within EPA given most employees are not dealing with sensitive and classified materials. Regions should consider consolidation of divisions - the recent reorgs have resulted in substantive increase in 1st line supervision responsibilities as a result of not consolidating Divisions (SES cadre) and Branches and associated overhead to meet supervisory ratios. The result is supervisors do not have the time needed to both supervise 14-20 direct reports and maintaining both programmatic and national program	Invest (underinvested) and work with States to fully adopt delegations and capacity and develop and conduct effective oversight for State grants and its program performance with reinvest and focus on EPA resources once this is done to those only EPA can do -- i.e. RCRA's 2020 vision. Revise OECA goals to avoid generating orders and cases for the sake of a GPRA or ACS goal that the EPA program office and/or State (which it should be involved as a stakeholder) then becomes a long term "mortgage" that the program and states do not have the resources to support.	EPA needs to take a more external focus on its constituent services and a more moderate view of risk mitigation in dealing with the public and regulated community. EPA is to internally focused and risk adverse to the point of being ineffective in being adaptable and responsive.	Restructure SES cadre and consider activating mobility requirements to increase bandwidth and reduce risk adversion, search for perfection, and inability to tolerate or celebrate failure has in my view overtaken EPA's SES cadre and stymies and discourages staff and manager innovation and effectiveness	Under resourced for adequate ADPE gear for employees. Computer and gear should be renewed every 3 years versus the average now of 5-6 which causes lots of downtime and lost productivity. Expand and explore use of mobile work space - improve web based tools and support	

AMERICAN OVERSIGHT

	I
1028	I mentioned EMS in the previous answer which I think is a great example of a best practice for the EPA. Our program and strategies could be shared among other agencies who I am afraid have no idea of what EMS is, even though it was started in 2003 by an executive order and continues to be a mandated requirement for all government organizations. Another best practice would be in the area of scientific outreach and environmental education. So divisions do it better than others, but there is no money available to really have a worthy and effective program.
1029	

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1030	1029	5/16/2017	I currently serve as an HR liaison for my office and run into issues with staff in the OAES who are not well versed in the various HR process they are responsible. This in turn makes getting my job that much more difficult when it comes to getting a question answered. EPA has in place multiple systems/program that can provide management with pertinent information on how to get this done, but access is restricted or no one knows how to access it. Trainings for the new processes also don't always trickle down to all the right players. having a sharepoint site or something of that natural that all HR assistants, analyst etc can access for instructions, trainings etc would be helpful. Having more streamlined processes move allow things to more and work more efficiently such as having to go through a 3rd party to make changes to the routing in CONCUR slows down the process significantly and is not the best use of the 3rd parties time. Allowing a single POC from the office be able to reach out and make request for routing				Better training on the capabilities of the existing technologies would help in making most processes more efficient, Things such as adopting digital signatures on documents would cut down on the cost of paper and time. Fully informing staff of the capabilities of the various software systems would allow staff to work smarter not harder.	
1031	1030	5/16/2017	Currently, there are two administrative/managerial processes that impact the efficiency of the agency's work. They are: 1. Current Administrator-level decisionmaking regarding region-specific actions. I appreciate that Administrator Pruitt is coming to this Agency with both a jaundiced eye toward its past decisions and a desire to make changes to existing policies and procedures. This is natural and understandable in a new administration. However, I think this desire is being manifested in a disconnect between regions and HQ. At the staff level we have received very little guidance on how the Administrator wishes to implement his vision: the Schnare email and the ???Improved Management of Regulatory Actions??Â memo are all we have to work with, and I think they sow more confusion than clarity. Judging a regional action against these documents to determine whether to involve HQ is a painful exercise that seems mostly to consist of more tea leaf	Comprehensive ICIS code review on a state-by-state basis. Streamline and rationalize ICIS coding so that datapulls can be done more quickly and easily, and provide comprehensive and comparable cross-state compliance data.	This is a hard one. Personally, I strive to answer every call I receive from outside parties within 24 hours, provide the best answer I can at the point of first contact, follow-up in a timely fashion (as necessary), and make sure that the caller knows they can call me back if they need additional assistance. If customer service is an actual issue, perhaps some kind of outside contact tracking system? If an EPA employee receives a call, log it, describe it, and track the follow-up. Use that as a metric in PARS?	I know this sounds silly, but have the maintenance staff fill the paper towel dispensers only 3/4 full. Typically, they're packed so full that when one tries to pull out a paper towel, you end up ripping one and pulling out three additional in the effort. They're checked every week day, so just don't fill the up all the way. We'll surely save money that way. Otherwise, someone smarter than me will have to opine.	See above re customer service tracking software. Also, please, please, please do not cut the budget for FOIA/discovery response technology. OEI is making it work now, but they need more resources and FTEs to allow for quicker, more accurate FOIA responses.	I work in NPDES. From my perspective, we work pretty darn well with our respective states providing review and oversight of state-issued permits. Over the last 4-5 years, we've had a pretty light touch in our review, really only calling out glaring inconsistencies with the requirements of the CWA. Maybe states feel differently? I don't think so, but maybe it's worth asking the States?

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1032	1031	5/16/2017	Cut out some of the bureaucracy, for example, the number of mandatory annual online trainings has risen greatly over the years. Even though, these trainings are often less than one hour to complete, nevertheless, they do cut into our regular work schedules. If at all possible, it would be helpful to cut the number of these trainings.	Periodically, the EPA should reach out to libraries and community centers by posting contact information to the EPA, if people witness or suspect that illegal dumping of hazardous materials has occurred in their area. This is a boots on the ground approach for the EPA to become aware of potential environmental problems. Often, people don't even know who to contact in such situations.	Periodically and internally, the EPA should update its Experts List, and send it out to EPA employees so that they're aware of who to contact when someone calls from outside the Agency seeking specific information. This should especially be made available to the Office of Public Affairs employees because they are often points of contact for outside parties. Also, contact information to the Office of Public Affairs itself should be made easier on the Agency's website for outside parties calling in.	Cut out the middle man. The Agency's decisions should be based on best available science, whenever possible. This means that scientists with advanced degrees should be playing the bigger role in decision making, not bachelor degree managers with over inflated salaries. Therefore, cut out bachelor degree managers and replace them with advanced degree scientists for decision making. Often, bachelor degree managers are an obstacle to progress because they don't understand the science, or are afraid of it.	Improved and intelligent Search engines to tap into online resources, as well as internal databases, to find answers to pressing questions.	Minimize the overlap and duplicate efforts that often exist among various agencies. On the other hand, minimize the minor differences that often exist among various agencies, and therefore that prevent decision making and moving forward.
1033	1032	5/17/2017	As a rank and file employee (non-Managerial and non-Supervisor), I do not experience any administrative, managerial or organizational issues in the execution of my duties and responsibilities.	What is meant by "better environmental results?" Improved communication? Increased oversight?	Be responsive to requests for support. Set goals and guidelines for customer service response actions. Increase visibility to local communities to demonstrate our desire to respond to environmental issues in the community.	Better management of personnel. Hold poor performers accountable and reward those who meet and exceed expectations of the position. Evaluate the job duties of individuals. Assess efficiencies of each position. Is each person being maximized in regards to their time and capabilities?	Invest more in renewable energy technologies at EPA facilities. In order to send a message to the Public to support these industries, the agency should lead by example. Not just by having a token system that only handles a small fraction of our energy needs, but substantial systems that can handle entire facilities.	In the areas of wastewater and drinking water, responsibility is already delegated to the States. The EPA provides oversight to these programs such as State Permitting for NPDES (CWA) and Primacy status for States to maintain Drinking Water certifications for labs within their State (SDWA). Re-alignment of activities is not necessary in these areas.
1034	1033	5/17/2017	I am in Region 2, working at the Caribbean Environmental Protection Division: One of the most disappointing aspects is working with "out dated" and or "Obsolete" Memorandums of Understanding (MOUs) with State Agencies, in this case the PR Environmental Quality Board. Also, the lack of attention to detail in to implementing and following EPA Orders, such as EPA Order 3500.1 and EPA Order 4711.	The antithesis of the above, updating MOU's, setting realistic goals and focus on better planning to achieve good executions. Historically, this office is more focused on numbers "bean counting" that actually achieving environmental benefits all together.	Provide more participation in open forums and include them in Agency "Idea banks" so we could hear, brainstorm and execute. Sometimes the solutions are in those idea banks.	Fraud Waste use and Abuse from Management. This sometimes goes "un-punished" based on a culture of "Complacency".	Next Generation Enforcement: This have been widely discussed, but poorly implemented. Using Technology (web based programs and applications). This include remote monitoring and related equipment that will help reduce costs.	Create Round Table discussions in different program areas or areas of expertise amongst sister agencies (DHS, USGS, CDC, DHHS, etc.). Redefining and re-shaping the way our agency do things.

AMERICAN OVERSIGHT

	I
1032	For starters, appoint more conservative Regional Administrators. Liberal Administrators are sometimes notorious for being big time spenders. In the private sector, such companies go belly up.
1033	Increase accountability for employees. In the private sector, poor performers are typically not tolerated. The private sector must operate efficiently in order to survive economically.
1034	Is not a matter of having Management Systems, is how EPA implement those and having the organizational culture to perform and execute (e.g. ISO 14001, Lean Sig Sigma, etc).

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1035	1034	5/17/2017	Offices within the Office of the Administrator, specifically the Office of Children's Health Protection, are not given the same direction and are not held to the same level of accountability as other program offices in HQ. As a result, the Office of Children's Health Protection, and others like it, have no clear vision and often duplicates work of other program offices. I recommend addressing this by appointing someone within the Office of the Administrator to be directly responsible for the oversight, direction and accountability of such offices.	Increase meaningful outreach and actually following through on programs, partnerships, and services long-term. Ensure all efforts that result from partnerships are sustainable at the local level - this should be a primary goal/component of all partnership engagement activities and programs.	Utilize existing positions or establish new offices within each region to be dedicated to providing quality customer services to states. Establish a new office in HQ that will specialize in environmental outreach to underserved populations and dedicate another office that will target the regulated community.	Yes, reorganize offices that have a high ratio of managers to staff (e.g., the Office of Children's Health Protection). Also look at offices that are cross-organizational, like the Office of Children's Health Protection, and fold these positions into other program offices. This would eliminate inefficiencies, duplication of work, while ensuring integration of such programs and maintaining environmental protections.	Managers need to be held accountable for their ability to lead. It is completely ineffective to have supervisors in place who understand the work (technical skills) but lack the ability to motivate or work well with others (leadership skills). The existing process for rating and hiring managers needs to be modified in a way that removes poor performing and inadequate managers from supervisory positions.	As previously mentioned: look at offices that are cross-organizational, like the Office of Children's Health Protection, and fold these positions into other program offices. This would eliminate inefficiencies, duplication of work, while ensuring integration of such programs and maintaining environmental protections.
1036	1035	5/17/2017	EPA's time and attendance system - PeoplePlus. Agency is wasting money on a stand a lone system where we could migrate and get this service from the Interior Business Center --- which I believe was the original intent when the agency moved HR and payroll services.					
1037	1036	5/17/2017	Presently, the Office of Enforcement and Compliance Assurance requires that enforcement against tribally owned/operated facilities be reviewed, concurred, and approved by the Assistant Administrator for enforcement. The review, concurrence and approval process is very burdensome on the Regions and overall no additional value is added. The Regions have vast experience in developing, issuing and enforcement of legal documents. A multitude of Regional Attorneys and management are involved in the development and approval of the legal documents. We can gain efficiencies by removing the requirement that OECA must concur and approve enforcement actions against Tribally owned/operated facilities.	States have been delegated most of the environmental statues. We can achieve better environmental results by having the states focus on egregious, repeat violators. EPA should focus on ensuring that the environmental statues are implemented in non-delegated states and on Tribal Lands. We need to stop the mountain of administrative requirements that are self imposed and those we impose on the states (performance partnership agreements, mid-year reports, end of year reports, compliance monitoring strategies, strategic plans, oversight plans). Why are all these documents required and needed. We should be focused on acquiring true environmental results.		Certainly the amount of internal regional coordination and communication needs to be addressed. Efficiencies can be gained by limiting the amount of Headquarters (HQ) involvement, review, and approval. While it is understood that HQ has a difficult job of ensuring a consistent environmental program across the Nation, it needs to be recognized that our Nation is not consistent in the environmental stresses it encounters. Western Regions have different environmental stresses than Eastern Regions. We can gain efficiencies by delegating decision making to the lowest possible management level. Senior Leadership (SES level and above) have become much more	We need to be able to electronically concur, approve and sign documents. We are still in the 18th century where paper is king. We have documents that are reviewed and approved by several individuals from several different offices. It is not unusual not to know where the document is. People spend so much time trying to find out where the document is located, who has it, has it been reviewed, has it been signed? We need to approve electronic signatures. We need to be able to electronically track a document. My goodness UPS, FedEx and others can track packages, why can't we track our documents?	

AMERICAN OVERSIGHT

	I
1035	In addition to the aforementioned recommendations, EPA needs to focus on inreach and employee engagement as much as we do outreach. The Agency needs to make "Talent Management" a priority to improve efficiencies in areas including retention and knowledge management. Human resources is EPA's greatest asset and needs to be a priority...EPA's mission can not be accomplished without dedicated staff.
1036	
1037	

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1038	1037	5/17/2017	Computer and on-line access - Single Sign-on should be just that. There are multiple on-line links needed to either perform your job or access administrative services. Each has a separate log-in with passwords expiring within different time frames. It is burdensome and not efficient. It would be preferable to have a more secure, robust initial log-in but then that's it - you're in.			Re-instate the "Superfund tax" Change the tax code to allow for remedy/Site cleanup costs to be deductible-written off. Currently the legal fees to fight cleanup can be deducted; make cleanup costs deductible then cleanup and environmental protections would be completed more quickly.	Give the Regions control of Superfund program Special Account money. Every year the Regions wait for HQs to move the money where it can be used. Every year. That 2-3 month lag is not efficient. It delays work and creates uncertainty for scheduling.	This is already being done. It is not a new concept. We already partner extensively with other federal agencies and states. This also needs support and money. Federal partner liaison programs' funding is being cut. The future is uncertain for state cooperative agreement funding.
1039	1038	5/17/2017	First, this seems ludicrous and presumptive coming from leadership that has not put one step forward to show they actually care about the mission of the Agency. How are any in the agency supposed to trust, or even want to support an entire leadership group who's aim is obviously to hand the mission of the Agency over to those most opposed to the Congressional intent that founded it? None in the leadership group coming in have taken any time to explore what has already been done over almost 10 years of downsizing and hard decisions to seek efficiencies. Second, all those past downsizing efforts, some really excellent in trimming redundancy and inefficiency, have taken a terrific toll on the Agency being able to perform at top form, or even keep up with current day technology. Ridiculous platitudes about more with less are idiotic and not helpful.	First, trust that EPA staff already do this very well. Second restore budgets for travel to the partners' home turf for face to face dialogue. Partnerships require trust. Almost all travel budgets have been severely cut and modern teleconferencing technology has taken the place of face to face meetings, except for the highest level of managers and leaders who believe only they can represent the Agency. Some of this has been effective. It is over used, and EPA has lost it's "this is my face, this is me, representing EPA as an ambassador" reputation and capacity. This is a very sad. The Agency's current untrustworthy incoming leadership state and work environment, growing exponentially every minute, is an impossible scenario to overcome. Better environmental results	See 2. above. The leadership needs to show it respects the work force and understands past years' efforts for economizing operations, how they have worked and have not worked.	One small example, legislatively required, is that the City Pairs travel contract can often lead to over costs in airline travel. This has never been something that has been effectively changed, yet staff usually can find more cost sensible (competitive) prices than the contract airlines. Overall, it has been explained that the Agency saves more by using this approach. It does not seem that way to non main hub destinations in regions with more rural makeup. Probably some significant savings if that requirement could be more flexible. Good luck.	Again, this survey has not chosen to understand what the Agency has done, been through, in the past decade to modernize, become more efficient, engage in automation and IT already. Given continued budget reductions, a setting of hostility toward the workforce and the Agency mission in a modern age (seriously, you take away the entire history of the Agency work on climate change and expect to have an ounce of credibility in the work force or the world!?), the past technology fixes seem close to having been competitive (or, at least that is what we are told every time a new software package like MS Outlook or people plus is rolled out). Were your predecessors exaggerating their accomplishments? Will	the best way to work most effectively with partners is to get out ahead of decision making processes early, talk often and share information as soon in any process as possible. I would put to you that the Agency does this very well in many ways. Just because one does not want to hear that the Agency is effective already, and that this results in rule making, or interactions that ae difficult for some sectors, does not mean the Agency is fatally flawed, as the current leadership has demonstrated it believes and is certain must change.

AMERICAN OVERSIGHT

	I
1038	
1039	One recommendation is to not roll out new systems, processes or procedures that are favored contracts from contacts with current leadership without extensive testing, vetting and proven results. The fix for everything seems to be IT innovation, but that innovation seems never fully tested, leaving the workforce to do the heavy lifting on living with inefficient systems, correcting system glitches over time, not having put the time and effort in up front prior to implementation. That mistake is about to be repeated given the presumptive leap of this survey. Please save us the grief and look before you leap, learn before you lead. You said you would.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
	1039	5/17/2017				Allow employees to work at home 5 days per week. Presently, the maximum allowed is 2. All the established benefits associated with work at home would be increased proportionally, and it create the additional benefit of allowing a reduction in the amount of office space that is necessary, thereby reducing operating cost, i.e., rent or (rent or buildings owned). This could be applied across government, not just EPA.		
1040								
	1040	5/17/2017	I work in enforcement. 1. Administrative requirements- There are too many databases that have to be populated, filling out the databases for a simple inspection where no follow-up action is taken could take 2 hours. There are national databases, region specific databases, branch specific databases, and program/sub-program specific databases. 2. Administrative/Management- There are very little standards of practice (SOP) in place, people are unsure what the processes are (administrative, enforcement, jurisdictional), and it makes everything debatable or questionable. Ten people do it ten different ways, no consistency. For instance, we should have a simple standard such that an inspection report will be sent out to the regulated entity after it is finalized so that the regulated party can begin to implement changes and EPA can talk with the state regarding	1. I have the utmost respect for my counterparts at the state, however, EPA management either do not trust the state or have power conflicts. 2. We all need to have clear lines of communication. Previous to Pruitt, I have never been encouraged to communicate with the states. I spent to much time last year trying to get involved with the states enforcement process, where a state wanted to pursue enforcement, because a power conflict between management at the State and EPA. This shouldn't happen, especially when a state is pursuing the issue. 3. I think we should be asking each state where they need assistance in implementing there program and should help in that way, in addition to overseeing and assisting in clear problem areas in the state in which there is	Customer service is not a priority to management at the lower levels. Prioritize it and set clear objectives and goals.	Standards of Practice Instead of working as "OneEPA" every branch or program are doing there own processes for workflow and file management. These things should be standardized at the national level.	1. Better file management, it would surprise you how much time staff level spends search records down for a magnitude of reasons. If you requested the all actions issued by the branch in the past 5 years it would probably take 3 months for headquarters to get the documents. It should be able to be done in quick pull from a proper system considering the state of technology.	Well I think we should be assisting the states more in areas they have problems in. More resources should be put toward communicating and working in partnership with the states. Same for other federal agencies, I would not even be able to tell you a point of contact for the other federal agencies that work on the same mission. That's a problem.
1041								

AMERICAN OVERSIGHT

	I
1040	Presently, if a budget is not all used, the next year's budget is reduced. This guarantees each person in charge of a budget will use all of it, so their budget will not be reduced the following year. There is no incentive to save money. Rather, the incentive is to spend it all (and ask for more). I don???t see my idea as a best practice implemented anywhere, but decades ago I first thought that if employees were given as a bonus in their paycheck, a percentage of the amount they reduced their budget, this would incentivize reducing cost at all levels of government. The logistics of actually getting this done would, of course, be challenging and time
1041	Yes, but, I am not going to voice them here. What I am going to voice is that management isn't always focused on management and that any of these best practices will have a hard time being implemented because resources are not put toward efficiencies and workers are not rewarded for improving efficiencies.

AMERICAN OVERSIGHT

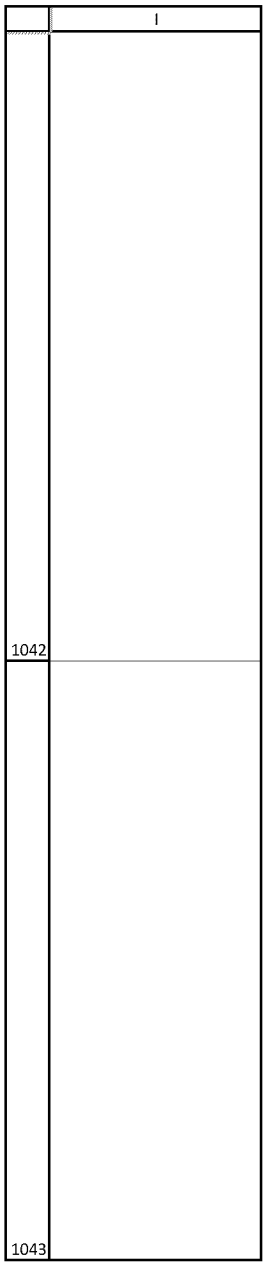
1042	1041	5/17/2017				Per the 2016 Civil Monetary Penalty Inflation Adjustment Rule and the Federal Civil Penalties Inflation Adjustment Act Improvement Act of 2015, our statutory penalty maximum amounts and guidance establishing appropriate penalty policy amounts are increased annually -- at a rate much faster than we typically receive updated penalty policies or matrices for each penalty policy guidance. This means that each case team has to expend a lot of time and energy trying to come up with complicated ways to account for the required inflation adjustment for each case. The fact that people all over the country are trying to come up with spreadsheets or to do manual calculations		
1043	1042	5/17/2017	Consolidate time-keeping systems and eliminate paper copies. Establish electronic concurrence processes for documents. Streamline and push delegations down to the lowest position possible.	Increase travel budgets to allow collaborative training, outreach, and compliance events at the Regional level (where the interaction occurs). Currently, state relations suffers from restrictive travel budgets. We are unable to train state staff and leverage their activities to provide compliance assistance. Staffing shortfalls prohibit the Regions from collaborating on other efforts as well, such as newsletters and webinars and staffing hotlines. All above are particularly impactful in rural areas where local and state resources and funding are more scarce. In these areas, web-based communications are not as effective or even always and option.	see 2	Headquarters and ORD are inflated. Staff and resources should be diverted to the regions where interaction with states, locals, and industry can be more effective.	see 1. Also, mobile device technology and applications are 10 years behind the private sector. OEI has largely been unresponsive. Mobile technologies for staff would increase access to industry for compliance assistance and collaborative opportunities with state and locals while reducing costs. Increase the use of outposts (even home-based work locations) to increase access to the public and industry while reducing costs.	outpost more to locations with state offices.

AMERICAN OVERSIGHT



AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1044	1043	5/17/2017	First of all, it is challenging to respond to this and other questions without taking into account the President's proposed reduction in EPA's budget by 31%. This action, if carried out, would greatly dwarf any minor annoyances with administrative processes, management procedures, or other organizational processes., and would result in EPA being far less effective in achieving its mission of protecting human health and the environment. It would greatly reduce EPA's (and states') ability to implement the many environmental laws and programs that we currently implement, and would hamper EPA's ability to conduct analyses that protect the economy, the environment, and public health.	First of all, states, tribes, and local communities require financial assistance in order to function. Significantly reducing EPA's budget in areas that provide direct assistance to states and tribes -- for example, significant proposed cuts to the Public Water System Supervision Program -- would dramatically curtail the ability of states and others to protect drinking water. Partnering with states is not simply about ensuring flexibility in EPA's policies, but -- even more importantly -- it's about providing the resources that states need to do their jobs.	I believe EPA is already quite effective in these activities. EPA maintains strong relationships -- through EPA HQ and the Regions -- with states, tribes, local communities, the regulated community, and the public.	Generally speaking, no. Dramatic reductions in EPA's budget, as proposed, would significantly increase costs and inefficiencies as fewer (and less-qualified) EPA staff are required to continue to implement the statutory authorities with which EPA is tasked. This will result in cutting corners and reducing the quality of EPA's work, likely leading to increased litigation, poorer customer service, and dramatically reduced environmental protection	Yes -- there are a number of advanced monitoring technologies in the air and water areas that could greatly improve the ability for EPA, states, the regulated community, and others, to monitor environmental performance and assess compliance. However, researching and implementing these technologies requires investment by EPA and partners. Significant proposed reductions in EPA's budget for programs in the Office of Research and Development, Office of Environmental Information, and elsewhere, would dramatically decelerate EPA's transition toward these new technologies, and would result in exactly the opposite outcome than this question intends to create.	The E-Enterprise for the Environment model is a strong example of how EPA can partner effectively with states to pursue shared goals. I'd recommend this and similar work be continued. "Realignment" suggests that EPA and states are not currently working together effectively to implement environmental policies, a statement with which I disagree. "Realignment" should not mean abdicating a federal role -- particularly in areas of cross-border pollution such as the Chesapeake Bay -- as has been proposed. Moreover, "realignment" should not mean walking away from
1045	1044	5/17/2017	Lead: As specified in OLEM Directive 9200.2-167, dated December 22, 2016, regions must undergo a consultation with OSRTI regarding choice of the blood lead level of health concern and other parameters for all sites where lead is a chemical of potential concern. The OLEM Directive indicates that the Agency considers the blood lead level of concern to be between 2 and 5 ug/dL, based on sufficient evidence found by the National Toxicology Program at BLLs less than 5 ug/dL and in numerous studies examining BLLs between 2 - 8 ug/DL that are presented in the Integrated Science Assessment. Requiring each individual Superfund and RCRA site, including those without RODs, those needing removal actions, and those up for five-year reviews to undergo consultations is a very inefficient process with inconsistent approaches across the Agency. Additionally, it significantly adds to the workload of the regions, while slowing down the Superfund and RCRA programs. Instead, EPA HQ should issue	If we entrust states, tribes, or local communities with greater responsibilities, we should increase grants and funding to these parties.	We should strive for transparency, clear communication, and consistent approaches across our entire Agency to gain trust from stakeholders.	Biased parties should recuse themselves from peer review of toxicity values derived by the EPA. As an example, the military is responsible for gross contamination of our groundwater with chlorinated solvents. As primary stakeholders, the input they provide on the development of toxicity values used to estimate potential risks and ultimately derive cleanup values should be minimized. EPA headquarters should issue national direction on lead, as well as on PFOS/PFOA.		It is not in the best interest of the American public or ethical for partial (i.e., biased) stakeholders to significantly shape the development of EPA toxicity values. Such stakeholders, which includes other federal agencies, should recuse themselves.

AMERICAN OVERSIGHT

	I
1044	Cross-agency EPA Lean efforts have been quite successful in multiple areas toward improving efficiency, increasing accountability, and reducing costs. Many of these efforts have also involved collaborating with states and tribes toward achieving effective outcomes. It's important to note that efficiency efforts such as Lean require resources and management support to achieve. If staff are simultaneously managing significant reductions to the scope and budget of their programs (as has been proposed), it's exceptionally unlikely that these efforts will continue to result in successful outcomes.
1045	

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1046	1045	5/17/2017	Basic requirements for correspondence are constantly changing. It would be a good practices to have quarterly updates to the Correspondence Manual and Processes. Whether it is with a Mass Mailer or meeting to facilitate these changes.	N/A	N/A	N/A	The use of mobile technology is key to be more efficient. Currently it takes a lot of "red tape" to be able to get mobile devices such as iPads. EPA employees have iPhones but they don't connect to EPA Intranet Sites to provide services. Being able to request one without the "red tape" would make efficiency improve. Also, being able to use Digital Signatures to sign documents would cut down on costs of printers, paper, etc.	N/A
1047	1046	5/17/2017	Nothing is preventing me from doing my job efficiently or effectively, however, with any process there are always ways to improve. In this light (i.e., to improve the process), a way to help streamline Superfund cleanup times would be eliminate PRP-lead sites and to have EPA employees complete the remedial investigations and supporting documents. potentially responsible parties (PRP)-lead sites are routinely bogged down in negotiations and stalling tactics which drastically slow down the investigations and response time. Of course, in order to accomplish this, additional staff levels and funding would be needed but the result of moving projects and cleanups in a more timely fashion would help the Agency achieve our core mission of protecting human health and the environment.	As indicated above, partnering with the private sector through PRP-lead investigations do not lead to better results. However, by having EPA employees perform the remedial investigations would increase the current partnering with states, tribes and local communities as staff would have more time to devote to listening to states, tribes and local communities instead of being tied up in tedious negations with potentially responsible parties.	EPA has a robust community involvement footprint and uses a variety of tools to reach stakeholders. Increasing social media outlets and promoting the science and achievements that EPA accomplishes everyday will aid the public at large, as well as states, tribes and local communities in understanding the work that EPA does, which in turn will help them provide EPA with feedback on how we can improve interactions. Improving customer service to the regulated community is a more difficult task as the regulated community needs to comply with regulations to ensure the protection of human health and the environment.	The biggest waste of resources I have observed in my 15+ years at EPA is the amount of time and money that is wasted by the regulated community trying to negotiate or stall in adhering to laws. It is not uncommon for the regulated community to attend a meeting with a roomful of people to argue about collecting a few more samples so that EPA can make a better scientific decision to protect human health and the environment, with the end result being that the regulated group spends more money in the meeting on salaries (for both themselves and EPA staff which bill hours to the project that is recovered from the regulated party) than they would save by just collecting the needed	Yes, there are always new technologies that can be adopted or modernized to make investigations and cleanups more effective and efficient. EPA's Office of Research and Development are a key factor in providing the necessary scientific research to identify and move the technologies forward for use by EPA staff, as well as states, tribes and the local community. Developing new technologies also helps to create jobs while fostering an improvement to human health and the environment.	Within the Superfund program, harmonizing the remedy with restoration activities, which are under the responsibility of NOAA and USFWS, would be a way to ensure that the environment is returned to a useful resources in a more timely manner. This could be accomplished by merging CERCLA with the NRDA authorities with a net result in reducing the sampling and analysis costs because only one set of data would be needed instead of two. This would reduce the cost incurred by the regulated community and result in a more timely cleanup, which benefits public health and the environment.

1047	One best practice that would help speed up cleanups at Superfund sites would be to expand the flexibility of the Agency in using presumptive remedies. Currently, only specific types of sites, such as landfills, can proceed with a presumptive remedy, which means there are proven technologies that can be employed to address contamination at a landfill without conducting a full remedial investigation and feasibility study. By expanding the flexibility for EPA to use presumptive remedies for other categories of sites, such as contaminated sediment, the cost and time for identifying remedies to address polluted sites could be decreased, while achieving the core mission

1048	1047	5/17/2017	1) Purchasing Limitation 1: We utilize the Mandatory GSA Advantage website for purchasing for our in-house stock room. When one logs into GSA Advantage and looks for one specific item, say an archivable 0.5 mm black ballpoint pen, you are instantly given hundreds of contract results for the same pen. Each option has a different "strategic buying" icon(s). We were told that out of all of those hundreds of options we are to us the one labeled "FSSI" Only! Reluctantly we chose that option and receive a pen that is 0.5mm, black and ballpoint but a subpar Skillcraft brand "similar" that is not Archivable! I read the language of the FSSI agreement and it allows the contractor to substitute, in order to save the government money, an equivalent lower cost item at their discretion. The problem here is that the Government paid the same price as list in the non-FSSI contract for a sub-par PEN! It's fine to have different buying options but it's ridiculous to have hundreds of different buying options just to tell us we can only	From my narrow perspective, I think the EPA does a fine job with this already.		Please see Q1. In general, the transition from Fewer feds to more Contractors and purchasing limitations/requirements/restrictions are making all scientists into Administration each year. Eventually, it will be hard to do any science at any of the labs.	Yes. Especially with IT and computer systems, but it seems our hands are tied up with the required contracts that are awarded to us from people that do not understand at all what it is we do in our lab.	
1049	1048	5/17/2017	Budget uncertainty is always an issue- while I understand that congress controls that timeline, it would be an advantage to have it sooner for planning with our NSSC. Or we could hire entry level scientist to provide a consistent workforce for research planning. Tying the leave system to the pay roll system. Once leave is approved it should automatically update our timecards.			More funding for replacing outdated equipment. newer equipment could reduce the sample volumes collected and transported, the run time on samples-being able to run more samples in less time, reduce reagent volume which saves in the cost of those reagents and disposal of the generated waste. Newer instruments may have less breakdowns-saving time in trouble shooting.	Increased use of crowd sourcing. New in situ instrumentation.

1051	1050	5/17/2017	Purchasing is a black hole of time. As the PO on an equipment purchase, it took 14 months to be awarded after the submission of the package to the EAS system. The National Student Services Contract has helped greatly.	EPA needs to partner better with these parties Right now, these interactions are like a big brother telling the little brother to do something. Using matching money concept, i.e., federal funds are matched by funds from state, local or other parties. Because everyone has something in the game, folks work better for a common goal.			I have no recommendations	I have no recommendations
1052	1051	5/18/2017		One of the biggest impacts that we could have is in utilizing our considerable scientific expertise to better inform and educate the public at the local community level about the established scientific facts around the hazards posed to human health and the economic costs to society of harmful chemical exposures and climate change. Scientific fact is not, and must never be allowed to be viewed as, simply a matter of opinion or policy. General scientific illiteracy poses a huge risk to the ability of local communities to make decisions in their own best interests, especially in an era of "alternative facts". EPA is in a position to explain in clear language the risks posed by various exposures and activities, and to demonstrate the science that underlies our understanding of those risks. EPA can partner with community colleges, school districts, and

1053	1052	5/18/2017	At this point, a significant hurdle to moving forward successfully with priority activities is the lack of senior management within the EPA and as a result, lack of direction on paths forward for critical work. This could be addressed by prioritizing the nomination of AAs for the relevant media office. Particularly useful nominees would have substantive knowledge in those media areas, as well as experience working in the government. Managing environmental obligations while providing opportunities for economic and other development is difficult and sometimes complex work that requires a balance of cost, benefits, and significant strategic analyses. Career staff can provide the information that support these analyses, but ultimately, decisions need to be made in a thoughtful and considered manner to enable forward progress. To the extent nominees for AA-ships are not available, I would recommend that political management take advantage of the knowledge and experience of career staff by seeking out	I have three recommendations for improvement in this area: 1. Moving to electronic systems for as many programs as possible -EPA has been slow to move towards electronic tracking and management systems for enforcement, permitting, compliance/monitoring, among other areas. -The slow pace of electronic transition has resulted in a patchwork of electronic programs as each media area "does what it can with what it has" to make due -Recommend a comprehensive overhaul of EPA's electronic systems to consolidate into as few systems as possible and move to electronic media for all submittals to EPA including all permits across all media -This will be a short term high resource investment which will likely ultimately improve EPA's efficiency overall and facilitate better	Communicate regularly - talk with all stakeholders and openly share information on regulatory, guidance, and other priorities/actions. Communications should occur at all levels of government from staff-to-staff to higher level. Collaborate frequently - collaboration is a level above simple communication. This is engaging with partners on workshops, webinars, meetings, and other more "hands on" opportunities to work together to achieve better environmental results Make good on commitments such as meeting statutory deadlines - follow through is important in any relationship. The EPA needs to be able to show that it can make good on its commitments to its partners.	High performing staff at EPA do not have enough upward mobility opportunities. The result is that a percentage of the highest performing staff will typically leave EPA before they are given advancement opportunities. Continued use of programs such as the SES candidate development program, SES/senior management trainings for GS14/15 high performing staff, FEI, and other similar ideas can provide incentive for the highest performing staff to stay at EPA. Staff should be given every opportunity to participate in high level briefings - even lower level/newer staff. This is how people learn. We should be building the EPA staff of tomorrow, today.	EPA is way behind in e-modernization for all our tracking and submittal systems, across all media programs. A wholesale upgrade and movement to e-permitting, e-submittal etc... would revolutionize the EPA and improve our efficiency, effectiveness, and accountability. See previous entry for more information.	There are many ways to do this and there's not nearly enough space here to talk through this. That being said, here are a handful of ideas: -IPAs with states - do exchanges between state and EPA personnel, and possibly other federal agencies where appropriate -Engage in regular meetings with states/other federal agencies -Offer within EPA details across different offices (OGC, OECA) as well as media offices so folks in air can experience how the water office works, for example -Have a strategic plan that aligns closely with statutory obligations and
1054	1053	5/18/2017	Training modules should be more tailored to our individual needs and responsibilities. ORD's matrix has increased the size of management while the overall research budget has been reduced. A slimmer more efficient managerial structure is badly needed.	More extensive processes need to be put in place to identify urgent research needs that are then fast tracked to appropriate federal laboratories. Quite the opposite occurs by which ORD does not have comprehensive research programs to tackle e.g. hydraulic fracturing or coal fly ash spills. There should also be a certain amount of freedom for federal scientists to follow their nose as they are the one's attending meetings and noting problems before that of the general public or administrative official.	There needs to be better communication about what the problems are and high level decision making that direct resources towards solving them. This needs to come as above base support else the base becomes eroded and dysfunctional.	We have world class laboratories that are woefully underfunded and understaffed because of progressive cuts in the Agency both from a fiscal and personnel standpoint. Having more flexibility to attract outside funding through IAGs, CRADAs etc that are a win-win needs to be more broadly encouraged and supported.	Documentation of Agency science (from conception to final product) relies on a smorgasbord of different computer programs that all require the same information but through a different portal. Having a better master program that all in the information goes into and gets collated would be superior and a great efficiency.	We should be able to apply for federal grants from other Agencies such as NSF and NIH. This would leverage our infrastructure and would create more bang for the buck for the taxpayer

1057	1056	5/18/2017	Problem 1: Management has been preventing our move to an electronic concurrence system. As a staff person, I am not privileged to know the true reason why; however, I have been here long enough to know that there is a political interest to keep using paper. Our paper concurrence system is one of the most inefficient parts of our internal administrative process. Solution 1: issue an Order that EPA move to an electronic concurrence system within 12 months, or justify in writing why moving to such a system is not feasible or economical. Problem 2: Once regulations are promulgated and implemented, any questions, issues, or concerns that arise are handled on a case-by-case basis at the regional level. There is no feedback loop to ensure that rules are improved over time and no sharing of information across regions. Solution 2: implement an process where issues pertaining to the implementation of existing regulation are recorded, shared, and potential solutions proposed.	We need better coordination. Specifically, we need a memorandum of understanding or agreement between EPA and each State to ensure that all activities are carried our consistently. It should be a requirement that EPA set up MOUs or MOAs with each State for all programs.	We need to be responsive and invert our "black hole" approach to customer service. I call it the "black hole" approach when customers reach out to EPA to either receive no response, or one that it is not helpful. Or, EPA may suck the customer into a seemingly endless bureaucratic process where it is unclear at the end if any benefit or solution was achieved.	Push for more State approved programs and delegations, especially for long existing rules (e.g. Underground Storage Tanks). If States do not have the necessary approval, EPA needs to understand why that is and what can be done for the State to achieve program approval. Once this is achieved, then EPA reverts to an oversight role; which requires substantially less resources than implementation.	Switch from a time based system to a performance based system. In a performance based system, a person who enters the office on-time and leaves on-time, but without accomplishing any work, would be penalized. Currently, it is not possible to penalize those who do not work if they enter and exit the building according to their scheduled hours. The process to do so is cumbersome (e.g. improvement plans) and ineffective.	There is no forum for communicating shared responsibilities and mutual interests across federal agencies, nor any requirement that I know of to do so... it is left upon the will of the administrators for each agency to seek such opportunities.
1058	1057	5/18/2017	The current Office of Policy has oversight over publication of all Federal Register Notices, even routine notices. This is a new requirement implemented by this incoming Administration. As a result, we are approaching a 6 MONTH DELAY in issuing ROUTINE FEDERAL REGISTER NOTICES. This will delay our review schedule significantly, and result in missed statutory deadlines, which could potentially place the Administrator in legal jeopardy. This could be easily addressed by allowing the program offices to do their jobs and conduct their own oversight of Federal Register Notices, as was done for many years.		The EPA website and existing blogs provide a wonderful tool for communicating with the public at large. EPA's press office and offices of congressional and intergovernmental affairs have existing tools for working with states, and EPA's tribal programs are among the most advanced in government. These should be utilized to provide customer service.	EPA has a nascent GreenSpark program that can be built upon.

1059	1058	5/18/2017	Not having attorney bar licenses being paid for. However, position requires an attorney to be in active and good standing with the bar. Having attorney bar licenses would allow for job to be done for efficiently and effectively.	More meetings with NGOs to explain the FOIA and eDiscovery process.	More local, state, and federal task force for handling eDiscovery.	Promotion of younger employees to senior management identifying key employees.	Increased paperless environment with the use of iPads and other table technology. Increased wifi at EPA campuses. Increased telework equipment such as additional monitors and docking stations to allow for more teleworking in a professional work like setting.	Conduct eDiscovery training to all of EPA attorneys and staff involved in litigation.
1060	1059	5/18/2017	We have a lot of data systems to use to manage the Agency's business side. For example, there's EAS for contracts which few people master, because it's so complicated. A couple more that I know of are COMPASS and Easy Lite. There's also a separate database for managing grants - IGMS. Then we have People Plus which has improved with time, but still could be streamlined. There's another system for managing controlled correspondence. And there are probably more I don't know about. None of these systems are straightforward. I think it entirely appropriate for someone to take a look at all of these and figure out how to make them more user friendly, maybe even merge some.					
1061	1060	5/18/2017	Processes for hiring take too long and are too cumbersome which means that the best qualified candidates are not available by the time hiring is allowed. Recommendation -- streamline Federal Hiring process. Administrative support organizations (OEI and OARM) are significantly understaffed which impacts the ability of all of EPA to get their work done. Recommendation -- dedicate resources to eliminate backlog in contracts and to help the Agency modernize IT.		Modernize our technology and systems to embrace digital collaboration and feedback.	Streamline basic business processes across the Agency. There is no need for each organization to define its own procedures for bankcards, grant management, etc.	Yes.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1062	1061	5/18/2017	Please let first line supervisors initiate termination of employees without explicit OGC approval. We should consult with OGC but not let them decide whether we can proceed and begin process. Please review every employees' grade level every 3-5 years. An employee should not retain a grade level if they are no longer doing work at that grade level. This is a widespread problem at the agency. I have never seen someone downgraded, nor can a supervisor request a desk audit of an employee.					
1063	1062	5/18/2017	I can't think of anything.	This isn't easy, but one possibility is extra efforts to hire people who have worked at state EPAs. I have worked at the state level, and you have a different perspective when you have worked there.	We just have to continue our outreach and make it part of our culture. Overall here at EPA, I think our staff is high quality (and improving!), but I don't think our managers are as good. My manager is very good, and his manager is good, but that is atypical here. I think our management needs better and more training. The transition from analyst to manager, which is typical here at EPA, is very hard. We need to train our managers to be better in all ways, especially in working with states, tribes, local communities, the regulated community, and the public at large. Extensive negotiation training for all managers would help accomplish these goals.	Better management would help. I think the SES should be better paid; right now many great managers stay as GS-15s because the pay is not worth the hassle and extra work involved in being an SES. Better management would greatly increase productivity.	Hard to say - it depends.	I don't think we can. I used to work on the state level and budgets in most states are extremely tight. Where I worked, over a period of years there had been a 25-30% reduction in personnel. This is typical of many states. EPA needs to maintain (or increase) its number of personnel to support states our shared environmental protection efforts.

AMERICAN OVERSIGHT

	I
1062	
1063	I think we should think very hard about how we recruit and train managers. Good analysts are not necessarily good managers, and many (if not most!) scientists and engineers don't have natural management and people skills. We should look very hard at different models in the private sector of companies that are engineering/science-heavy that have good management. ExxonMobil is very well-run, I think, although you'd have to heavily adapt whatever you found there because they are very conservative and we are liberal. Also, government is not a business. FERC might also be a good example; I think they are better-run than we are.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1064	1063	5/18/2017	Unfortunately, things under the new administration have not improved significantly with the passage of time. We are finding that our projects are not moving due to the organizational processes the new senior staff has put in place. It has become exceedingly difficult to publish FRNs, changes to web pages, etc., This was acceptable for the first several months, but we are now an entire semester into the school year....a freshman in high school or college has to finally learn to trust his teachers, advisors, tutors...to know they can be mentored and move things forward.	Request Administrator Pruitt to please publish his vision, talk with staff, have town hall meetings and explain his vision for EPA to staff. The staff will come on board. The staff and agency support collaboration with all of our stakeholders including INDUSTRY.	Hands on, customer service, allowing states primacy, leadership and the discretion to make their own decisions.	Hold employees accountable, set your expectations, make them clear, and hold employees accountable. Reduce printing of manuals, copies for public, etc., Reduce travel, waste, unnecessary expenses. Each office needs discretion, but encourage that within that discretion, they need to tighten their purse strings. Better support staff, allow technical experts and senior staff to focus on the science. There is a reason you utilize HR Block or a Tax Atty to do your taxes. They are the experts in that field. Treat the employees the same way. Encourage seasoned employees who have perhaps fallen victim to "this is the way we always do it" to retire to free up salaries	Instantaneous reporting and website transparency to the public.	Ask the States and other Federal Agencies what they need, then work on 1-2 priorities to meet those challenges.
1065	1064	5/18/2017	Political interference from senior Agency executives; discrediting scientific consensus, restricting scientific research and ignoring scientific evidence on the part of senior Agency executives; pursuit of an entirely political agenda on the part of senior Agency executives	Pursuing objective research, acknowledging scientific evidence, abandoning political agendas	Pursuing objective research, acknowledging scientific evidence, abandoning political agendas	Return to following and honoring scientific evidence, research and consensus

1066	1065	5/18/2017	Contracts Office is a mess; they need more people - who have expertise in contracting. They also need a lesson in Customer Service. The misinformation, slowness and general processes/procedures greatly impede getting work done using contractors...who really supplement our FTE a lot.	education of each of these groups about basic principles of government, e.g., Congress makes the laws, Executive implements them. Next, basic understanding of principles of particular regulations and SCIENCE (e.g., cant know what you don't know...there are limitations)	Same as Q2...service to tribes and local communities in particular really do not have very basic understanding of how things actually work.	Lots of security guards standing around chatting with one another; while ONE checks badges, etc. Mere presence of uniforms is not really a deterrent. Mandatory trainings are proliferating, for every little thing...is this really necessary, esp for things one doesn't even do?	Yes! Maybe it is insufficient resources or generally not having really good IT people, but EPA seems to have the "budget" version of all software...none of them work WELL, For Example, SharePoint has not really worked WELL at EPA. Then there are the multitude of "home grown" or stripped down versions of software for all the basic infrastructure (e.g., PeoplePlus - have never deployed the leave slips self-populating the timecard, FPPS-what a joke!, WebForms-incomplete, not everything there; only some are 'workflow" active; Concur has been broken for EVER re: proper codes and flags) NONE of these are integrated; NONE of them work WELL (crash prone, don't allow for basic flexibilities, etc.). the basic	Don't expect/direct TSCA to "take care of everything". Presumably, Congress had reasons for passing laws in addition to TSCA to take care of specific things...e.g., overlap with OSHA, other statutes that EPA implements, e.g., CAA, CWA, RCRA, etc.
1067	1066	5/18/2017	There is a lack of good mentors at EPA as there has been very little done to implement an official mentor/ mentee relationship (since I came on board there has been a talk about implementing senior fellow/ historian program which should have been there decades earlier), mainly due to managers not being experts in the field they evaluate, this is a serious problem which leads to huge frustration as you get evaluated by someone who doesn't understand your expertise and makes calls on your projects, which make little sense. Also there needs to be clear impartiality procedures as favoritism is a major deterrent to progress.	Trust building based on honesty with firm scientific evidence will convince everyone, it takes many years to change mind set, but faced with scientific evidence most of us come around.	Excellent,open, honest communication and major trust building is our responsibility as public servants.	We need clear scientific evidence based guidance and a common ground between scientists and policy makers to come to a middle ground while protecting human health and environment for our future generations, so a more unified approach to society with many town halls on this topic is essential. All stakeholders must be heard on all sides and then a clear voting process should be implemented from all sections of society to make an informed decision.	Absolutely, we as a office need to be aggressively implementing alternatives to animal testing, which we haven't done yet, while the other regulatory agencies around the world are already implementing and recommending alternatives to animal testing. This is imperative as we are already few years behind the world, throwing more money towards animal testing when there are very good scientifically sound alternatives which are available to choose from and make a sound regulatory decision.	We need more effective and open collaboration between NIH, FDA, NIOSH and other federal and state regulatory agencies through interagency bodies like ICCVAM or ECHVAM (European version) etc.. with partners from university and Industry and general public to be strongly involved in our decisions.

AMERICAN OVERSIGHT

	I

	A	B	C	D	E	F	G	H
1068	1067	5/18/2017	My statutory (but non-regulatory) technical assistance program relies on being able to do outreach to the manufacturing and general business sectors. The Product Review process to create educational pieces for the public and others is cumbersome and lengthy, with many unknowns and no straightforward way to obtain answers. I'm in a regional office and our Product Review officer is often unable to get consistent and straightforward answers to questions from his HQ counterparts. There seem to be significant disconnects between the communications folks at HQ and the program offices at HQ with respect to appropriate templates, logos, style, and what content is subject to product review and what isn't. Documents submitted to the process are lost in a black hole. The process needs to be re-examined, streamlined and posted on the Intranet. Product Review officers need to be trained so they can assist program staff. Standard templates for EPA material need to be made available as well as FAQs for content preparers.	To EPA, "better environmental results" usually means measurable outcomes that meet some numeric threshold. This sounds good in theory but often results in tailoring the EPA program so that our programs (via grants, regulation, etc.) achieve numbers at the expense of developing meaningful partnerships. My program provides technical assistance to small and medium sized businesses that aren't able to make the changes in the required one-year time frame, but that doesn't mean the interaction and outreach isn't valuable. We just can't spend the time creating great partnerships when constantly pressured to produce numbers. My solution: give the regions and EPA programs a break on the numbers so we can get out in the field and develop the positive partnerships that will result in real environmental	Staff spend too much time in the office and not enough time in the field meeting with the entities listed above to create workable solutions. More travel money and more emphasis on providing customer service. Whatever you do, do not close regional offices. We serve a valuable role as a liaison between national initiatives and help tailor those to the unique needs of the stakeholders in our region.	I'd like to see the Pollution Prevention program (implemented as a result of the P2 Act) integrated with RCRA inspections. The P2 program requires EPA to provide technical assistance to businesses to prevent pollution from being created in the first place. Our work has shown that businesses save considerable money by implementing energy and water efficiency features, and reducing hazardous waste by replacing with less toxic chemicals and making process improvements. Unfortunately, it is viewed as a conflict for RCRA inspectors to work with manufacturers on implementing P2 practices. The P2 program operates separately from RCRA, which makes no sense.	I think EPA does a good job at keeping up with new computers and programs and providing training on new computer systems.	I don't see much overlap. The feds play a vital role in ensuring state and local politics don't remove key environmental protections with changes to state funding and elected officials. In the 27 years and three programs I've worked in, I thought we worked well with the states.
1069	1068	5/18/2017	Since we have smart cards, all accounts should be accessible via PINs. We should not have to remember so many passwords for all these accounts and constantly have to change them. In DoD, your smartcard allows you to log-in, once you pull it out, you have essentially locked your computer. We should use our smartcards this way to prevent leaving the building without them. Also, the amount of approval we need from our supervisors on every little administrative task is too much. Plus, most of this process isn't even electronic. It's inefficient and arduous just to change a CWS day off (for example). Processes should be more streamlined, electronic, and less burdensome to our supervisors.	It would be nice to be more in touch about upcoming laws/bills and providing input on such developments. I	Perhaps an automated message letting them know comments to the FR have been reviewed. I think acknowledging the public in particular that they have been heard will encourage them to continue connecting with us.	Yes. Less use of electricity in our buildings. Do we really need individual trash cans that have to be emptied every single day? And what is the deal with all the rolls of toilet paper being used to prop open the bathroom doors during cleanings? We could probably use less paper, email storage, and conference lines to save money. An Agency policy about the use of SharePoint might be helpful in improving efficiencies.	Yes! As mentioned above, PLEASE let us use our smartcard for all accounts and end the need for all these passwords that constantly need to change and are easy to forget. We need to maximize the value of SharePoint and improve version control.	We can ensure that there are fewer gaps in protecting human health and the environment. Including other agencies in our regulation plans/processes can provide additional perspective to help us meet needs more effectively.

AMERICAN OVERSIGHT

	I
1068	No
1069	As mentioned, DoD's use of the smartcard is ideal. EPA can certainly reduce the use of paper, simplify/streamline supervisor approval, and truly adopt an electronic process (for example, docusign).

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1070	1069	5/18/2017	My office relies heavily on review by internal committees. These committees can impede progress and slow the work of OPP. I recommend that existing review committees in OPP be reviewed for need and effectiveness. This is particularly true for conventional chemicals.	OPP is a very insular office in that it is located at HQ in Washington, DC. Staff rarely gets out to discuss pesticide health and safety issues with the public. Our main interactions outside of the office are with agricultural groups and interests. Although important the agriculture is not the only sector we should be establishing good external relationships. I recommend "town halls" with a variety of the public sector (state health officials, state departments of environment, farm groups, etc.) to assess their interests, and concerns with respect to pesticides.	OPP has poor relations with the environmental community and would benefit from efforts to reach out to the environmental NGOS to discuss issues before they lead to petitions and lawsuits. The environmental NGOs are representatives of the public at large.Currently, the National Pesticide reform Coalition (NPRC) which includes members from these NGOs meet with us only twice per year for an hour after our twice annual PPDC meetings for all pesticide stakeholders. I recommend more frequent interaction with these groups.	OPP is top heavy with management. Our office had 1000 staff in the early to mid 2000s. Since 2008, attrition has reduced our staff to 600 or fewer. However, management has not decreased accordingly. We still have too many top level managers (SES and their deputies). There are now almost 2 deputies for every division director in OPP. One is probably sufficient. Cost savings and efficiencies could be had by at a minimum reducing the number of Deputy Division Directors currently in place and putting them back into production work. This would also save on space as we consolidate as fewer deputies means fewer enclosed individual offices.	Electronic labeling is very important to more a effective, efficient, and accountable OPP. We license and label many hundreds of chemicals and thousands of products and keeping track of them and the many changes to labels has been shown to be difficult with paper filing systems. Electronic labeling technology is key to keeping our records current and accurate.	The Endangered Species Act (ESA) requires knowledge at a local level. OPP is centered in HQ WDC. Could their be a way to partner with the National Resource Conservation Service, growers, states, and local communities to minimize the impacts of pesticides on threatened and endangered plants, animal, and insects? This could reduce the burden that this difficult but important task places on the EPA and USFWS as they struggle to develop an effective approach to pesticide ESA consultation.
1071	1070	5/18/2017	Chain of approval and review for outreach communication and public databases is arduous and shows lack of trust between management and staff. Every circumstance may be different, but reducing the amount of review to lower levels would result in quicker completion of tasks. The practice of reactionary tasks with strict target dates because something is in the media does not always result in the most thought though outcome. If EPA were to increase their communication with the public on how decisions are being developed then it would show the progress in transparency.	Outreach and communication could be improved and increased in all offices.	When people call the EPA with a question they are routed around until they give up or 12 calls later reach the person they are need to talk to. This system could be greatly improved to increase the public confidence in the EPA.	Enhancing TSCA's ChemView would reduce costs for small businesses and industry that generally rely on consultants to inform them on what is known and how to comply with TSCA. It would be achievable and marketable to bring ChemView to its full potential in a reasonable timeline (2-3 years).	I would like to reiterate that ChemView is a great tool, but needs more resources (human, creative and financially) to achieve the ultimate vision. Also internal tracking systems for data submitted to the EPA is manually tracked, but with project turn around in an IT age this process could be vastly improved and made efficient.	Information, including CBI, sharing should be stream lined between states and other federal agencies (FDA, USDA, ect.) to increase the knowledge of chemicals in commerce.

AMERICAN OVERSIGHT

	I
1070	OPP's risk assessment approaches are considered very good by any standard and should be considered by other agency offices.
1071	EPA is the gold standard for chemical risk assessment because of its reliance on data. However, the strong evidence approach does slow things down. More resources should be allocated to increase the quantity of risk evaluations that the public deserve to have conducted.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1072	1071	5/18/2017	Biopesticides include a reduced data set for registration due to their inherit low toxicity. This is highly beneficial to small companies developing biopesticide products. For many of these companies an increase in data requirements is not financially feasible. Data requirements have been recently increased for toxicology, specially in the area of tolerance exemptions. Biochemical pesticides are subject to PRIA for registration. There is time constrain for review of applications. Review time is being increased due to increased scientific scrutiny and recent policies seeking to subject biopesticides to the same standards held for conventional pesticides with a toxic mode of action. Scientific reviews now have to go through a sequence of review committees outside of one branch or Division. Each branch should maintain its own policies and procedures to handle its own products efficiently. The idea of One EPA undermines efficiency within each Division by creating unnecessary bureaucratic hurdles that eventually	Industry is an important partner for pesticides. All will benefit greatly from the development of less expensive testing methods. For example, alternatives to animal and human testing are highly desirable. Industry should partner with academia and both should lead the effort in developing testing guidelines acceptable to the Agency. The Agency should not be in charge of developing its own testing guidelines or dictating testing methodologies, but reviewing and approving or adopting them, since this is not a scientific/hands-on-research institution but a regulatory Agency. The Agency should also seek to harmonize more and find more common ground with regulatory procedures for pesticide registration worldwide.	For pesticides, lower the cost of registration which translates in more affordable price for consumers. Facilitate and promote the development of safer insecticides and new technologies. Engage in more delegation to states, communication with, and input from industry and the public.	Partner with the private sector. Maintain the integrity of every branch and Division within the pesticides program. Reduce the layer of management within each Division, simplify the registration process and streamline data requirements to fit the characteristics of the products they represent.	One big problem is the routine meetings with the Human Study Review Board (HSRB or also called the Board)), which meet twice a year, for review and approval of study protocols and study reports of insect repellents tested on humans. Many mosquito repellents miss one year because they can synchronize field testing during mosquito season with HSRB meeting schedule. In order to avoid routine consultations with the Board for of the same type of studies and procedures, a standard operating procedure, approved by the HSRB, could be always followed for all testing and review by the Agency for ethics and science content. The Board should only be consulted with something is new but not on repetitive,	In some cases we need more collaboration with FDA. The rule should be revised to clarify jurisdiction of each Agency for products against human health pests, whose definition and function as pesticide & drug often overlap; i.e, lice products.
1073	1072	5/18/2017					We need IT support that views EPA employees as customers, not inmates. The lack of support for remote access and the general lack of competence is ridiculous. I'm a policy analyst: I shouldn't also have to be an IT expert in order to do my work.	

AMERICAN OVERSIGHT

	I
1072	For pesticides, work more like a private organization would in terms of pesticide registration. Reduce the layer of management within each Division. Maintain the integrity of each Division or Branch. Maintain the regulatory and science personnel working together in one branch or Division. Don't have separate regulatory and science branches or divisions. Partner with industry and academia for their input on science. Streamline and simplify data requirements; they should adhere to the nature/properties/characteristics of the chemicals within each branch or Division; Stereamline and simplify registrations process and steps (example, eliminate routine and repetitive joint reviews
1073	

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
	1073	5/18/2017					Consistent use of Adobe Connect for meetings (e.g., All Staff). This will allow for 1) more effective participation of employees not physically present for the meeting (e.g., teleworking staff) and 2) recording of the meetings for future reference. For example, audio/video recordings of trainings/workshops can be posted on the Intranet for future re-viewing by employees who attended and/or viewing by employees who may not have been able to attend.	
1074								
	1074	5/18/2017	The HR process is broken. My Position Description (PD) hasn't been modified in 14 years. I do 15% of what the PD describes. The 85% balance is more complex, broader in scope, and requires more responsibility managing health and safety of others. With the attrition at EPA less people are doing more work and a broader variety of work. The need to shift focus more frequently has a significant cost in working efficiently.	Having an adequate budget for meeting the obligation under the various Statutes that the US EPA is responsible for administering. Having an annual budget at the beginning of the fiscal year so that we can give the states we work with answers to their question about grant amounts. Often their state budget relies on Federal funds passed through EPA. Continuing resolutions automatically create significant uncertainty at the state level for on going work.	Face time with our state, Tribal, local community and regulated communities. Physically located near enough to these groups to allow for personal interaction. Much like what EPA Region 10 does with state operation offices.	US EPA working directly with our State and Tribal partners sharing out strengths in Research and Development, our labs for analysis etc. But also recognizing and working with State and Tribal assets for monitoring and analysis. Sharing missions and the information we carefully obtain. Also, collaboration between federal partners on achieving common goals for protection of human health and the environment.	Electronic signature for Discharge monitoring reports (DMR). The ability to submit electronic DMRs	See above, we already do a lot of work together achieving a mutual interest and goal, but we have unique roles to play. They offer synergy in meeting our shared goals of protecting human health and the environment.
1075								

AMERICAN OVERSIGHT

	I
1074	
1075	We set as a goal at least bi-weekly calls with State program managers to share developments within EPA and learn of developments within the state or tribal program. The focus is media specific and is meant to keep our communication channels open and effective. We participate in 'inter-entity' meetings with State, Federal, Tribal representatives to talk about who is funding various infrastructure projects. It helps to prevent confusion and redundant funding. Great for efficiency, accountability, and cost reduction.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1076	1075	5/18/2017	1. HQ makes all of the funding decisions for grants, but the regional personnel provide all of the day to day project management to communities and states. More resources (funding and FTE) and authorities should be given to the regions who perform the work. 2, Administratively, the maxiflex and people plus system do not "talk" to each other such that time and attendance data needs to be submitted in twice in two identical but separate systems.	1. Provide more Brownfields 128(a) grants to states. The number of new tribes that are entering the program each year takes much needed funding from state agencies that cover large geographic areas and large populations. 2. Allow the regional offices more control over funding decisions for grants and contracts. The regional office are much more aware of which communities and programs are most in need of assistance and can use the funds most productively/efficiently.	Allow the regional offices more control over funding decisions for grants and contracts. The regional office are much more aware of which communities and programs are most in need of assistance and can use the funds most productively/efficiently.	Yes. Hire more scientists and engineers in the regional offices. All direct work with states and communities to protect human health occurs at the regional level. Reduce the number of managers. The employee to supervisor ration is very low and should be increased such that there are more employees reporting to less supervisors. Some sections have only 5-6 staff supervised by 1 person. 8-12 seems more reasonable. Encourage more sharing of federal vehicles and portable monitoring equipment.	Allow employees to receive and respond to emails on a smart phone. Currently, our EPA laptops are heavy and clunky and more work could be performed when commuting by train of we could respond to messages on our personal telephones.	The state agencies in Region 5 have experienced severe cuts. The regional staff is vital to assisting the states, where their programs have been decimated.
1077	1076	5/18/2017	I work in the **[REDACTED B6]** program, and this answer is very specific to that program: we spend an awful lot of our time chasing suspensions from our submitters - fifteen days is the standard, and it often happens that there are six, eight, ten suspensions sought during a review. Each may require several calls to set up, and enter into our software. It seems to me that we would save a lot of everyone's time by giving an automatic six month suspension to any submission which did not get immediate approval, and to put the onus on the submitter to request any extensions. My branch chief has noted that this is NOT what is contemplated by the statute, though!	I think chemical regulation is appropriately a national program.	My particular program **[REDACTED B6]** has a big information provision requirement, for letting people understand how to submit and whether they need to. I have a feeling that our web site could do more to enable people to get that information relative to their needing to call us. I think our web service is pretty good, but it seems to me it could be better.	We have a system, in **[REDACTED B6]**, under which approvals are chemical-specific. A result is that sometimes chemically and toxicologically indistinguishable materials face substantially different regulatory outcomes. Now that we have, under Lautenberg, and at least theoretical ability to walk back prior approvals which were not wise, it seems we might be able to establish regimes for clusters of near-identical materials, and not have to review each with great labor. Bio-fuels are an example, and the wishes of the Soap and Detergent people are worth thinking about.	I'm not at all up on new technologies, so not useful here. By the way, I don't feel any need to be anonymous here: I'm **[REDACTED B6]** and if anyone thinks my ideas are interesting I am happy to talk.	When I was at FDA, we contracted with State food and drug agencies to accomplish inspection, etc. for us. It seems like it would be worthwhile to look at FDA interactions with the States and see if we can use it as a model. Some countries have been using other countries' approval processes ('if approved in two OECD states, we can accept') - I doubt we want to go that far, but more careful look at what is approved in Europe, China, etc., might do us some good.

AMERICAN OVERSIGHT

	I
1076	Have a minimum retirement age and improve scientific integrity by only promoting scientists and engineers to oversee other scientists and engineers. All managers need better technical backgrounds.
1077	Not really

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1078	1077	5/18/2017	In ORD, the "matrix" is an unnecessary level of management that provides little added value to the work being conducted but adds significant time burdens to researchers and managers. As an example, many additional meetings are needed simply to communicate up the two different management chains (Labs/Centers/Organizations vs. National Research Programs). Additionally, there are conflicts in priorities between the two management chains, and individual staff have a difficult time navigating these issues. My recommendation would be to merge the two management chains and potentially reduce the number of people in these roles. There are many administrative burdens that could make EPA staff much more efficient. For example, (1) All training should be done through one website only (e.g., the EPA Skillport site), (2) IT systems should be integrated to the extent possible (e.g., financial databases,	My suggestion would be to make it easier to partner with states, tribes, local communities and the private sector. We do a lot of this already but it is often informal and falls under the radar. Find ways to make it easier to find partners within these sectors, share funding in both directions, and share information within EPA about the work. The Regional Applied Research Effort (RARE) program is a great way to fund timely work between EPA regions, EPA ORD and states, local communities, and tribes. This program brings local or state concerns to the attention of EPA researchers, and allows all parties to craft research efforts to investigate the problem in more detail and find workable solutions. This is a small program now, but additional funding could help enhance this great program!	It would be good to have some central points of contact so that when individual EPA staff are contacted they know who to forward the request to, someone who can make sure the request does not fall through the cracks. In my office, we get more requests than we can handle, but I am not sure if our managers up the chain are aware of this.	Yes, please see above comments.		
1079	1078	5/18/2017	As a scientist within ORD, there are multiple administrative burdens that are faced by myself and my colleagues that directly impact our ability to do science. We must enter record, and submit time; purchase equipment and supplies; serve as contracting officer representatives and project officers on contracts and agreements (reviewing and championing not only technical content, but administrative issues as well); conduct market surveys; etc. and so forth; before we can do our jobs as scientists. The administrative efficiencies that are supposedly in place only help to a slight degree, and that depends on the staff member(s) we encounter when we take on these "other duties as assigned." Administrative support in ORD does not "support" doing science. Administrative support "supports" doing administrative tasks (and then only minimally at times, again, depending on who you receive to assist with support). Scientists are still charged with getting the work done. The scientific and technical staff are held accountable. We must overcome the	If you want to increase engagement, interaction, and collaboration with States, Tribes, local communities, and the private sector, then let scientific and technical staff work with their counterparts within those entities. Too many times senior administrators/managers set up roadblocks and obstacles that prevent scientific and technical staff from working/collaborating with their counterparts (other scientific and technical staff) at the State, Tribal, local community, and private sector level. Senior administrators should spend more time determining how to overcome obstacles and tear down roadblocks, instead of building them.	Letting scientific and technical staff work directly with their States, Tribal, local community, regulated community counterparts, and the public at large, would be a big step in providing the customer service necessary to support our compatriots and these regulated entities. ORD has a technical support program (TSP) that was developed with the Office of Solid Waste and Emergency Response (OSWER; now the Office of Land and Emergency Management, OLEM) years ago. That program put scientific and technical staff in direct contact with Agency staff requiring the scientific support. It did wonders for supporting the Agency and getting the job done. Unfortunately, the program was only applied to the Superfund effort. It should have been provided to all Agency efforts. That way science would be provided directly to those who use it, directly to the decision makers. Too many times we are faced with	Bureaucracy! There are way to many levels of administration in the way of getting the job done, and getting the job done efficiently and effectively. Too many obstacles in the way of getting the job done; the job of providing sound science to the decision-makers. We need to streamline processes; from funding to administrative burdens. People use Superfund as an example. The Act, the premise, had merit, but the end goal was usurped by others (and I will stay off of my soapbox here), and it became a gold mine and delay tactic to some individuals, while those that were (are) directly impacted and needed (and still need) answers received only limited attention and limited funding. We must	We need to think outside the box in order to address this question. We need to evaluate technologies and strategies developed to address other situations and see what can be applied to resolve the environmental problem(s) at hand. The use of granulated carbon and nanomaterial technologies in certain fields will likely become important remediation technologies in the future. Developing flux-based site management approaches should be seen as inventive ideas and not overlooked by those that favor a more "black and white" concentration based management strategy. Again, thinking outside of the box, developing or adopting novel approaches will likely be key to solving future environmental issues that	Easily. I've talked incessantly about administrative burdens that scientific and technical staff are faced with. These administrative burdens and roadblocks can be obstacles to the success of a particular approach or strategy. We need to minimize the administrative burden on scientific and technical staff (perhaps by pooling limited resources of state and federal agencies and addressing administrative burdens with those individuals wanting to work on that problem) and, in turn, provide support to the scientific and technical staff wanting to address the issue and provide

AMERICAN OVERSIGHT

1082	1081	5/18/2017	Insufficient funding	EPA has an excellent record of partnering with states, local communities, tribes, and the private sector; with many opportunities for such interactions. Reduced funding prevents exploiting the many additional opportunities available.	More emphasis on educating the regulated community as to why regulations are necessary, and the long-term economic and quality-of-life benefits these regulations (which are based on the best science in the world) provide to society. Also, better education of the regulated community of the long-term negative economic consequences of maximizing short-term economic gain at the expense of the environment. In the long term, damaging the environment is very costly - this has been proven over and over again. Take Superfund, for example: billions of dollars have been spent to clean up environmental messes caused by industries that wanted to maximize short-tern economic gains and resisted regulations to protect the environment. Those short-term economic gains were insignificant in many cases to the clean-up costs incurred later. States, tribes, local communities, and the majority of the	Not really. It is na??ve to think this is the first time EPA has considered improving it's efficiency. Only those unfamiliar with the Agency are unaware that improving efficiency and reducing costs while trying to address the increasing demands for adequate environmental protection due to population growth and industrial expansion has been a long-standing goal. The last several years have required that more be done with fewer resources, so increased efficiency has been an absolute top priority of the Agency.	Not that I am aware of. EPA has a long-standing history of utilizing the latest state-of-the-art technology to address environmental problems, and has been very progressive in adopting processes from the business community that have been shown to improve efficiency. As a Federal agency that is constantly under public scrutiny, transparency and accountability are much greater than for the private sector, and extreme efforts have been made to continue to improve these factors when possible.	One of the major impediments to maximizing cross-agency and Federal-to-state interaction and cooperation is the notion that each agency or entity must limit their scope of activity to a narrow interpretation of what is explicitly required under the laws that pertain to that agency. For example, the EPA regulates pesticides, and the USFWS regulates endangered species, but there is a high degree of commonality and interaction between these two areas. A more "big-picture" view that would allow consideration of areas that indirectly (but substantially) have a bearing on the core
1083	1082	5/18/2017	Have a better records management training process that holds ongoing events or have activities reminding folks how and what to mark as records so we aren't stuck filing paper or email records for several hours upon leaving the agency. Have better cross training/succession planning and knowledge transfer of employees' work (via different avenues like short video interviews, employee panels or round tables, white papers on key things they want to share or that they've learned, SharePoint sites or informal lunch n learns, who have historic and valuable knowledge and experiences to share with others before they leave the agency.	First of all, don't let politics get in the way of us doing our jobs and doing them well. Everyone deserves clean air, water and land and should not bare disproportionate negative environmental health impacts because of the denial of global warming or climate change. Whatever one believes is the cause, different abnormal things are happening- more droughts, more floods, more insect diseases like lyme disease from ticks, more negative impacts on water from pesticides that are harming bees and monarchs and other animals in the oceans, and more poor people who are negatively impacted from them - Hurricane Katrina, droughts in the west, and other examples. Support more resources for trust-building, community-based, consensus, facilitation and partnership trainings focusing on better more effective and efficient ways to get	Again, support more resources for community-based,consensus, facilitation and partnership trainings or meetings or job shadowings etc. focusing on better more effective and efficient ways to meet our different customers' needs by investing in areas like conflict prevention and resolution training, alternative dispute resolution, appreciative Inquiry, along with cultural competence and social equity, and train not only more EPA staff, but also invite states, scientists, tribes and local communities and the private sector (like they do on the National Environmental Justice Advisory Council) to attend and build capacity in rural and urban communities to better understand different points of view and how to listen, leading to better customer service that reaches mutually beneficial human health and environmental results, which will in turn help build stronger relationships, safer and more	Create better on the ground marketing of successes and benefits of EPA program campaigns via the regional offices, and bring back grant workshops and the Community Involvement Training that was cancelled, and do a better job marketing benefits of voluntary programs like Pollution Prevention, Trash Free Waters, Reducing food waste, Energy Star or Grant programs like Environmental justice, urban waters, brownfields or environmental education grants with nonprofits, schools, foundations and local business and industry and other organizations, and continue to keep educating youth as well as new immigrants about environmental health risks and also how to save money	Yes teach more employees how to better use the One Drive and organize their files and schedules so they aren't wasting time looking for files or having 10-15 different versions of the same document floating around. Have better streamlined intranets with calendars of major activities or meetings going on to avoid double booking and improve the quality of internal communication. Have better communication from Headquarters on upcoming travel to regions so we are aware of and can consult on visits from the Administrator or others and are in the loop vs. left out and/or blindsided by the media.	Have better leadership investment in partnerships and MOAs and funding and resource sharing amongst different federal agencies. Devote more staff at EPA and other fed. agencies to Smart Growth, Environmental Justice, Conflict Prevention and Resolution, Community based work, and sustainable communities work like contracts and grants and technical assistance to both rural and urban communities of all backgrounds. Get the Corps of Engineers to be more involved and sensitive to tribal treaties and rights and cultures and support more climate and environmental and

AMERICAN OVERSIGHT

1084	1083	5/18/2017		Better environmental results can be achieved by partnering with States and Tribes for EPA funded projects that require reviews under the National Historic Preservation Act, Section 106 Consultation. This law obligates EPA to consult with the State Historic Preservation Officers and the Tribal Historic Preservations Officers and, the Advisory Council for Historic Preservation as necessary. EPA should enter into Programmatic Agreements under NHPA Regulations, 36 CFR 800.14 with SHPOs and THPOs and the ACHP for nationwide application in three EPA grant programs including the (1) Safe Drinking Water Act State Revolving Fund, (2) the Brownfields Assessment/Targeted Cleanups grant program and (3) the CWA Section 319 Non-Point Source Grant Program (but not SRF funding). Such PAs would assure the ACHP that EPA is meeting its	See answer to Q.2. It is equally valid to say this would provide better customer service.	See answer to Q2. It would cost a little up front to negotiate the three PAs, but it would save significant resources in long-run and many projects would not get bogged down with EPA because state/tribe would do the project and the NHPA consultation, which is a much for efficient use of everyone's resources.		
1085	1084	5/18/2017	In the last 8 years or so, one of the biggest barriers at EPA has been the ridiculously poor and ineffective Information Technology (IT) systems/services, networks, applications, patches, IT band-aides, pushes, both computer hardware and poorly designed software/applications that we're forced to use. I could write a book on this subject; yet, I won't!!! EPA's OEI management, operations, OEI's contracts and IT systems ALL need immediate oversight and investigation. There's no doubt BILLIONS of dollars have been wasted in the past 8 years since EPA's IT contracting went external to the lowest bidder!!! EPA's IT systems are beyond cumbersome; 25-40% of staff time is now wasted in limbo trying to use antiquated hardware and software. applications that don't work or respond. Come on EPA, NASA had the IT technology to put a man in space 50 years ago! For instance, having our EPA ID serve as our computer "smart card" for network entry has been one the worst ideas ever conceived and then	REWARD WHAT YOU WANT! All staff that is permanently hired by EPA should have served in the private sector for at least 3-5 years before joining EPA. This should be a requirement for nearly all professional positions! Unfortunately, in some ranks at EPA, there is a type of "white hat" mentality or arrogance that overcomes them: "We're the good guys and anyone from industry is untrustworthy or dirty."	Make EPA managers/staff listen, engage and talk to real people instead of farming out these responsibilities to external contractors. This needs to happen on a daily basis not just 2-3 times a year. Make EPA's upper management go to public meetings and set there for many hours and/or days to listen and respond. I've seen too many EPA managers/staff who want to remain/hide behind their desks/keyboards, avoiding getting out so they can remain in their comfy offices/jobs that require little extra time/effort.	EPA has had a long history of hiring young people directly from the Peace Corp (lacking any private sector experience.) While these are nice folks, they lack real-world perspective and tangible achievements. There's a hiring loophole that permits EPA to hire Peace Corp volunteers directly without advertising the position and/or without open & fair competition. This practice has led EPA to filling its ranks becoming lop-sided with returning Peace Corp volunteers. This practice should be discontinued. Another poor hiring practice of EPA's is that too often professional and management positions are listed without requiring a college education! Yes, you read that correctly! For instance, I've personally	Much like the Obama-care website fiasco, EPA's IT services (+ website) are horrible! While I am not the IT expert to recommend the latest + greatest emerging "IT Best Practices", yet, I do know when something is wasteful, cumbersome and not working nor communicating properly! Pease bring in some real-world tech gurus to dismantle EPA's OEI network and tangled web of IT gobbledygook that we've been forced to endure! BETA TEST ALL EPA applications and websites BEFORE launching them!!! Integrate the systems and databases. Get RID of OLD databases and applications (i.e.Forms and Skillport) EPA's online training is some of the worst ever conceived or launched; it's	This is tough because no one wants to identify genuine redundancies nor cut their budget--it risks their careers/jobs. You'll never get a straight answer from some offices/people. Yet there's so much redundancy across all levels it's nonsensical. Reward "Lean Machines". Engage Universities MBA/Masters candidates or industry assn. (i.e. IEEE) teams to solve and evaluate government programs as case studies or thesis. Create public forums that evaluate government programs and puts them on display--like TED Talks and/or a "Shark Tank" panel. Establish "Blue Ribbon" cross-sectional

AMERICAN OVERSIGHT

	I
1084	
1085	Firstly, 360 evaluations of all managers need to be mandatory! It's too easy for management to spin slanted/positive tales out of total messes. Some folk need to be re-assigned and/or re-evaluated by external unbiased peers and/or review committees. EPA's management is often too risk adverse and usually prefers ONE viewpoint at the table. The government must set up a different value/reward/incentive system for its managers/staff. SAVING MONEY needs to rewarded instead of spending/dumping all the funds by September 30. It must be easier to offload unproductive dead weight (not popular to say out loud). There should be a 3-year probationary period

1086	1085	5/19/2017	The awarding and management of grants could be streamlined and made more efficient. Many of the requirements are related to the Federal Grant and Cooperative Agreement Act of 1977, but it seems that there are processes within EPA???s grants policies that lead to inefficiencies in grants competition and grants management. EPA???s grants management and competition processes should go through the Lean process to identify inefficiencies and redundancies. Current practices make it difficult for applicants that are new to federal grants to have a shot at getting an award. Additionally, from a grants management perspective, EPA???s electronic records systems to not meet the threshold for records retention so we have to still rely on paper files. OGD started an e-records project but it seems to have stopped.	EPA needs to build upon our excellent relationship with state and stakeholder organizations ??? ECOS, NACAA, AAPCA, ASTSWMO, API, AWEA, Edison Electric Institute, AWWA, etc. EPA???s various media offices already have strong relationships with these and many other stakeholders, whom we engage with whenever we make major policy decisions. The current administration would be well served to listen to the voices of ALL states. EPA could do a better job of coordinating efforts with states and local on compliance assistance and enforcement. Eliminating OECA would completely run counter to EPA???s ability to accomplish this and cooperative federalism. Also, it???s doing things like this that undercut EPA???s ability to effectively work with stakeholders to accomplish our shared responsibilities of	We need to improve our websites and do a better job of telling the story of the continued importance of protecting human health and the environment. We need to share our data on our website, unless it is proven inaccurate or false. This includes maintaining our world-renowned climate change websites and data. When there is strong consensus in the scientific community that global warming is happening and it is influenced by human activity, it sends a false message to the American public and international community when EPA removes these websites. Ignoring climate change is dangerous to the coastal communities that are already feeling the impacts of climate change (and others impacted by more severe storms/droughts), and it puts American workers at a disadvantage economically when we ignore the rapidly growing renewable fuels industry (over 370,000 people employed in solar energy compared	EPA should continue to utilize Lean to identify inefficiencies and to seek process improvements, https://www.epa.gov/lean. I think this would be highly beneficial to the regions, who tend to be operating with less but can be more important in our interactions with states and communities. Also, reviewing our regulations periodically to identify inefficiencies, while ensuring they are legally sound and protective of human health/environment, will be beneficial. EPA does need to do a better job of this when introducing new regulations. However, an arbitrary removal of 2 regulations for every 1 new one is not helpful to the American public. This also will likely hinder economic growth by	I think EPA could take more advantage of mobile technology; especially if there is a way to improve our network capabilities without sacrificing security. I find that when I???m not directly connected to EPA???s network (i.e., at my EPA desk), it can be extremely slow to access various EPA networks, which can make it less efficient to work from home even though nearly all of my work is through the computer.	I think it comes down to communication, especially when it relates to enforcement or compliance assistance. We have strong partnerships with states and their various organizations, but the one thing they tell us time after time is, ???no surprises.??Â Most states appreciate what we do and rely on us, but it undercuts this relationship when they are not consulted on EPA actions. I think EPA already does a solid job of working with federal agencies where we have shared responsibilities (such as with DOE and DOT on fuel efficiency standards; NOAA and USGS on the Chesapeake Bay; etc.). I think the
1087	1086	5/19/2017	Just to much management and micromanagement. Do we really need all of these deputy positions, especially within the regions.	No opinion	No opinion	Get rid of unnecessary internal programs reduce other internal programs. These are programs such as internal communication, best places to work, process improvement (which in most cases produces nothing). Reduce the laboratory cost by reducing the number of laboratories to possibly a few strategically places labs. Could also look into partnering with other agencies for shared labs.	Further expand the use of O365 in eliminating the need for Shared Drives such as the F and H	Reduce the laboratory cost by reducing the number of laboratories to possibly a few strategically places labs. Could also look into partnering with other agencies for shared labs.
1088	1087	5/19/2017	-Most of my duties require concurrences, which are all paper-based. Perhaps concurrence packages including signatures could be processed electronically? This could be done via a sharepoint site, where the person requesting the concurrence posts the docum		-Sharing of contacts between EPA and State partners for various outreach activities (State primacy?)?	-See suggestions made under Q1. 1089	1088	5/19/2017	CaseMap. CID-HQ purchased licenses for a database program called CaseMap. It is a LexisNexis product that was developed for attorneys (not agents). CID management pushed this program onto the field staff and required that it be used to justify the $70,000 (approximate cost) price tag. The first reason given was that the US Attorney's office used it and wanted our cases in that format. The US Attorney's Office does not use CaseMap. The program is very cumbersome and not user-friendly, and the cost way exceeds any advantage used to justify the needless expenditure of funds we desperately need to run our organization.	There are not enough State/Local/Tribal criminal investigators to do the work CID does. The "ramp up" time to get the State/Local partners to the point they could begin to investigate environmental crimes would be measured in years. And, there are State/Local partners who don't have the money or desire to investigate environmental crimes. They are too busy chasing pedophiles, murders and drug dealers to deal with these types of crimes. In an ideal world they would, but simply don't have the time or resources.	We do a good job now.	Yes. EPA-OCEFT has a section called Professional Integrity and Quality Assurance (PIQA). That group has a GS-15 Special Agent in Charge and at least three agents at the GS-14 pay grade. I believe OPM requires a GS-15 to supervise more than three subordinates in order to justify a GS-15 pay grade. And EPA has an Office of Inspector General (OIG) that does the same job so why are we paying a GS-15 ($160K) and three GS-14s ($145K each) to do a job we already have covered with the IG? That is a huge waste of precious resources. Move the PIQA SAC to the field along with the agents so they can investigate environmental crimes or put them on Administrator's Pruitt's protective detail that	Move the CID agents into to "domicile" status at their homes and shut down the expensive office space we lease. The agents can take a tax break for a home office and EPA can cut millions in lease dollars spent. CID has been made to downsize the vehicles and in most areas that need 4x4 vehicles, can't get them. Law enforcement can not be accomplished in an electric Smart car. A slightly better vehicle could be achieved with home offices.	
1090	1089	5/19/2017	EPA's IT infrastructure is so old that tasks take much longer than they should. I believe that OEI's position of decentralized management is both more expensive than a centralized IT operation, and inefficient as a management procedure. Decentralization is inefficient and lazy.	Centralize all IT operations.	Provide an infrastructure powerful enough to support putting all services in the cloud, and before OEI disagrees arbitrarily, wall Ethernet ports are still CAT-5. CAT-5 was really good...in the 1990's.	EPA should stop all funding to in-house software, and move to SaaS for everything.	SaaS, modernized infrastructure that can support the move to cloud (it doesn't yet), find a solution that can replace the antiquated idea that network drives are a good idea - perhaps a DM system.	Partner with other agencies for a service desk that isn't terrible. EZTech is the absolute worst helpdesk on earth. Clearly their only metric is how many tickets they close, and how fast. Service is secondary or tertiary to actually solving problems. Basic IT language is beyond their comprehension.

1091	1090	5/19/2017	The OCFO systems governance process is a significant roadblock in the ability to work efficiently and address issues timely. The process has too many layers (ex. FRB, Stakeholder meetings, rankings, etc.) that impede the progress of getting work completed. In the past we were able to work directly with staff to address OCFO system issues generally within a few days and the overly bureaucratic process in place now can take a month for one of the groups to review and discuss an issue. The process needs to be addressed and only items that are of significant cost or time to address should be put through the governance process and operational issues that can be resolved with FTE in place should be moved forward immediately.					Efficiencies could be gained by consolidating administrative functions across the agency. For example, OCFO and OARM could be consolidated into one organization and would serve as the administrative arm of the agency. There are several functions that overlap between the two regarding financial controls, contracts, human resources, etc. In additional, all IT functions could be consolidated within OEI. For example, OARM has Information Resources Management Divisions (IRMD) in RTP, Cincinnati and HQ that perform IT functions that are already provided by OEI. Also, OCFO maintains an
1092	1091	5/19/2017				There are plenty of opportunities to reduce inefficiencies at EPA. Some of them would include automatic timing to shut off non-essential lights at the end of each workday and over weekends. Many lights stay on overnight and likely add up to significant costs over a typical year. There can also be significant workspace reduction done, especially at headquarters. This could include desk sharing (especially relevant for those who telework 2-3 days each week), reduced workspace areas allocated per individual, more open workspace designs, etc. For a range of options developed by GSA see https://www.gsa.gov/graphics/pbs/Innovative_Workplaces-508_R2OD26_0Z5RDZ-i34K-pR.pdf

1093	1092	5/19/2017					I am sending this message in full seriousness. Can we please equip the garbage cans (those pushed around by cleaning staff) with soft, air-filled rubber wheels that don't pollute the hallways and offices with extremely loud rattling? This often results in moments in meetings where a speaker cannot be heard, and those calling-in lose touch from the meeting. I'm sure there are many others that would support this change to alleviate this daily annoyance.	
1094	1093	5/19/2017	1. The way PeoplePlus is used currently requires a lot of unnecessary re-work. We have to submit our time early, typically 2-3 days before the end of the pay period, requiring us to forecast our hours for the next 2-3 days. If we end up sick in that time frame or decide to take annual leave, the timesheet will have to be revised the following week, which requires the employee and timekeeper to interact with PeoplePlus again. In the private sector you do not submit your hours worked until after you have actually worked them! Why are we doing this? This shouldn't be allowed! 2.ORD uses matrix management which includes multiple layers of management intersecting at various levels making it very confusing. The private sector tried matrix management years ago and abandoned it. Yet ORD adopted it 5 years ago or so. Ask any one rank and file employee how it works and no one will be able to describe it. Please get rid of this management approach adopt a simpler management framework. New			More cooperation and sharing of resources is needed for the ORD laboratories. Each one has unique capabilities which should be made available across the labs. To do this they all need a common framework to allow for "customers" (scientists across ORD) to access these capabilities. For example, one lab may have capabilities to analyze for stable isotopes that others don't have. This lab should behave like a commercial lab for others across ORD. Very little of this is being done.	We tend to lag in technology and supporting software. We are still using Windows 7 and IE11. IE11 has a hard time opening documents on line. As such many of us switched to Google, which will now be rolled out to all us. Thanks! Video conferencing with the Tandberg system usually has technical difficulties with poor video and most always poor audio. I don't know if it's due to the users or the system itself but it needs to be addressed

1099	1098	5/19/2017	Political appointees ignoring peer reviewed science is HORRIFIC. I would fire them and replace them with someone who cares about the environment and human health and not stuffing their own pockets with money.	More funds dedicated for collaboration on children's environmental health issues. NOT removing the clean power plan. Aggressive climate change policies. no DENIAL of science.	Fully staffed EPA, with at 16,000 employees. Cutting FTE will only reduce EPA's ability to reach our constituents	FIRE POLITICAL APPOINTEES that clearly do not care about human health and the environment.	When an EPA employee has to travel, let them use the internet to buy a ticket. It is much cheaper to have a change fee than a fully refundable ticket.	FOCUS ON CLIMATE CHANGE.
1100	1099	5/19/2017	Roles and expectations for various parties within each program are not appropriately defined and focused on the work at hand. Non-technical managers trying to manage workload and highly technical staff blunder about and actually hinder the progress of work to be done. Another example involves legal counsel not merely providing counsel on their review of technical deliverables, but instead, staff lawyers spend way too much time rewriting each aspect of a technical letter (not legal documents) so that the technical points are lost in communication and the deliverable is seriously behind schedule.	Nationally, we want to provide expertise for our state partners, while assisting them in conducting their work! Partnerships are so important in terms of value added and that is the key for shared goals between partners. Companies want a level playing field and consistency across state boundaries, and that can be achieved when EPA offers and States/Tribes/Local communities accept the assistance of EPA with our partnership in mind (on both sides, we must identify and acknowledge common ground - and win/win scenarios).	Workshare agreements have worked in the past to help communicate roles, expectations, and objectives for each party. It seems these instruments are no longer used in some programs and communications have stalled at higher levels of management.	Yes - but each program office should explore options from the ground up to best identify current changes you ask about.	Yes - we live in a computer age and yet EPA is behind everyone in terms of electronic structure to replace traditional paper filing. Tools we have just been given recently are limited in options for use and in fact already outdated by the time staff learn how to use them. Updates to regulations for e-reporting were on the verge of improving things, but have been on hold since December due to the change in administration.	Believe we already do this to a great extent with our states, so not sure here about realigning.
1101	1100	5/19/2017	(a) EPA has created Confidential Business Information (CBI) regulations and internal policies which greatly exceed the statutory protections Congress provided in the Trade Secrets Act and prevent efficient sharing of investigative information with federal law enforcement colleagues. EPA???s CBI regulations should be revised to allow for information-sharing with other federal and state law enforcement organizations, so long as appropriate practices are in place to ensure confidentiality. (b) EPA does not efficiently and effectively perform mission support functions such as the provision of IT tools and services, contracting, and personnel actions (across the board, from hiring to discipline/firing). I have two general suggestions to address these problems. First, the relevant offices should be adequately staffed and structured so that they can perform their required functions. (More front-line staff and fewer layers of	Our partnerships with states include the delegation of authority to conduct a great deal of the nation???s pollution control work, along with continued federal oversight and enforcement to ensure that national environmental standards established by Congress and implementing EPA regulations are not diluted or disregarded. Each year for the past decade, EPA???s Inspector General has included among the major management challenges facing EPA the ???Need to Improve Oversight of States, Territories, and Tribes Authorized to Accomplish Environmental Goals.??Â In my view, EPA often falls short in this regard because it is unwilling to communicate frankly and publically about the challenges that states face. I would address this problem by finding new ways to communicate	My first idea is to reverse the order of that list of stakeholders: per our statutory directives from Congress, EPA is charged with protecting human health and the environment; ???the public at large??Â should therefore be the primary beneficiary of EPA???s work, rather than the last in line. Second, I would recognize the limited applicability of the concept of ???customer service??Â ??? a private sector/commercial concept ??? to improving the effectiveness of a federal executive branch agency charged by Congress with establishing and ensuring compliance with pollution control requirements. That said, each of those referenced constituencies is critically important to EPA???s work. My overall suggestion is that EPA continually strive to improve its standard-setting and compliance/enforcement work, aiming for thoroughness, expeditious	Yes ??? see response to following question.	Yes. On the technology front, accelerating the move to electronic reporting by regulated entities will save the regulated community money and allow EPA to more quickly and thoroughly evaluate self-reported pollution data. On the process front, as the recent OIG report on 2017 EPA Management Challenges observed (as it has every year for the past decade or more), the EPA ???needs to improve its workload analysis to accomplish its mission efficiently and effectively.??Â In addition to conducting workload analysis that would allow more strategic decision making about the allocation of scarce resources, EPA could also be more accountable to the public and to our state partners if	As referenced in the answer to question 2, I would suggest that EPA attempt to accomplish more where we share responsibilities with states by increasing frank and public communication about the challenges that states face. For example, every state has at least one delegated or authorized federal pollution control program and therefore faces the need to address intentional (i.e. criminal) violations of those laws. But although every state has environmental regulators, relatively few have environmental crime fighters. In fact, most states

1102	1101	5/19/2017	Management directives that would require the agency to change it's position on a particular point of law should be vetted thoroughly with EPA's Office of General Counsel, OECA and our partners at Department of Justice to avoid unnecessary disruption in ongoing enforcement actions and litigation. Proposed changed in policy going forward (what the law or regulations should be) should be clearly distinguished from the current state of law that we must currently enforce (what the law is).	EPA should support delegated state environmental programs to the maximum extent it can, while also recognizing EPA's important role in ensuring that a national baseline of environmental and human health protection as envisioned in our federal environmental law framework is achieved. When state programs struggle from limited financial, technical or legal capabilities, EPA must serve as a backstop to ensure adequate and appropriate responses to environmental disasters and instances of non-compliance. For example, many states do not have sufficient resources or legal authority to adequately investigate and prosecute the most egregious, criminal violations of our environmental laws. EPA's Office of Criminal Enforcement, Forensics and Training, along with their partners at the Department of Justice and U.S. Attorney	The agency's website should continue to be a clear and transparent way for the public to understand the scientific and legal basis for the wide variety of environmental topics that EPA administers.	EPA has been operating on a very lean budget with no significant increases for nearly a decade. While some additional opportunities for increased efficiencies may be identified, it is difficult to see how we can cut much more and still maintain environmental protection for all Americans.	One technology issue that could make a big difference in day-to-day productivity is providing EPA employees with the ability to securely access their government e-mail accounts form a personally owned smartphone device. Currently, access to e-mail is only available from a government owned laptop or smartphone, or a personally owned PC. Very few EPA employees are provided with government owned smartphones. EPA employees in the field without a government owned smartphone are often in places where it is inconvenient or impossible to use a laptop or PC. It seems that other federal agencies have found ways to allow secure access to government e-mail accounts	
1103	1102	5/19/2017	First of all, I would like to say thank you for this opportunity. While many people may not respond to this for fear of it not being anonymous (and anyways ??? depending on responses ??? writing style and context provided in answers can often identify someone even if anonymous was the sincere intent) and many people may choose this as a forum to vent all sorts of gripes ??? I am choosing to take your actions simply at face value. I am glad that you are seeking feedback from all employees ??? because our management culture I think often will just choose to tell you what they think you want to here and also quite frankly is not often in touch with issues in their own organizations. I cannot remember the last time EPA did 360 feedback on managers or whether it ever has. I have worked at EPA for a little over 10 years and have an MBA from a top school. I have also worked in a variety of positions in the non-profit and private sectors. I have worked all sides of the	Well, I think first we need to decide what results we want to see. Or maybe really what results we want to focus on. I know that regulations govern to some degree our priorities and resources limit our abilities to achieve everything we might like to achieve in a finite timeframe. But surely, e.g., we can find 1-2 things every year beyond the routine must do???s that we can all agree to focus on to drive to a higher level of results. I can???t speak to all state government cultures, but in my own office we seem to lack ability to focus. If you try to achieve 10 major efforts all at once with a staff of 2 and next to no funds, you are likely bound to fail. I think we have a real internal management problem where to do lists are developed but then thrown to the wind / forgotten. Or - EPA may write strategies that	While I think individual pockets can be helpful in their own right, you can???t improve customer service across the board and you certainly can???t build off that or track your results without a system. The Agency recently bought Salesforce ??? the number one CRM platform. I don???t know what better platform to deliver customer service across the board from. I have implemented in my own program and had amazing results. An internal enterprise Salesforce system would also help with my comments under Item 1 ??? with getting better answers to internal questions. However, too, see comment 4. I think before we go charging into serving ??? we may first need to fix out processes through efforts such as LEAN.	I think greater implementation of LEAN throughout the Agency would be great. However, see my comments under #2 ??? you don???t want someone LEANing a process who can???t think a process through. Unfortunately, I think we have way too many staff who just know how to push paper rather than want to or care to ask if they can???t do something better. I am not necessarily implying that they are not intelligent ??? I am saying you get what you pay for. And I don???t necessarily fault someone for just wanting to come to work, do what they???re told and go home. Heck ??? on my own accord I worked uncompensated overtime for 3 years to LEAN my program ??? while	I think we are already pursuing a lot of them ??? shared services, LEAN, etc. We just need to do more. I am heartened by the recent acquisition of several cloud service providers, which could hugely benefit our work internally and with our partners. EPA unfortunately has a tendency of poor IT implementations for those services that are inwardly focused (reiterating comment above ??? people are put in charge without the proper skill set; management doesn???t know the difference). Inwardly focused IT implementations would do much better if they sought feedback from / involved in their development actual EPA users.	I???m not actually sure if we have any one group just focused on service across the board with our partners / potential partners. We I think ping them all separately ??? i.e., we have OW, OAR, etc. all working separately with the state of X ??? but no one group maybe trying to work with the state of X at a high level to identify concerns / cross-cutting issues, etc. I think maybe ECOS kind of serves in this capacity I guess for the states. But I still wonder if something more might be helpful. It would be a near impossible job to accomplish, though, unless say we were tracking at least at some high level in a customer

AMERICAN OVERSIGHT

	I
1102	The LEAN program has been a very useful in streamlining agency processes, particularly in laboratory organizations.
1103	Salesforce. We need a wider implementation of Salesforce like that pursued at USDA and FDA.

1104	1103	5/19/2017	Centralization of certain functions both outside of a Region (or within a Region, but outside of a Division) have removed people with first hand knowledge of personnel needs (such as hiring or travel) to a distant employee who may not answer telephone or email. While in most instances such organization works fine, in certain instances, it removes accountability to the requestor. It wastes productive time as there is a greater need (and more steps) to find out the status of a request.	States, tribes, and local communities already provide assistance to EPA, but will not be able to assist in achieving better environmental results until they have more resources. In programs I am familiar with, the private sector actively works to problem solve and find cheaper and equally appropriate outcomes. Relationships with most are fine; for those who do not care about the environment, closer coordination will not result in a better environmental result.	More employees to interact with these communities. Employees are addressing statutory requirements and are stretched thin.	Personally, I think there are too many people in HQ who do not deal directly with constituencies. In most instances, direct interaction with other levels of governments, the regulated community and other stake holders occur at the Region. However, I will admit that I may not understand what the needs are that resulted in creation of their jobs.	See answer to 7 below.	I am not aware of any.
1105	1104	5/19/2017		We need more peer reviewed studies to identify potential advancements that are based in science. In addition, I think that program evaluations to identify what is working and what is not would be beneficial to the organization. Finally, we should use evidence in budget decisions.				
1106	1105	5/19/2017				In the Contractor Laboratory Program (CLP), matrix spike (MS) and matrix spike duplicates (MSD) are performed per sample delivery group, on PCB and pesticides organic laboratory analysis. This is very costly, and MS/MSD quality control is not cost effective. MS/MSD has ben eliminated on all other organic analysis but PCB and pesticides, and should be eliminated for PCB and pesticides. Field duplicates analysis for CLP organic and inorganic analysis should be eliminated. Field duplicate samples are a GREAT expense, and little benefit since the data is not qualified due to Field duplicate analysis.		

AMERICAN OVERSIGHT

	I
1104	There should be a focus on records retention and records management. Many other agencies are far in advance of EPA on this and electronic collection of documents for FOIAs and litigation.

1107	1106	5/19/2017				In the Contractor Laboratory Program (CLP), matrix spike (MS) and matrix spike duplicates (MSD) are performed per sample delivery group, on PCB and pesticides organic laboratory analysis. This is very costly, and MS/MSD quality control is not cost effective. MS/MSD has ben eliminated on all other organic analysis but PCB and pesticides, and should be eliminated for PCB and pesticides. Field duplicates analysis for CLP organic and inorganic analysis should be eliminated. Field duplicate samples are a GREAT expense, and little benefit since the data is not qualified due to Field duplicate analysis.		
1108	1107	5/19/2017	There is way too much mandatory annual administrative training. Such training should be required once for new employees, with refreshers at five- or ten-year intervals only. Accreditation procedures should apply only to regulatory activities, not to screening-level projects.	We should be able to provide reasonable technical assistance to all governments who request it, regardless of the level of advocacy from EPA program offices. Our travel budget should be increased to enable this assistance.	Increase our travel budget so that we can spend more time on the ground out among our stakeholders.	Prohibit contractual components in state grant programs.	We need to continue to push the envelope on remote sensing, real-time data acquisition, and GIS modeling to better target our efforts at environmental compliance assistance.	We should increase our emphasis on technical assistance to geographic programs such as the National Estuary Program.
1109	1108	5/19/2017	I object to requirements that we as EPA staff must get approval from headquarters before making public statements. Such requirements are burdensome and unnecessary and undermine the Agency's commitment to transparency. EPA has always prioritized communication with stakeholders -- members of the public, members of the regulated community, state & local governments. Requiring HQ clearance for too many categories of communications will censor the Agency and interfere with the public's understanding of what we do.	We need to maintain funding for EPA programs that support development of legal infrastructure at the state and tribal levels, so that those entities can effectively enforce and implement the federal environmental laws entrusted to them. EPA must be able to maintain its oversight of programs delegated to the states, so that the private sector is certain of national consistency.	EPA needs to improve its transparency and communication with stakeholders and the wider public, so everyone better understands what EPA is doing, the bases for EPA action (peer-reviewed science and the rule of law), and the implications of those actions. In particular, EPA should do a better job of communicating the economic and public health benefits of our regulations, which have been proven by peer-reviewed studies.	Strengthening EPA's enforcement work would increase compliance and therefore reduce costs, to the Agency, the private sector, and the public: non-compliance by industry leads to increased costs responding to accident and releases.	EPA is often overwhelmed by document reviews necessitated by FOIA requests and discovery processes in litigation. If our IT resources and records management practices were updated to be more effective and efficient, we would be in a much better position to respond quickly and with a minimum of Agency resource.

1110	1109	5/19/2017				The Administration should consider revising Executive Order 12372--Intergovernmental review of Federal programs and OMB???s Common Rule implementing the Order to foster a more cost-effective means of providing elected state and local officials with opportunities to consult with EPA and other agencies on Federal financial assistance programs. EPA???s regulations adopting the common rule are at 40 CFR Part 29. The burdens imposed on the public by these regulations could be substantially reduced by eliminating unnecessary requirements and authorizing the use of modern technology. One of the key components of the intergovernmental		We should consider implementing terms and conditions more consistently across the Federal government. For example, indirect costs (IDCs) may be handled differently by each Federal agency, and it is enough of a difficult topic that it could be difficult for recipients to comply with managing their IDCs one way.
1111	1110	5/19/2017	OECA's No Action Assurance policy makes property transactions, specifically the reuse on partially contaminated properties (Brownfields, and former Superfund) much more difficult than it should be. The No Action Assurance Policy says that, outside of a formal settlement agreement, EPA will never tell a party purchasing a potentially contaminated site that the Agency won't pursue them for additonal cleanup even if the party has taken all reasonable steps to assure that contamination won't be spread. This prohibition against providing assurance to a party in a simple comfort letter holds true even if the EPA has determined that it doesn't a case to pursue against the party. Revise the No Action Assurance policy to state that parties that jump through the bona fide prospective purchaser (BFPP) hoops will be given a letter that says, unequivocally, is not a liable party. Make this apply to lessees as well. BFPP hoops could be streamlined as well: e.g. EPA regs require a BFPP to hire an

1110	It would greatly help if we could hold people more accountable for their work, and/or more easily fire staff for non-performance. There do not currently seem to be repercussions for staff members who do not perform well (or at all) and there is too much work to be done to allow anyone to choose not to perform.
1111	

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1112	1111	5/22/2017	PARS, the annual performance review system, is not necessary because it appears to be valueless. When a supervisor makes statements to his staff member such as "You have to walk on water to get an Outstanding" or "I gave you the same evaluation I received", that is indicative that PARS is a useless requirement. Also, preparation of a Weekly Report for management is a very reasonable requirement - - - if management actually reads the report. If a Weekly Report is required because that's the way it's always been, then that would not be an optimum use of a staff member's time.	Partnering - a relationship in which there is mutual respect - must first start within EPA. Being a supervisor should not be a license to speak to staff disrespectfully. It is never appropriate to publicly embarrass an employee. Should there be mandatory refresher training for managers?	PARS is an annual and arbitrary event. If it could be replaced with the previous performance review system, which was simpler and worked, morale and productivity might increase. Also, there is a required template for five-year reviews for Superfund sites, so why does each and every draft five-year review need to be sent to HQ for review? Let's think about streamlining the five-year review process.	PARS involves 2 meetings/year between an employee and his or her supervisor and the generation of a significant amount of paper. Unfortunately, it is not does not appear to yield any value whatsoever to the taxpayer. Does EPA need to spend the man-hours and paper to memorialize favoritism? The previous performance review system was much better. Also, the procedure for initiating an Interagency Agreement (IA) with another fed agency appears to be very time-consuming and steeped in "CYA". Doesn't it make sense for federal agencies to work together? Initiating an IA should be easy, not excessive. Let's spend time on getting valuable work done. Taxpayers want results, not	What about an anonymous electronic suggestion box that is always available? This current survey is great, but it seems like a rare event. An always-available suggestion box could increase accountability.	Not sure.
1113	1112	5/22/2017	EPA uses outdated software that is not user friendly. Instead of using maxiflex and peopleplus, employees should track their time in one system. The Concur software is overly complex and inefficient. Also, I spend so much of my day drafting briefings to the political appointees in Washington that it is difficult to complete substantive work. The new administration should delegate so as not to inhibit the process of regional work.		The one factor that I see limiting my ability to service tribes, local communities. the regulated community, and the public is lack of adequate funding. Personally, I am not authorized to attend meetings with regulated entities on enforcement activities and compliance assistance matters because the Region does not have sufficient funding. Similarly, work slows because Agency employees are assigned to too many matters. The Agency, the environment, and the public would benefit from additional qualified, hard-working employees.	Increase salaries to attract better talent. The Agency should be hiring only the best scientific and legal talent. Promotions should be merit-based and the Agency should use its authority to terminate people that do not perform their job efficiently and effectively. Employees should not be allowed to take undue advantage of Flexiplace. The Agency should somehow limit Flexiplace so as to allow episodic Flexiplace only or to cap the number of hours that an employee can work remotely per day.		

AMERICAN OVERSIGHT

	I
1112	Just brainstorming, if managers needed to attend mandatory refresher training, and if they had a trainer speak to them in a disrespectful and hurtful way, instead of in a professional manner, then maybe the manager would see how it is when they act that way. If managers could be reminded to speak in a tactful way, then there might be fewer complaints from employees.
1113	

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1114	1113	5/22/2017	The Region 2 travel help desk (increases work for those who know how to do TAs, process is slow, and often TAs are incorrect) was put in place because managers want to rubber stamp Travel Authorizations instead of being accountable for reviewing them. The service should be optional and not required. If Managers are responsible for certifying hours in People Plus, then what is the need for timekeepers? Timekeepers often send needless (sometimes 7 in a week) reminders to staff to do People Plus. People who forget to certify their hours on time should just be paid late and then they will never forget again. We are supposed to be professional adults here, not children who need constant reminders to do things. Coordinator roles for programs within EPA (e.g., environmental justice, children's health) are unnecessary and lead to grade inflation (GS14s). Instead, there should be workgroups of people whose jobs actually are impacted by the	Move away from block grants. Tie state grants to performance for individual actions. The move to block grants has lead to states knowing that they can ignore parts of the performance partnership agreements and still get all of their money, so they ignore EPA requests to do what they are supposed to. This is bad for the regulated community since the states can take longer to implement a regulation (leading to inconsistency or what appears to be condoning noncompliance with federal requirements). For example, delays of states to adopt new standards or requirements in their state regulations.	The practice of going through HQ for things (e.g., public affairs) slows the process and makes Regional offices less efficient and responsive -- prolonging responses to the media and public at large (including the regulated community).	Less management layers (management does not do day to day work and creates unnecessary layers. For instance in Region 9, the Region switched to Offices instead of Branch/Sections -- This level of management seems better than the extra Section/Branch structure. Also enforcement is better when integrated into the program office instead of its own separate entity. People can have both skills (program and enforcement) instead of overspecialization and be able to follow an action from program through enforcement and back again (better for regulated community). But multi-media is too much (master of none) because then staff cannot learn anything well.	Tablets for inspectors (would allow inspectors to have complete regulations at their fingertips and make report writing faster). Would not need to have cameras as a separate piece of equipment (tablets are all in one).	Coordinated planning for monitoring and inspection needs to be flexible. For instance, water quality monitoring can be planned in advance whereas inspections can be targeted based on new information (e.g., non-compliance, PFOS/PFOA).
1115	1114	5/22/2017	One of the greatest challenges facing this Agency is the oddly out-of-balance world of public sector employee unions. While understanding the importance of ensuring a federal workforce that is apolitical and having mechanisms in place to ensure employees do not suffer from political retributions from changing winds in DC, the over-emphasis this Agency has placed on supporting employee unions has simply gone too far (and remarkably Agency management under both parties goes along with it!). The rules and regulations for addressing performance or conduct matters for underperforming employees are byzantine to say the least. The number of safeguards (mis)used by these employees and their unions make the most basic management functions many times more difficult than they need to be are incredible! While the Administration and Congress look at the larger issue of how employees can challenge adverse actions (through the MSPB, EEOC, OSC and any number of other alphabet soups out there), the	We certainly should look to ensure more effective partnerships with our state/local and tribal partners. However, the nature of our work at the EPA does in fact require a significant federal involvement. The rationale for this is simple: pollution knows no geographic or political boundaries. What happens in one city or state has absolute impacts on neighboring states. However, the important difference is that the neighboring state has little recourse to correct the problem. Additionally, state and local governments have been tightening their belts for a number of years as well. There are simply not the resources at the state and local level to address the critical issues EPA deals with each and every day. I fully acknowledge that EPA has had instances of ???mission creep??Â into the areas of ???nice to do??Â rather than the	I???m not sure ???customer service??Â is the right description for what we do as a federal regulatory agency. Customers are generally defined as ???a party that receives or consumes products (goods or services) and has the ability to choose between different products and suppliers. The second part of that definition is key. We are not making and selling widgets. We are charged with implementing environmental statues passed by Congress and signed by a President. Creating regulations ??? then enforcing them ??? are key to how a regulatory agency works. The notion that our customers (in this case the American people) can take their business to a different source is not realistic in our case.	I think some of the proposals put forth by the Administration are in fact helpful redirection of limited resources. Program like Environmental Justice, Energy Star, Bees and Other Pollinators Protection, BurnWise, Children???s Health, Environmental Education, Homeland Security, the EPA libraries, and the Sun Safety programs are all well intentioned, but I???m not sure are required (at least in their current form). These redirect badly needed resources from critical areas such as effective and efficient rulemaking and enforcement.	A basic IT infrastructure that works would be a real shot in the arm!	I think we should certainly look for any ways we can leverage our resources with our federal/state partners. However, the reality is EPA is charged with implementing and enforcing federal laws for a reason. The idea we can simply turn 1/3rd of the Agency???s responsibilities over to the states is not a realistic paradigm if we are to in fact protect human health and the environment.

AMERICAN OVERSIGHT

	I
1114	Less management layers. Empower employees to send correspondence out under their own signature (leads to more individual accountability). Delegate down whenever possible (e.g., regional pretreatment under the NPDES program to division directors).
1115	I???m going to answer the inverse of this question (sorry!). EPA has suffered for years as the most stove-piped, badly run organization I have ever seen. While everyone works towards a common goal of protecting human health and the environment, the reality is we are a loose confederation of programs and statutes joined by a common letterhead. Part of this is by the nature we implement our laws. Each AAship has its own authorizing statutes and will implement them as they see fit. I can understand and appreciate that to a certain degree. Work that is done under the CWA may have little to no impact on work being done under the CAA. Where EPA falls down

1116	1115	5/22/2017	CERCLA: Five Year Review Process - Presently, one of the tasks to be documented as part of the 5-yr review process is to answer whether there are any new rules or circumstances that call into question the protectiveness of the remedy. As part of this analysis, the human health risk assessor looks to see if any standards have changed, in particular any standards that have been adopted that render the afore selected cleanup levels, no longer protective of public health. This is good step but it doesn't go far enough into reviewing how the remedy is progressing against the cleanup levels as laid forth in the ROD. With just a bit more work during the 5-yr reviews, we could save much time and money in CERLCA cleanups, if an evaluation of risk to public health using concentrations present in the environment at the time of the 5 year review were to be performed and compared to not only the current ARARs, but also used to re-evaluate the protectiveness finding (namely, ask			CERCLA: Five Year Review Process Presently, one of the tasks to be documented as part of the 5-yr review process is to answer whether there are any new rules or circumstances that call into question the protectiveness of the remedy. As part of this analysis, the human health risk assessor looks to see if any standards have changed, in particular any standards that have been adopted that render the afore selected cleanup levels, no longer protective of public health. This is good step but it doesn't go far enough into reviewing how the remedy is progressing against the CERCLA requirement to achieve a "protective remedy" (e.g. a cleanup that falls within the 10-4 to 10-6 excess cancer		
1117	1116	5/22/2017	I am a proud supporter of the President and the Administrator; therefore, I want them both to succeed. I can tell you this from the "rank and file" perspective, the regions and other managers, particularly the regions will NEVER execute the President and Administrator's vision. I would recommend until the Administrator is able to implement the President's vision, that funding, in particular, for the remaining of FY 2017 be solely managed directly from EPA-HQ where the Administrator can keep close taps on the programs. If the Administrator doesn't do this and continues to forward funding allocations to the Regions, they will fund known and secretive projects to keep the President from implementing his vision. Hopefully, by the time the new fiscal year begins in October 2017, the Administrator will have more staff in place and has a better handle on how he wants things to reflect the President's budget. Most if not all the managers (even to the lowest ranks) have been promoted because they are a part of the	Eliminate duplicative efforts. I have experience in processing grants in the past, and I have first hand knowledge that there is a tremendous amount of duplication. As EPA moves forward, I would suggest having a grant processing center where all employees processing grants are in the same location and can process the grants as grants AND not as cooperative agreements. There is a difference in these two labels. Also, please STOP the ACS reporting and bean counting for inspection. They both have NO value. Find a better way to empower employees to upload and certify their own inspections. Direct interaction, less inspections except for oversight or as necessary in case of public health concerns.	Have one point-of-contact for each program and all supporting personnel works with that individual to ensure transparency and to meeting programmatic deadlines.	Instead of having SESs be burrowed in managing staff and them not be spark and innovative, I think it would be great to only use SES staff for high profile and specialty assignments. For example, the Flint Michigan situation should have an SES assigned to that region for a specific set of time to assist and oversee the entire cleanup project. Let the SES be responsible for taking on assessing major conflict projects and opportunities and outreach for the Agency. For individuals who are as highly paid as the SES, they should be challenged more and rotated more and NOT burrowed in. Make it mandatory that SES can only stay at EPA for 3 years maximum and then must rotate to another Agency.	Not sure	Remove duplicated efforts among agencies.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1120	1119	5/22/2017	Contracting at EPA is a major challenge. The contracting staff are under-resourced and often ill equipped to help get things done in an efficient way, and in the last several years, there have been many major contracting snafus that resulted in stop-work or loss of software maintenance or other types of issues due to the processes taking far too long. Contracting staff aren't able to be proactive. Another area that has been difficult is in getting budget clarity, which also adversely impacts ability to strategize, plan and implement. Within OEI there are a number of things that seem unnecessarily complex and process-oriented, where it comes to IT deployment, such as the ADC process and security documentation. Another thing that EPA could benefit from tremendously is more training resources, even if they are free and local. Even going to after-hours local technology meetups would be helpful and many EPA staff do those on their	Need to do a better job of showing collaborative data-driven efforts, getting states and other jurisdictions to make more robust use of EPA data, tools and resources as well as having a good set of forums for collaborating and listening to each other's requirements. The Exchange Network Integrated Project Teams (IPTs) begin to try to deal with these but in many ways only scratch the surface, for lack of resources on either side. More pilots and demonstration projects to prove and validate concepts of information exchange, analysis and other uses of the data would be tremendously helpful but resources are lacking for these.	State and local jurisdictions often ask about where they can find better resources for using EPA data, services and tools. They are often scattered around, and lack good developer resources, examples and documentation for partners to easily pick them up and use. These resources are often just put together almost as an afterthought, but we need much more robust support wrapped around them. ODSTA's "Developer Central" and the System of Registries in OIM are some of the better resources that EPA has in that regard but even they are lacking the staff, resources and more robust infrastructure needed.	The biggest area for potential improvement is on the data side. Replace remaining paper-based systems with smart electronic reporting. There are still some processes that even require FAX submissions. These can and should be modernized. Electronic reporting will reduce industry burden, and will speed up reviews, permitting, workflows and approvals, along with making them a lot more efficient and accurate. By "smart electronic reporting" what we should be pursuing is an API-first approach, in which we provide smart web forms for collecting information (which also includes validation of data entered) but under the hood, it also has reusable web services which can be used by state	Better/expanded use of cloud computing and available managed services and Platform-As-A-Service (PAAS) offerings, and streamline how EPA deploys applications (DevOps). Focus on an API-first strategy to make data and services robustly available across the agency. Make better use of sensor technologies and external data sources in concert with our own. Engage in more LEAN events and business process re-engineering to re-evaluate and streamline workflows and processes, and do more automation, whether data refreshing/loading, transformation, QA, et cetera.	There are a lot of common needs across states, tribes, territories and EPA as well as with local government. In many cases it doesn't necessarily make sense and is horribly expensive to re-invent the wheel for every jurisdiction. EPA needs to collaborate closely with state and local government as well as with other federal agencies on data standards and shared services that can let all parties do their work far more efficiently and cheaply.
1121	1120	5/22/2017	1. Software/process inefficiencies in timekeeping system: If employees need to change a leave request after submitting it in PeoplePlus, they can???t take back the request using that system, but instead have to submit a separate request to a manager by email. This is cumbersome and inefficient, and consumes email server and storage resources. The People Plus software should be upgraded to include a built-in request withdrawal and revision system. Also, the People Plus system should be integrated with our Outlook calendars, so that granted absence requests automatically populate the calendar in the right places. As it is, we unnecessarily spend time retyping leave requests into our calendars. Finally, revise People Plus so that it can show more than five accounting codes at once. There's no reason people should keep having to click back and forth between pages, and it adds up to significant lost time. 2. Password updates: Employee time is	1. Strong oversight of delegated/approved state and tribal programs. 2. Assessment of gaps in regulations that allow a race to the bottom effect among states, followed by promulgation of new regulations to fill these gaps. 3. Strong support for EPA enforcement programs. This is necessary to avoid giving a short-term competitive advantage to states that weaken their own programs. 4. Increase emphasis on sustainability in our own operations, and provide relevant information about it to the public and partners. Explore ways to build sustainability requirements into our grant and oversight processes.	1. More affirmative online posting of environmental information. 2. Abbreviate the OMB review process for EPA rulemakings. 3. In rulemaking and other agency actions, ensure that benefits are considered as well as costs. 4. Restore and implement the CPP and WOUS rule. Clean air and water are good service. 5. End excessive political review and oversight of FOIA responses, including consultation about White House equities. Issue a ???fishbowl memorandum??Â clearly mandating transparency. 6. Reinstate consideration of social costs of carbon and other greenhouse gas impacts in NEPA reviews.	1. End political review and oversight of FOIA responses. Mandate transparency. 2. Reduce political-approval bottlenecks for routine Agency actions.	1. FOIAonline needs improvement and integration with EPA systems (e.g. Relativity). 2. Upgrade to the current version of Relativity. 3. Obtain cloud-based storage of text messages sent and received on Agency mobile phones. 4. Automatically post all senior officials??? calendars online for public viewing. 5. Work to further streamline litigation hold system to make releasing outdate holds easier, limit the scope of existing holds to what is necessary, and make notifications and questionnaires more effective and efficient.	Increase enforcement programs in areas where state efforts are lacking.

AMERICAN OVERSIGHT

	I
1120	Containerization, Big Data, DevOps, Continuous Integration, Microservices, and streaming sensor data are far more mature in the private sector than they are at EPA, EPA should continue working toward building these out.

1122	1121	5/22/2017				As much as it would be unfavorable for me and other employess, the amount that EPA matches each employee in their TSP account could be reduced in order to reduce costs.		
1123	1122	5/22/2017	I do CWA enforcement. In our Regional office, there are simply too many documents and processes that are required of a new case, before I can even get an attorney assigned. Theses same documents then have to be redone as we get more information about the case.	Remove this idea that EPA has to always be the lead on enforcement.. In my program (404 CWA Enforcement) there is too much emphasis in taking on cases just to pad the "numbers" for OCE. So we aren't always taking "good cases" or we are trying to take on cases that are best resolved by our other federal (COE), state or local partners.	Let us do more with outreach and compliance assistance (compliance assistance has been deemphasized the last couple of years).		Well we could all use better training just on the tools and technologies that we already have.	Establish more local agreements to provide better alignment (and coordination) between State and Federal partners on enforcement.
1124	1123	5/22/2017						
1125	1124	5/22/2017	The Agency needs to have a better mechanism for addressing poor performance and/or dismissing non-performers from the Agency.					
1126	1125	5/22/2017		Increasing staff levels at EPA will result in achieving better environmental results.	Increasing staff levels at EPA will enable us to provide better customer service. Reducing staff will make it very difficult to provide customer service.			

AMERICAN OVERSIGHT

	I
1122	
1123	In the 404 CWA program, our Region's hold Field Level Agreement meetings w/ our state and federal partners to go over case development, information exchange, and development of better coordination/communication procedures.
1124	Having online systems such as FOIA, that require you to login and change your password even though you haven't needed to use the system for months, is a hugely stupid waste of time and resources.
1125	
1126	Making good use of senior EPA employees. Their institutional knowledge would improve efficiency, and their core beliefs and integrity would increase accountability.

1127	1126	5/22/2017	Correspondence - change agency practice/policy so that staff can submit an electronic copy of a memo or other document needing management approval and can stop wasting money and time preparing those same documents in hard copy that inevitably get changes before they are finalized. As envisioned, the document would be routed electronically, edits made electronically, and only the final version (ready for signature) would be printed out into a "formal signature package." Saves paper and time and reduces our carbon footprint by using less paper.					
1128	1127	5/22/2017	When I cannot easily find the solution to a equipment or EZ Tech problem, I can only call EZ Tech to get support. We need to modernize our EZ tech customer service so that we SHARE SOLUTIONS (e.g. a SharePoint site) in a common space. For example, if there is a problem with your iPhone, people will try to search Google to find how others resolved the issue, you may never have to call someone for help. If EPA could modernize their EZ Tech customer service so that we could share solutions, EPA could save money on their EZ Tech customer support contract and operate more like a modern effective customer service provider.		EPA should do User Research to identify how different groups seek customer service from EPA and pilot programs to engage with those groups better. For instance, the states may be seeking a communication platform which could be hosted in e-Enterprise while the public at large may interface with specific EPA web pages or social media accounts.	Yes, there are untapped opportunities to automate and lean administrative (e.g. financial or HR) work processes. We can leverage technology to develop automated solutions so employees can focus on mission related work instead of being burdened by administrative work.	There are three technologies: cloud hosting, human centered design practices, and cybersecurity. The faster we migrate from on-premise hosting (i.e. NCC servers) to cloud service offerings (AWS), the quicker we can save money on hosting costs. The existing on-premise hosting service at the NCC is not accountable to responding to customers and there are people in processes where there could definitely be automation, which makes for a very cost and time intensive process. To do this migration effectively, EPA employees needed to be properly trained in modern software development practices. Human centered design (HCD) practices is a	
1129	1128	5/22/2017	Community involvement documents (such as a fact sheet or brochure) must fit within a narrow selection of templates. These templates are outdated and make the agency feel archaic. If you want to develop a new style for a community involvement document, it can take many months to get approval. By then, the community involvement need has passed and was not met.		Public involvement and community outreach activities at the project level must be approved by headquarters. This is nonsense. It creates a bureaucratic nightmare and prevents EPA from being able to react efficiently to community needs. Trust employees at the regional level to make the right decisions.			

AMERICAN OVERSIGHT

	I
1127	
1128	There is a great amount of potential for EPA to improve how we work (efficiently, with accountability, and reducing costs) if EPA adopts and matures into a organization that uses human centered design to deliver our work products. Check out the human centered design work at IDEO and Pivotal.

1130	1129	5/22/2017	Yes. Staff spend unnecessary time on document review for FOIA, litigation, and congressional requests because we are not making efficient use of document review tools and because we are not managing records efficiently. The Relativity document review software needs to be upgraded to 9.4 and the analytics tools (de-duplication and e-mail threading) need to be functional so that staff do not have to waste time and resources reviewing multiple copies of documents for litigation purposes, FOIA, and congressional requests. This is a fairly simple issue that needs to be resolved but requires funding and technical support staff to implement correctly. In addition, we need to procure and utilize better record protocols so records are properly organized and categorized as they are created.				Yes. The Relativity document review software needs to be upgraded to 9.4 and the analytics tools (de-duplication and e-mail threading) need to be functional so that staff do not have to waste time and resources reviewing multiple copies of documents for litigation purposes, FOIA, and congressional requests. This is a simple issue that needs to be resolved but requires funding and technical support staff to implement correctly.	
1131	1130	5/22/2017	It would be better to be able to finalize our MaxiFlex schedule electronically, rather than print and sign a paper copy.	Stop threatening to slash EPA's budget and don't cripple the work we are supposed to do. http://blogs.edf.org/markets/2017/04/24/why-the-epa-gives-taxpayers-the-biggest-bang-for-their-hard-earned-buck				
1132	1131	5/22/2017	Make it easier to transfer between agencies. Since becoming employed at EPA I have received an advanced degree better suited to NASA/FAA/DOT/NOAA. I've interviewed several times. But EPA does not have reciprocal agreements in place that would allow me to do a detail in one of those agencies. It's past time for EPA to engage with it's sister agencies and share employee resources.	Support tribal sovereignty in every extent. Don't trust the states with global impacts, federal standards are there for a reason and need more enforcement, not less.	Performance reviews for managers by staff. This would root out problem managers that have destroyed office morale.	Cross agency platforms. Data centers. Ending the use of contractors and utilizing federal employees, which would be cheaper and faster.	Cross train attorneys as inspectors so that they can enforce first instance.	Combine agencies under a greater authority.

AMERICAN OVERSIGHT

1135	1134	5/22/2017					It has always been clear that our HQ office staff has grade inflation. For the same staff level work we do in the regions, the HQ staff are one grade higher. This is indefensible and should be ended.	
1136	1135	5/22/2017					Make EPA's eDiscovery tools more robust by purchasing newer technologies that have become industry standard not only in the private legal sector but also at other federal agencies, as well as investing in long overdue IT infrastructure upgrades (e.g., new servers) to support newer and future technologies.	

AMERICAN OVERSIGHT

	I
1135	Our time keeping software is not up to date. Your actual work schedule should be automatically populated and all the holidays should automatically be included. There is no reason to have to manually enter all this. Secondly we need the most current software for FOIA's - "Relativity". We are using a three year old version of Relativity and it is inefficient to use for responding to FOIA requests. I am working on a FOA for a year so far and part of the problem is the inefficient software.
1136	Upgrading EPA's eDiscovery tools to align with private sector standards and other federal agencies' adoption will improve our efficiency in responding to obligations in litigation, Freedom of Information Act, and miscellaneous administrative obligations. Our current eDiscovery offering requires EPA employees/contractors to spend at least 2 times the amount of time reviewing and preparing documents for litigation or FOIA, delaying or negatively impacting the quality of the final product in a time when litigation and FOIA requests are at an all-time high.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1137	1136	5/22/2017		Over time, I feel that there has been more emphasis on re-development after cleanup. This is a really powerful way to get States, Tribes, local communities and the private sector to buy into our cleanups more broadly. The Agency should continue to increase our efforts to find re-development opportunities and ease concerns about future liability (for non-liable landowners only).	In the Superfund program, I feel that outreach with States, Tribes, locals and the regulated community is very strong. This is evidenced by our continued work with ASTSWMO, tribal consultation policy, and community outreach programs. Where the regulated community is cooperative (and even where they are not), I think the SF program has tried to clearly lay out our basis for pursuing certain cleanup strategies.	I think there could be more efforts made in OEI to reduce (or streamline) the number of proprietary databases across the Agency. While SharePoint could replace many of these existing databases, there is no option currently at EPA to access SharePoint on your mobile device. This is hampering more widescale use of an already available, functional tool.	Similar to my response in Q4, I think SharePoint is an existing tool that we don't use broadly enough in the Agency. If there could be a more concerted effort to build expertise in SharePoint among staff throughout the Agency, I believe we can leverage this technology and reduce costs Agency-wide. Lotus Notes was partially replaced a few years ago but more effort should be made to retiring all components of it.	I think more partnerships and coordination within the Federal interagency at both the management and staff levels would promote greater collaboration in times of need.
1138	1137	5/22/2017	The new administration's lack of efficiency with respect to nominating the appropriate political appointees is preventing EPA from moving forward with the much needed environmental policies that are needed to further prevent pollution of the environment.	Better environmental results cannot be achieved by rolling back environmental legislation. Also, delegating regulation to states does not make environmental regulation more effective. To the contrary it provides a patchwork of environmental legislation that is not uniform or enforceable.	The agency has made great leaps and bounds in providing great customer service in the past 20 years under previous administrations.	We are already operating at a staffing level that is at a 20 year low. The proposed EPA budget cuts by the White House, including the proposed reduction in staff will only cripple our ability to provide a high level of environmental protection for Americans.	You can increase funding for FTE so that EPA can increase staff. This will allow EPA to operate efficiently.	
1139	1138	5/22/2017	Many of our financial systems are antiquated (IRMS) and don't correspond with other financial sytems well (compass). This allows poor reports, inability to track progress down to a lower level. etc.	I live OK. We should do a better job working with the tribes on environmental stewardship, remediation efforts, etc. We have a lab that is world famous for ground water/subsurface remediation (especially heavy metals and chlorinated solvents).. Huge superfund sites such as tar creek located in the Pitcher, OK has never been a part of our research efforts. In the state of OK there are numerous tribes (with deep pockets) that have been very enterprising/productive business entities as well as the tribal government side. We should work more with tribes in OK via cooperative agreements.	We need to be more active with the tribes and states. Most of the states are broke, they need us more than ever. However, many of the budget cuts seem to be given more power back to the states. States would like to have the power and less government control, however, they don't have the money to make things happen.			I think ORD has done a great job in realigning the business side of things (purchasing ,contracts, etc).

AMERICAN OVERSIGHT

	I
1137	
1138	
1139	ORD initiated lines of business (called OARS) . OARS supports all the labs. Instead of each location having their own set of COs, CORs, SACOs, FCOs, extramural expertise, etc. Many of us are scattered out across the US. When one is out of leave, one of the other OARS staff makes sure nothing sits and it keeps moving.

1142	1141	5/22/2017	EPA could most certainly become more effective and efficient if the systems we use were connected to one another and were not so terrible. Words can't describe the FPPS system, which managers use for personnel actions, awards and training paperwork. The system defies description --- it is full of bugs, looks like it was developed in 1987 and, most importantly, takes hours and hours of managers' time as we blunder through it. Also, most of our systems don't talk to each other. I strongly believe that an efficiency expert focusing on technology could probably make reasonable suggestions in no time. Our own IT people just roll out "new" system after system that are designed to stump and torture staff and employees, rather than help them be more efficient.	In my region, we are reinvigorating quarterly meetings with our states. I think that more face-to-face time improves our ability to interact -- even if we have disagreements over certain matters. I wonder if EPA can set up a "suggestion box" type of thing that states, tribes and municipalities could use to make suggestions. Not sure how this would work -- we'd want it to be limited and not widely public. Perhaps we can work through orgs such as ECOS, National Govs Association, or Leagues of Municipalities to gather input.	See above.		PLEASE take a close look to see if we can get a different version of Outlook that will allow us to reliably search for emails. People can no longer reliably search emails older than 90 days or search for items that may result in more than 250 results. This means most FOIA requests involving emails are run through OEI. Ridiculous and completely avoidable in my opinion. Can we please explore our options to see if we can get an upgraded version of Outlook that allows us to be able to search our own emails? Might cost more up front, but would eliminate a staff of people who have to use a work-around to search emails for the entire agency AND would allow those of us who need to refer back to emails to do so (there is no option there -- as OEI will	
1143	1142	5/22/2017	The EPA Acquisition System (EAS) is a very slow, cumbersome system that causes work to be done slowly and inefficiently. I have worked at DoD and their acquisition is much faster and more efficient. Recommend that the EPA look to move to a better system, whether it is the one DoD uses or a different one.				The finance office at RTP manually enters all contracts and purchase orders manually into their finance system. Then when a contractor submits an invoice (even by email) they have to manually enter that into the system. Recommend that finance develop (or use the same as another agency uses) an electronic invoicing system and incorporate a method where an awarded action automatically feeds into the invoice payment system. Manually entering this data in the 21st century is wasteful.	

AMERICAN OVERSIGHT

	I
1142	
1143	The financial system used by DoD for contracts/purchase orders should be incorporated at EPA. The system allows for the actions to be electronically input into the payment system and then the contractors invoice electronically and payments are made. This system is far more efficient than our current system of manual entries.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1144	1143	5/22/2017	We use multiple timekeeping systems, which leads to inefficiencies. Our records system should be modernized and consolidated so that records can be accessed more readily, which would lead to efficiencies for FOIA requests and discovery requests. For instance, an electronic filing system that includes all records for a particular facility (for all statutes) should be developed. Through this system, records that are not confidential could be accessible to the public.	Our States rely on EPA's assistance with implementation of their environmental programs and routinely request assistance. EPA should retain its role in partnering with states where assistance is requested, but also ensure that the state's responsibilities and commitments are being met through its oversight role in order to insure a level playing field across the country. This creates a level of consistency and certainty for the private sector regardless of where it operates.	Addressed in Questions 1 and 2.		We upgraded to new laptops in 2015. When these are placed in "sleep" or "hibernate" mode at the end of the workday, they do not resume the next workday without a hard restart. This is extremely inefficient, as the previous day's work cannot be resumed in a timely manner. For example, some projects require reference to numerous adobe acrobat files, word documents, excel documents, and internet files. With previous computers, these documents could remain open (with the computer securely locked via password and in "sleep" or "hibernate" mode) until the next workday, allowing you to resume work on the project the next day without searching for and reopening all the relevant materials.	
1145	1144	5/22/2017	There are too many administrative requirements for managing grants - especially continuing program grants. These policies need to be streamlined, rather than creating a new protocol or database every time the IG does an audit. All electronic grant files need to be stored in ONE database. We should not have to upload the same documents to multiple databases. All grant files should be electronic, rather than having to also maintain a paper copy - which takes up file room space, and has to managed/maintained by contractors.			To the extent possible, all EPA employees should be working from home full time. With Agency-issued laptops and remote access to the EPA server, most jobs can seamlessly be conducted from home. The Agency should still have a location where employees can have meetings, when necessary, and store documents that cannot be kept at the home location (CBI), but it would be small (like the COOP in Addison, TX). Real estate costs could be reduced dramatically if this recommendation was implemented.	There are too many administrative requirements for managing grants - especially continuing program grants. 1146	1145	5/22/2017	The length of time it takes to get contract paperwork approved prohibits my ability to get my work done, in two important ways. First, to avoid a stop work situation, I need to develop a statement of work and budget estimate 6 months in advance of the start date of an option year. At that point, I have only fairly general information about the work that will need to be done, decreasing the agency's ability to predict costs accurately and decreasing my ability to usefully evaluate the contractor for their adherence to the budget. It also increases the likelihood of needing modifications once the task order is in place, increasing the total administrative overhead to do the same work. In the case where the paperwork doesn't get through in time and contractors are unable to work for us, I am not able to accomplish my work in a timely way. This situation could be remedied by increasing hiring, or by simplifying contracting procedures.				Our IT infrastructure fails to keep up with advances in the market. We have a webconferencing tool, for instance, that fails to provide key capability. In my case, that includes accessing a list of attendees, or poll results, after the webinar has ended. This is just one example. I will say that it has improved markedly in the 7 years I've been at the agency.	
1147	1146	5/22/2017					Make required training for contracts and health and safety more tailored to employee's job responsibilities. Current training is often not relevant to my work (e.g., using DOD contracts training). Make software for tracking time (People Plus), travel (Concur) training (Skillport, FAITAS) easier/faster to use.	
1148	1147	5/22/2017	Hiring process and rules	We do a great job now! Hard to envision how we could do better.	We do a lot now.		Enough modernization! Can't keep up with changes as it is.	We have a different mission and different responsibilities, that's why the work is housed in different agencies

	A	B	C	D	E	F	G	H
1149	1148	5/22/2017	The reorganization of the Montana office has been difficult but not impossible, I value that my supervisor sets clear expectations, allows flexibility when she can, and is committed to being open minded. It has limited some paperwork; I think we have taken a huge loss in relationships with our tribes and state counterparts. Consultations with Tribes never happen anymore and I find that our State counterparts are confused/hesitation to reach out for guidance.	hold tribes accountable by actually deterring non-compliance instead of holding hands and providing empty ultimatums; escalate timely and appropriately. More involvement at a observation level with States.	Having more time and resources to provide, outreach, transparency, technical/compliance assistance. While we get no credit for these items through NPM, PPA, Strategic plans, or anything; they are vital to our success. There is more to work than numbers from an outdated database.	auto-dialer for reminders for water operators, better microphones in conference rooms(they are terrible, we do a lot of VTC and other remote gathers), electronic tracking of documents for concurrence(this consumes my life and is painstaking), better communication and transparency with data.	auto dialer for compliance reminders and electronic tracking of documents	meeting frequently to establish relationship, trust and transparency; have management coordinate between programs and ARAships even more; combine enforcement with the drinking water program(problem solved)
1150	1149	5/22/2017	Many areas of EPA regulatory oversight are now being hung up in HQs review, for instance treatment as a state approvals for tribes and certain enforcement actions. It would be better if HQs had the ability to review and approve these actions quicker.	We need to be able to meet with state partners more, so have better travel budgets. We also need to have sufficient resources to review state and tribal programmatic submittals, such as drinking water primacy packages, SIPs, and CWA submittals including water standards. Right now, we do not have enough personnel to do this.	If need be, we could have a call center to take in calls from the public and provide information where and when available.	Maintaining a robust enforcement presence is essential, especially in support of state and/or tribal programs. Also, there a many cases that the state or locals cannot or will not pursue do to political or other concerns, and we should maintain our ability to pursue these cases. Enforcement personnel also bring money into the federal treasury by obtaining penalties, obtain great environmental results through injunctive relief and SEPs (which are often sought after by defendants/respondents), and help level the playing field.	OEI needs more resources to be able to provide support to the Regions, in particular to processing FOIAs. For instance, we need to get quicker at performing Outlook searches, and downloading documents to Relativity. We also need to enable the ability for OEI to download Lotus Notes emails and documents into Relativity.	We can better coordinate with states and locals, as well as other federal agencies, in regard to regular meetings to identify and discuss potential enforcement targets. We can also host and sponsor more trainings, or send our inspectors to state/local trainings. Continued collaboration with our partners (both state and federal) is vital, but takes a certain amount of resources and personnel to make it happen.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1151	1150	5/22/2017	I work with too many people who seem to feel that their job is to kill projects, obstruct completing tasks, or ignore things they don't like until they go away. That should not be acceptable. If you work for EPA, and haven't produced anything in the last ??? years, then you should probably leave. In my office, every work product has to be reviewed by 15 random staffers, in addition to managers. This is a waste of time -- those 15 people should focus their energy on their own tasks, and leave managing to managers.	Better information transparency. We need to work on developing tools to share the data that we have in accessible, easy to use tools. Right now, you can't easily download a map of where Superfund sites are. If we want to partner with states, tribes, communities, and businesses, we need to be able to explain what we're doing, where, how, and why. Right now, so much information is buried in PDFs (that might be hard to access) that it's embarrassing. More investment in enterprise data management systems and dashboards.	Hold staff accountable for answering inquiries. Half the time, inquiries go to contractors with little or no oversight. Make contact information easily accessible, and encourage staff to develop a customer service mindset. Make it clear that being unhelpful or rude is not acceptable/	Identify duplicative projects across offices, or find complementary projects and share resources. Encourage collaboration. Expect results. I wish we made people do their own jobs at EPA. I work with too many people who are essentially intermediaries for a contractor: they take my request, pass it on to a contractor, wait around until they get the deliverable, and give it to me. Why are we paying that person, when we could just work with the contractor? Or, we could SAVE MONEY, and ask our full time staff to *do their jobs*.	Better IT: hire real developers and IT professionals, or scientists and analysts who are more current in their experience. I came from the IT group at a large chemical company, where we were doing so many cool, innovative things -- and I'm embarrassed by the state of things at EPA. Often, our IT staff don't even know how to program (we have a GS-15 'developer' in my office who has a 30 year old degree in library science). Empower offices to try new things, work together, and innovate. Push hard for agile development and delivering tangible results.	I think better coordination, and proactive cooperation (instead of reactively fixing problems only after they're discovered) would be beneficial.
1152	1151	5/22/2017	What keeps me from being efficient and effective are the new procedures for getting communications approved. Apparently, review is done only at the top level in OPA for all EPA communications. Highly inefficient. Previously, press responses were approved at AA level and then at staff or mid-management level in OPA. Now, the agency totally misses most press deadlines. Perhaps that is on purpose. Review/approval for social media and other communications projects seems to be the same. It's ridiculous and controlling. Not necessary; we're professionals.	Continue to fund partnership agreements with states. We have a productive and cooperative relationship with states through ASTSTWMO. This helps build state capacity and facilitates states/feds working together to solve tough issues. In the President's proposed budget, there would be little or no funds to continue this relationship. How does that fit with the Administration's call to return more responsibility back to the states?	I do not think it will be possible to provide good customer service to local communities or the public under this Administration in regard to environmental protection.	I do not believe the Administration intends to maintain environmental protection for all Americans.	Greater use of technology to support telework. Improve and enhance the use of Skype or similar video conferencing. Improved teleconferencing capabilities and service. We still have managers who are dubious and distrustful of telework, and we still have conference rooms where phones don't work and internet access is poor. It's the 21st century!	I do not think EPA should be realigned/merged with other federal agencies in regard to cleanup programs for federal facilities. While we have shared responsibility, we cannot mix the responsible party role with regulatory oversight and enforcement.
1153	1152	5/22/2017			Eliminate telecommuting or flexi-place.	Eliminate telecommuting or flexi-place.		

AMERICAN OVERSIGHT

	I
1151	
1152	We might consider shared satellite locations as a modification to telework. Currently, the alternate work location is the employee's home. What about a shared location on a local college campus? Employees could use telephones, computer stations with printers, etc. only a few minutes from their home, thus avoiding a long commute and worsening traffic.
1153	Eliminate telecommuting or flexi-place. The Wall Street Journal reported on Friday, May 19, 2017, that more and more companies are abandoning work at home options. Most recently IBM did so. Those that did not want to return to the office were released. This reduced head count.

1154	1153	5/22/2017	I believe that adding all internal and external videos to the Office of Multimedia is a waste of government resources. I believe that internal videos can shown only by EPA can have a more streamlined approval process	I believe that the review process in EPA is transparent and the public and private companies can comment on EPA deliverables in the docket. I actually believe EPA is much more transparent than other forms of government.	I believe that many of the EPA ideas and communication could be better discussed through video. However, the current process of approving videos is over regulated and people do not use videos as a communication tool as a result.	I believe IT innovations as Youtube videos, wiki, and other forms of social media could be used more effectively	I believe that SharePoint and its existing features good be a great knowledge database for transfer of information. I believe that industry also provides models and databases that could be integrated at EPA more efficiently. For example, I believe there is more BIG DATA tools, and web efficiencies using open literature which would eliminate costly regulations. I believe risk assessment offers an intriguing aspect for assessing real vs perceived risks.	I believe databases and models could be aligned and work functions could be better streamlined
1155	1154	5/22/2017		Increased assistance in the form of financial and expertise support from EPA in both HQ and the Regions.	Increased education utilizing various means to address both sophisticated and less advanced stakeholders. Examples may include in person meetings, webinars, conferences, forming partnerships with key associations, open calls and targeted communication.	Continue to work with underserved communities and those that have the ability to use EPA's resources and pass them on to others for increased environmental stewardship.		
1156	1155	5/22/2017		Creating more stakeholder groups that allow the community to feel a better buy-in and connectivity to the work that is done not only on the federal level but the state/local level as well. If we are trying to increase compliance assistance, build a group of community members aligned with the issue. This creates and extra barrier for enforcement of the issues we are working on in that community.	Have all staff receive project management training to learn how to better juggle priorities. This will allow room for better customer service.	Encourage more older staff to do the phased retirement so that the knowledge can be passed on. Merge some sections that are doing similar work.	Encourage the use of more webinars

1157	1156	5/22/2017	Management procedure: Discharge permits are reviewed and commented on by the entire permitting staff. Then the permitting unit chief reviews and comments on them as does the permitting administrative person. After that they still are looked at by two additional levels of management before being signed and issued. This adds about 45 days or so for each review and there are two reviews. One for public notice and one for issuing. So an additional 3 months is added to the permitting process. I would cut off the two upper level management reviews. I think the RAs and their assistants have much more important things to do than review every permit multiple times.	Field offices in the states rather than having everyone concentrated in one, large, regional office. That way we can meet with our partners, face to face, on a frequent basis to discuss and work out any problems affecting the partnership. Also, as state capital field offices are often in lower cost locality pay areas, this would save on payroll costs and travel costs. Facility costs would need to be explored but those lower cost locality pay areas often have lower rent or lease costs also. EPA Region 10, in Seattle did a study that showed a large savings by having state field offices as compared to moving everyone to Seattle.	Be on the ground where they are so you can visit to listen to their problems and see examples. That makes it much easier to come up with solutions.	Could we make the CFRs more readable? My main example is 40 CFR 122.42(e)(5) concerning nutrient management plans. I had an environmental engineer call for help because they could not figure out what a nutrient management plan needed in it or how to write it. That regulation completely confused them. There has got to be easier language that is still legally defensible.	No ideas here.	No ideas here.
1158	1157	5/22/2017	I think the current administration has a lot of nerve asking these questions so as to help you reduce EPA.	We already do this.	We already do this.	I think asking EPA employees to identify areas where cuts can be made by an already cut-happy administration is outrageous.	See answer to question 4 above.	
1159	1158	5/22/2017	Takes a very long time (weeks) to get any changes made with OPM	Integrated systems would go a long way. Each entity has their own database and filing systems. It would greatly reduce processing times for cases to have a unified database.		More stiff penalties for repeat/serious violators.	integrated databases with states, local, and tribal governments	
1160	1159	5/22/2017	Using three different systems to log time (people plus, webforms for telework, and hard copy forms for travel comp time).				Our technology and processes for responding to FOIA requests are dismal. We need additional technical resources, such as access to Relativity (with full functionality) to improve our response and review time. Further, FOIA Online is not indexed and easily searched.

	1160	5/22/2017				Lifting the hiring freeze would help. It is my job to increase efficiencies in my subject matter area at EPA, and it is difficult to do that when understaffed.		Maintain and increase the consistency of environmental protection nation-wide. If a family takes a road trip through the U.S. from state to state, they should be secure in knowing that the air quality, water quality, and toxicity of products/pesticides are consistent. "Protecting Human Health and the Environment" is not an area of government in which states and other federal agencies should be allowed to go weaker than EPA's standards.
1161								
	1161	5/22/2017	Cut out all unneccessary paperwork and processes for procurement and acquisition. The FAR and EPAAR have created extra work that costs the government more money and takes three times as long to procure an item or service. In addition, the EPA has chosen not to hire a robust workforce for OAM, resulting in extremely poor service and results. Allow managers to approve purchases and hold people accountable who willfully and neglectfully misuse taxpayer funds. Get rid of the useless policies and procedures which ensures the government will pay more and not get what they need when they need it.				Keep it simple. Don't focus on new technologies to become more efficient or effective, Focus on not making poor decisions, policies, procedures that only add steps to the work and causes us to move slower and produce less. Most times in government, having capable leaders that will hold people accountable is the right solution because then you get a motivated and empowered workforce. As long as you keep looking for a new thing or technology, you ignore the most important factor in having a great organization and that is a good leader who actually knows what they are doing and can correct problems.

1163	1162	5/22/2017	I would say that contracting procedures have often prevented efficient accomplishment of goals in the past. In some cases, performance time has been inconsistent. Also, interpretation of rules has been inconsistent. Some of this may be based on externalities, such as fear of investigation, and some on management effectiveness (or lack thereof). From what I have gathered, personnel processes can also be variable.	More flexibility is a good thing. Sometimes we need to step back from what the rules say and try to observe what actually accomplishes environmental quality goals most efficiently or cost-effectively. We also get lost in a power game among all the players, and it causes more friction over time. Understand that getting a site cleaned or keeping it clean is more important than dotting every "I" and crossing every "T." We may need to revisit old regulations and reform them, or even ask for changes in the laws to keep up with our environmental progress. Recognize property rights as another path to achieving and maintaining environmental quality.	First of all, recognize that they are customers who need immediate feedback, as the public pays our salary. Personally, I respond to all inquiries within one business day or find a way to have the inquiry answered if I am not available. Some EPA employees receive a large number of inquiries because our names and numbers are published on a public web site, whereas other employees do not experience the same responsibilities. However, all employees should be sensitive to the need for our internal and external customers to receive fast and friendly service. We need to have good access to our information at our fingertips and try to prevent "loss" of data we have collected over the years as software/hardware systems become obsolete. We could use our own "FAQ page" to help staff find answers quickly to the most frequent types of inquiries we receive from the public.	Have more reliable systems that do not crash. Better integration of systems that do not require transcribing of information (and therefore greater possibility of error). More frequent modernization of systems to achieve these goals.	Lots, no doubt!	Shared research results. Understanding that other agencies are also regulated by us and can be involved earlier in decision making.
1164	1163	5/22/2017	We are required to put in a training form for zero cost classes - seems silly. We are now also required per OARM to put zero dollar PR's for simple changes. i.e. adding someone to the contract as an alternate COR. There should also be a concerted effort from the office of the administrator to update all conference rooms. The conference room space is terrible. Hard to hear, not always TV's, and when the specific media office does update, they restrict other offices from using the space. It is key to have this be a top down investment that is open to all. Start with larger offices and then move into the smaller ones.	I would say that there should be larger more coordinated grants when working with the states and tribes. Requiring EPA to coordinate with other media offices seems key. We have tried to coordinate with other offices in the past, but there isn't much incentive to sharing or coordinating grant monies when a lot of the money is tied to a specific office budget. Maybe pool money as an incentive from the office of the administrator.	In the pollution prevention program, we work very closely with our grantees to encourage sharing of best practices between and among the grantees and EPA and the other non-profits. In addition, we are well situated to encourage pollution prevention activities in advance of the new TSCA rules that will be coming out. Obviously, regulating a specific industry is the easiest way to reduce specific chemicals, but it takes a long concerted effort. Working within the voluntary pollution prevention programs or even through simpler reporting requirements (TRI), there is a reduced burden on industry and a reduction in hazardous waste. Most of the time, businesses also reap the benefits because fixed costs are reduced as well through less permitting, cheaper materials and reduced disposal cost.	We should be looking at ways to share data between countries. Many businesses are global - if we could share risk and hazard data with the EU and vice versa, it would reduce the burden for business and for the environmental agencies worldwide.	EPA does a lot to ensure that our own bottom is reduced, but we still are not using LED lighting. This is a simple fix now that we can pop the new LED bulbs into existing fixtures. If we are working on this, there has been no word. In addition, we need to consolidate Potomac Yards into HQ. It would make it easier to work with that staff, but also use less dollars towards leased space. In addition, instead of closing a regional office as a cost cutting measure - why not look to other federal space to see if we could move into their buildings.	

AMERICAN OVERSIGHT

	I
1163	National Science Foundation has a great grant management and review system, from what I have heard. States are using more mobile technology to cut reporting times for inspections. Better understanding of project goals happens in a lot of the private sector. For EPA, we can use this knowledge not only to understand steps and deadlines better, but also why we may not need to perform certain tasks.
1164	Move on from lotus notes, EAS and people plus. These systems are antiquated and take too much time and money to update, and train staff on.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1165	1164	5/22/2017	The trainings to become a COR are terrible and extremely time consuming. I needed to take 54 hours of confusing online training that delayed my other projects and taught very little real-life skills.	We need to hold polluters accountable for the damage that cause to our communities. Taxpayers cover far to many clean up costs.	We should be present in more public meetings in communities- and not just the regional staff.	We spend so much money contracting out services to make graphics and data visualizations when plenty of free software exists. Unfortunately, due to EPA's licensing requirements, EPA cannot take advantage of these free tools-- even in cases where other federal agencies managed to procure agreements for them! Its a ridiculous waste of money. EPA staffers could make better quality products at no additional cost instead of going back and forth with contractors.	Yes. Gaining access to free online tools (like Canva and Piktochart) for developing graphics should be a priority for the communications workers at this agency. We could save tons of money that is currently going to contractors.	
1166	1165	5/22/2017	The Agency's contracts system is seriously broken (slow, often unresponsive, creating delays). This should be a top priority to fix.	I used to work at a state agency. They are in even worse budget shape than the federal govt. We should almost always partner with them, but if we simply put more requirements on them without any serious added resources, they will not be able to meet the new requirements.	Keep the federal programs we run that provide technical assistance to states, locals, tribes... It is a perfect federal role to develop and provide resources to help them run their programs in the most efficient way possible.	Support voluntary partnership programs that help reduce costs for state et al to meet environmental requirements, but in a way that is intrinsically consistent with markets and the private sector -- but only if the partnership programs are effective. Double-down on those that are, and scrap those that are not. I think there is vast untapped potential in EPA data systems. Bring in a real IT/API expert to figure out how to most effectively make all these reams of data (e.g., TRI) more accessible and usable by citizens. They can then hold us accountable to what they will identify as the most critical local problems they face, rather than just Washington deciding what's	We should align environmental programs to enable high jobs producing sectors of the future (electric vehicles, energy storage, renewables) which are also essential competitive areas for the U.S. to maintain superiority in globally.	See above. More partnership programs with states, locals, and industry. Also, do a real risk analysis of environmental exposures and risks. Are things like indoor air (unregulated) of as great concern as outdoor air (highly regulated)? If so, let's put resources there.

AMERICAN OVERSIGHT

	I
1165	Offices should better utilize the tools provide to aid telework. If everyone was able to use Adobe connect and Skype better, we could save time communicating with people who are out of office. The number of people who do not know how to utilize these tools is sobering.
1166	How about the ability to fire people, at minimum, who engage in seriously inappropriate activity (selling things onsite; looking at porn), and more broadly are raging underperformers (let alone just poor performers)? Good luck with this, as the unions are required to defend all, but it would boost morale of everyone else to have these clunkers removed from the agency.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1167	1166	5/22/2017				EPA as a whole needs to do a better job of workforce planning. In other words, you need to have the right people in the right positions in the right locations. In my time with the agency, since 1998, I have seen reorganizations, buyouts, and hiring and it never fails to amaze me that people never actually look at the work load, the current need, and the projected need in performing these things. It always seems to be about empire building or realigning to justify the number of FTE's. EPA as a whole also needs to flatten the organization and I don't mean by redefining positions to make the appear to be below the line rather than above the line. I would never like to see people lose jobs over these types of		
1168	1167	5/22/2017				stop cleaning the bathrooms, and dusting three times a day. Stop watering the grass, stop growing grass - let it go wild.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1169	1168	5/22/2017	Administrations that focus myopically on deregulation as if it is a mythical savior. Read the comments from the Makah Tribe in their comments to EO 13777. Regulations are in place to ensure a level playing field for all businesses, protect human health and the environment, and promote transparency and fairness. The rhetoric coming from people like Administrator Pruitt and his chief of staff, lumping all regulations in as one "bad" belie either ignorance, or, most likely, antipathy towards the work we do.		We aren't in the customer service industry. Better outcomes come from promoting strong, ethical values from the top down. Currently, the Administrator and his staff's communications would lead one to believe that our "customers" are small businesses and industries and that the priority is ensuring their lives are easier. We are tasked by Congress with enforcing the environmental laws on the books. Ensuring that those laws are fully enforced is our "service." Our customers are the people of the United States of America, not one segment of business or industry. All people. Those customers deserve a robustly funded, respected, values-driven EPA that is not forced to be the punching bag for every Republican or industry-friendly politician across America. It may play well with a segment of voters, but those same voters will be upset when EPA lacks the personnel or resources to protect them from the	Reduce the reliance on contractors for every thing we do. While it is true that sometimes a private contractor can do something more efficiently, the obsession with outsourcing government work can sometimes lead to higher costs and worse work. And it is another attack on the federal workforce. We've already been demoralized enough through incessant attacks from politicians like Administrator Pruitt.	Computers. Improve our computing power. Stop boondoggle contracts with companies like Microsoft. Use the power of search engines like Google to improve our storage and search capabilities. Our website is a joke, and the search functions are worse. My computer looks like a replica of the one I used as a freshman in college in the 90s. I know this administration is antagonistic towards spending money on agencies, but increasing our IT and computer software/hardware budget would be helpful in making us more efficient and effective.	I don't know what this means, but if it means what I think you want it to mean - ie handing off work to other agencies or states - your fixation is misplaced. We are already operating at staff and budget levels a fraction of what we ought to be doing. Save money elsewhere - How about the 125 billion the Pentagon is wasting on contractors? Show some moral and intellectual honesty. This entire survey is a red herring.
1170	1169	5/22/2017	The treat of budget cuts, staff lay-offs, elimination of environmentally important projects, and statements (such as elimination of important environmental regulation that ensure healthy ecosystems and human health) from the EPA political leaders and the President has a devastating impact on staff moral and for sure impact staff efficiency. This can be improved by respecting and make the EPA staff feeling appreciated and important by their words and actions!	I believe there are already measurements in place to achieve this.	I believe it is already good, but of course it can be improved with better communication.	Nothing come to mind	Improve audio-visual equipment and operators - this will reduce travel cost.	Set-up meetings (even standing meetings) with different agencies at the higher and lower levels - especially in cities where the agencies are relatively closely located.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1171	1170	5/22/2017	Everything has been pushed down to the employee, thus you'll have inefficient time being spent on preparing training forms, travel, or other administrative activities and when there is an issue or problem whether with the system or the user, the user spends typically an inordinate amount of time trying to fix the problem. Thus, you may have high salaried people spending way too much time on non mission critical work, it is inefficient. I'd suggest designated local, administrative centers to handle these types of important yet non technical/professional matter.	Every state, tribe and local community is different in its approach - whether because of resources or policy choices; thus, Regions and their Regional Administrator should be sensitive to the needs of those groups and recognize their differences. However, transboundary pollution whether air, water, waste requires a benchmark or baseline in the protections afforded all Americans whether living in a mid western state or an eastern state or a western state. Delegated environmental programs to the states address this problem in large measure, EPA should be at the forefront of facilitating outcomes which bring the results that the individual state or states desire without jeopardizing the baseline of human health and environmental protections provided by Congress.	Rountables in each Region where these groups can bring their priority issues, with some limitation on how many issues at each roundtable.	Use of technology to manage environmental protections, where the electronic information is submitted and their is less need for actual boots on the ground.	See the enforcement's idea of next generation, get the program offices on board with writing permits that include these innovative technologies.	Working with our partners on their priorities, which should direct how EPA approaches its mission.
1172	1171	5/22/2017	In OPPTs, Risk Assessment Division, a more effective management system for the existing chemicals assessment process is needed. One suggestion would be to truly delegate technical decision-making (not just administrative tasks) to branch managers/management leads assigned to existing chemical teams. They should be trusted members of the management team that are integrated into the workflow. Instead, all decisions are funneled and delayed at the Division Director level. If the Division Director wants to maintain complete oversight of all technical decisions, then more frequent engagement is needed to make interim decisions (on a much more frequent basis - at least weekly) to eliminate speculation/discord amongst teams and to move the technical process forward.	I think our division is making a concerted effort in partnering with the private sector in implementing the new Lautenberg Act and where possible (a significant portion of our work involves Confidential Business Information).	We are in the process of doing exactly that in implementing the Lautenberg Act	Not in my Division.	Yes, I believe our Division is in the process of creating a new Electronic Management System to manage the New Chemicals work flow. For existing chemicals, we could possibly enact a management system such as Confluence.	Yes, there could be joint projects with OSHA or the Consumer Products Safety Commission regarding chemical usage and safety.

AMERICAN OVERSIGHT

	I
1171	Private sector use of telework with solid accountability for production of services. Some corporations don't even have offices besides satellite offices, could save money from GSA ownership.
1172	We could try using Confluence as a task management system. However, the government is not a private business nor do processes such as those found in the private sector necessarily apply to government processes - particularly the legal mandates, legal procedures (eg., proposed documents/rule publication, public comment, etc) that dictate and often constrain EPA's processes.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1173	1172	5/22/2017					Better IT for alternate worksite. Better teleconference lines- the line has been broken in our conference room for some time.	
1174	1173	5/22/2017	The systems that we use, FPPS, WTTS, and Monster are all very challenging to use, and I find it extremely difficult to be proficient in my job when I am forced to wait on a system to talk to another system, or when there are connectivity issues-which happens frequently. FPPS is also very difficult to navigate to look up an employee's record.	No comment.	No comment.		We need a better, more efficient HR processing system.	
1175	1174	5/22/2017					The use of electronic signatures and routing for all forms would be more efficient. There are still several forms and routing reviews which are handled in paper only. This slows the process down and can lead to documents being lost in route. Several of our practices are already electronic with electronic signatures allowed as authorization. All of them should be done this way for efficiency, speed and tracking purposes.	

AMERICAN OVERSIGHT

1176	Please see Q. 5 above.
1177	A best practice in the federal civil rights community is the use of full time counselors focused on providing opportunities to resolve disputes. Our use of part-time counselors lends to marginal attempts at resolution; incorrect or incomplete information provided to customers and an image that the program is not important enough to provide professional, full time, civil rights practioneers. Providing the slots and commensurate funding for a professional cadre is another means of showing leaderships commitment to a model EEO program.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1178	1177	5/22/2017	The Action Development Process can be redundant and overly burdensome especially if any AA-ship drags their feet on Option Selection or table their concerns to maximize their lavage at FAR. Hardening the requirements for prompt identification of issues and requiring outcomes/solutions from any raised objections (i.e., can propose hypothetical or ideological concerns) from ADP meetings might help. In addition, creating timely review parameters (i.e., how long a supervisor should take to review a certain product) for first and second line supervisors would dramatically improve agency efficiency.	As part of EPA employee and supervisors review, have a semi-annual (2-3 years) survey of their stakeholders that can be used to evaluate effectiveness.	Provide the public with more contact information of EPA officials throughout the ranks. Directories should be expansive and provide general public with multiple POCs for various issues. It can be difficult for stakeholders and the general public to make initial contact with EPA. It might also be valuable to create an online form that allows the public and stakeholders to submit information to EPA about their costumer experience. This could be used to help craft awards or help identify program offices that have deficiencies.	Crowd source major projects to EPA employees. Skills Marketplace has really opened up opportunities but EPA should allow employees the ability to quickly and efficiently take on projects outside of their AA-ship. This could be achieve by requiring all EPA staff (with limited exceptions) to have 10% of their time as flexible/unassigned. Employees could sign up for tasks or take on non-standard work items and decide if they want to be evaluated for that time (which would only benefit them) or leave those projects they undertake as non-evaluated tasks. This is similar to Skills Marketplace but would not require management approval to undertake task and would allow EPA to better respond	Better use and culture towards using cloud computing and virtual meeting places. Investments in virtual meeting technologies will enable better virtual workplace experiences and better accountability of remotely working staff.	
1179	1178	5/22/2017					Central table for all the currently approved CSF???s for every company: Currently, CSFs are scattered, some in the jackets, some in the e-jackets, and some somewhere in between. Centralizing a repository for all currently approved CSFs, makes it more efficient to locate the most recent CFSs for the regulatory and scientific review. There are also instances where supersede CSFs are not marked as so. During the process of organizing a central CSF table, superseded CSFs will be identified and removed from further consideration by reviewers.

1180	1179	5/22/2017				Consider flattening the organization again. In the current organization there are so many levels of management - which costs more and decreases efficiency.	The agency needs to reduce its dependence on contractors for providing IT services. There are so many stove-piped contracts in place.. The contractors do not work together; there is limited to zero communication between contractors, there is redundancy in services, and there is limited (if any) federal oversight by anyone that understands the technology. Any attempts to adopt new technology results in throwing more money at a contract. It does not work. It is not efficient. It has become very expensive and we seem to keep going backward from a technology standpoint. Another missed opportunity at EPA is the services provided through the	
1181	1180	5/22/2017	The EPA staff is currently required to spend too much time taking and passing mandatory annual training courses. The content and priority of these training courses should be reviewed with the objective of transferring all or most of them to bi-annual training sessions.	Partnering with outside organizations which rely on and need Federal funding costs money. EPA can't reduce its grant commitments to the States and Tribes at a time when most States are struggling to keep up the environmental funding available from their own legislatures. And funding to localities for achieving environmental remediation results through Brownfield programs needs to be increased. These programs are an economic engine for local communities that leverage many more new dollars than the cost of the original grants. In other words, we are succeeding at "spending money to make money." EPA is the best agency capable of managing infrastructure funds in the areas of drinking water purification and waste water management. Consequently, we need to be fighting to increase the Agency's budget for the	I think EPA is currently doing a good job at customer service - much better than most government agencies. Our biggest continuous need is keep listening to outside groups to hear and try to accommodate their ideas for communicating more effectively - with face-to-face meetings, conference calls, and social media outlets.		At the EPA upper management level, there are probably still too many face-to-face meetings that could be accomplished with video-audio participation technology (e.g., Skype, Adobe Connect). This would free up manager time and reduce travel costs. The travel budget would be better used for communicating face-to-face with external parties like State managers, key NGO groups, and even local enviro organizations that would benefit from face-to-face meetings with EPA to demonstrate that EPA cares about their concerns.

1182	1181	5/22/2017	Simplify,streamline and/or reduce the number of approvals that are needed for things such as purchasing and travel. Simplify and streamline the requirements for managing contracts. Quite often the overhead required to administer and document contract activities can take more time than performing the actual tasks.	Share databases. Harmonize and synchronize standard operating procedures and reporting templates.		Reward and encourage highly productive employees. Hold unproductive employees accountable for increasing their productivity or offer them demotion if they choose not meet the requirements of their job description.	Develop green chemistry methods for analytical work across all agency programs. Contract labs as well as agency labs are required to use many analytical methods that were developed years or decades ago and require large amounts of toxic or hazardous chemicals.	Identify and eliminate duplication of efforts.
1183	1182	5/22/2017	Finding information on our agency intranet is very difficult and wastes the administrative time of our employees. The amount of time staff members invest trying to find information internal to the agency is known as a ???clutter tax.??Â The more time staff spend trying to filter through a clutter of outdated and unmanaged content, the more it costs the agency and the employees in wasted time. More senior leader support is needed for the Office of Internal Communications and Office of Environmental Information proposal to clean up the agency intranet like EPA recently did with the public website. Such an effort would be very valuable in making employees more efficient.	n/a	n/a	Roughly 80% of companies now run on open source software to manage their intranets to save money. However, EPA???s current methods for managing its intranet is extremely costly and not conducive to advancing the EPAs work or saving the organizing money. The agency allows every region and program office to manage multiple servers and intranet accounts called TSSMS accounts. These multiple accounts and servers cost the agency thousands of dollars each year. By adopting Drupal as the intranet standard for the entire agency (like the EPA did for the public website EPA.gov), the EPA could save up to $1 million while also improving the management of intranet content to make employees more efficient.	Moving forward with the Office of Internal Communications and Office of Environmental Information proposal to adopt a standard intranet strategy and platform across the agency would greatly increase our efficiency. It would improve information sharing and also reduce costs. A platform like Drupal, best known as the open-source platform behind public websites like Whitehouse.gov and our own EPA.gov, is also a good option to manage our intranet since we already invest in it. However, EPA currently allows regions and program offices to use multiple different platforms to manage their internal websites. There is no standard, so the agency is spending a lot of money at all	n/a

AMERICAN OVERSIGHT

	I
1182	Encourage collaboration to reduce duplication of efforts.
1183	ORD has reduced the amount of contract dollars it spends annually on public website support as a result of its Drupal migration. ORD also reduced costs by eliminating unnecessary servers and TSSMS accounts after transitioning its intranet to Drupal (like the agency did for the public website). However, EPA has not adopted this strategy agency-wide. The Office of Internal Communications and Office of Environmental Information could use ORD as a case study to adopt Drupal as a standard intranet tool to manage all agency internal websites. We already use this platform for the public website (EPA.gov), so it makes good business sense to eliminate the cost of

1184	1183	5/22/2017	There have been hundreds of pages of guidance issued over the past decade or so - if not thousands of pages, on environmental justice (over 200 pages!), delegations of authority, nationally significant issues, Next Generation, model settlement justification memorandum, model litigation report memorandum. And - unbelievably, there is no index to all the guidance documents. You have to ask around and cross your fingers hoping you found everything relevant. Are all the guidance documents really needed? Why the heck isn't there an index to them?	It would be nice if there was a way to share penalties with our state partners in an administrative enforcement action. Our state partners provide terrific assistance in these matters, in my experience. But, when a state joins our enforcement action, we must pursue a civil judicial path so we can share penalties with the state.	Better technology and technology support will improve customer service to all. We also need an electronic system to update our state implementation plans. It would help get the state submissions approved more efficiently since we would already have a compilation of the law the state was changing because right now, we don't always have this. Many regions are decades behind in compiling these state implementation plans (under the Clean Air Act) even though the Clean Air Act requires EPA to compile these plans every 3 years. The law that EPA is required to enforce is not compiled - not online or in a book.	Too many of our regulations are very poorly written and even internally, we can't understand how to comply. Drafting rules that are easier to understand but that don't get the absolute maximum pollutant reduction from each source - might still end up with an overall environmental benefit if there are more people complying. We would probably get the same environmental benefit if we had rules that were very easy to understand, and very easy to enforce because more people would comply and it would be easier to spot noncompliance. Instead, we draft super specific rules to squeeze out every last pollutant reduction from all these different categories of sources - too many of our	General Services Administration is very challenging to to deal with. For example, the GSA badging office is open Mondays and Wednesdays until noon in region 4. That's it, no other times. And when GSA codes your badge, GSA doesn't tell you it takes a week to 10 days to start working, so you try to get into the building and your badge doesn't work. Why wouldn't GSA explain this to you when you are at the badging office? GSA's communications are poor. Often, you cannot tell what information is being shared. And there seems to be little accountability. At any given day, at least one of the garage doors on the parking garage are not working. Once, I had to leave early, and the guards could not get	In my experience, our state partners are very happy to have the EPA utilizing federal resources to solve problems in their states. States send us the matters that they lack resources to deal with.
1185	1184	5/22/2017				Reduce layers of middle management. Divisions and Branches do not need deputies. Consider eliminating Divisions entirely and consolidate into Offices.		
1186	1185	5/22/2017	Contracts Management is extremely slow and sometimes non responsive. The milestones they set up to process PRs are often not achieved.	Communications	Communications and the periodization of needs coupled with risk factors.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1187	1186	5/22/2017	The Federal Register has archaic rules that were likely developed prior to widespread use of personal computers. The Federal Register Document Drafting Handbook is 228 pages long. Many of the requirements are unnecessary and require additional resources for (1) FR staff to develop the rules and (2) agency staff time to assure compliance with the requirements. I would conduct a review from outside the FR office to make recommendations on ways to streamline the FR office requirements to reduce staffing and printing costs across the federal government. For example, when a rule is amended the agency is required to use amendatory text. This approach is not only difficult for the public to understand, but it is also prone to mistakes and an unnecessary use of agency resources. It is common practice to put a track changes (i.e., redline strikeout) in the docket so the public can more easily understand the amendments. This document could also	Develop a policy of limiting penalties for the regulated community that self reports violations. This would recognize the environmental benefit of coming into compliance instead of incentivizing covering up issues. Partner with states, tribes, local communities, and the private sector in recognizing the long term environmental and cost savings benefit of innovative/emerging technologies. Currently, emission standards are often based on the technology that achieves the lowest emission rate for the specific pollutant of concern with secondary considerations of costs, other environmental impacts, and technology development. There is limited incentive for the regulated community to participate in technology demonstrations. If the innovative technology is not	Allow technical staff to give tentative direction on their understanding on how to comply with rules while OECA conducts a more formal review. It can take months or longer to receive responses to formal interpretations requests. Therefore, technical staff often receive questions on rule requirements they worked on from both the regulated community and regulators that are trying in good faith the comply with the requirements. However, OECA staff discourage technical staff from giving any guidance because it decreases the ability of the EPA from accessing potential future penalties. The goal should be assisting in compliance and not maximizing penalties. If a technical staff understanding is later found to be incorrect, then the source should be allowed to come into compliance with limited penalties.	Have periodic independent desk audits of senior staff (GS14 and higher) to assure that (1) the expertise is aligned with current agency needs and (2) the staff are doing work that is commensurate with the higher GS level. If staff are determined not to be meeting the requirements to justify the GS level, they should be given the opportunity to transfer to any open senior staff positions they qualify for in the federal government or accept a lower GS level. It is not uncommon for staff to be promoted but at some later point are no longer performing at the expected level. Currently, these staff are either left in the position or moved to another positions while maintaining their GS level. This is (1) an	Use the electronic docket more effectively and publish less material in the Federal Register. The Federal Register should provide adequate material for the public to understand what the agency is doing. Regulatory text, compliance with executive orders, and other rationale/discussions should be included in the electronic docket. This would reduce printing costs while still providing adequate public notice of agency actions. Expand the use of the Talent Hub. This is a great program to efficiently use staff resources and develop staff talent. However, there is a perception from managers that allowing staff to participate will reduce future resource allocations. It	Minimize overlap in agency functions. For example, EPA???s Energy Star and WaterSense programs overlap with programs at the Department of Energy. The DOE is tasked with establishing minimum energy efficiency and water use standards. It would be more efficient for the same staff and supervisor at the DOE to develop Energy Star and WaterSense guidelines at the same time and minimum standards are developed. In addition to the cost savings, this would assure consistency. Labeling of products without minimum standards could either stay at the EPA or be moved to the
1188	1187	5/22/2017	Getting training approved through the Training Offices is sometimes laborious, even when the supervisor has already approved and funded the training. This is particularly true for group training events. It seems if the supervisor authorizes the training and fund it, there should be no need for another person (Training Office) to approve. If we have a system for procuring items through the purchase card, why is it necessary to have a "Purchase Card log". All of the information provided on the log is the same in the system on the PR. This seems a bit redundant. If the current system (Web Forms or EAS) does not include all information needed, let's fix the system to include all necessary information or use another system which meets the needs for all information on our purchases. Also, there is too much "legal overhead" in the processing of both informal and formal complaints in the Office of Civil Rights. It takes way too long to get Final	N/A	N/A	There continues to be a lack of support for managers in the area of discipline for problem employees -- particularly with conduct issues. Employees continue to be insubordinate with seemingly no accountability, which results in less productivity due to poor morale of other employees witnessing and experiencing disruptions in the workplace by employees with poor attitudes, attendance, etc. Employees who conscientiously do their jobs have increased workloads due to problem employees not being held accountability for work they are assigned, creating a poor work environment/poor morale and decreasing productivity. Hold managers accountable for their actions in holding employees accountable, and	There are always new technologies out there that would be helpful in streamlining work and processes. However, many times, the folks who are on the front lines are not consulted when deciding to move to the new technologies/systems; therefore, resulting in systems that are inefficient and laborious. Adopt new technologies and processes, but do so while working with those who actually use the processes and technologies to ensure proper implementation, training, etc.	Do more networking with other Agencies on like services provided to showcase best practices that could be helpful/more efficient for all.

1189	1188	5/22/2017	I would continue to support efforts to consolidate admin systems. Anything that reduces the number of systems that we have to work with helps. I would also support continuing to move systems out of Lotus Notes and into Microsoft SharePoint or equivalent.	I think it would be good to develop a strategy for each office to reach out to stakeholders. I tend to think that having periodic stakeholder forums would be a good idea, but I would like for it to be a part of a larger outreach strategy.	We need to make sure we are responsive to the public. I've been so frustrated lately with responses to the public getting held up. We need to be more efficient and provide timely responses. Also, FR notices, we need to keep them moving...	Not really. We do so much with the little bit that we have. If anything, we need to build stronger partnerships with stakeholders, so that they can effectively help us meet our goals. For instance, working with volunteer monitoring groups to collect good quality data. Then again, that usually necessitates some funding for capacity building. The cycle continues...	Not that I can think of.	With other federal agencies, it would be good to have a liaison to key federal partners at each office. And make sure everyone knows who that is. So that, if I want to work on an issue with Forest Service, I know who to go to.
1190	1189	5/22/2017	I believe that there is a big gap in between management and employees. Managers are not fully trained and are not accountable. Upper management failed to take action if manager doesn't comply with the rules. Upper management supports supervisors and asking employees to get help from the Unions instead of resolving issues. It directly affects job duties and harassed employees. Management made internal ADR rules but doesn't follow if complain about supervisors. These rules can only be applied on employees, not on management which is affecting our job. Management should me more accountable.	Partnering with states, tribes, local communities, or the private sector is one of the best approach to receive better results e.g. involve states, tribes, local communities to prevent duplicate work and to better understand the needs.	-	-	- Reduce management chain and make management more accountable, - Improve employees management relations - Reduce approval process chain and improve approval services.	-

1191	1190	5/22/2017	Not applicable.	One day, hopefully in the near future, efforts taken by regulators to protect human health and the environment, will secure public/private support and visibility to help more effectively demonstrate the return on investment that constituent derive from administrative/technical refinements that foster the reuse/revitalization of our universe of sites. The information collection burden process needs to be revisited and incentives developed to help foster public/private collaboration to help better communicate and convey the return on investment derived from ongoing efforts. The current process has room for improvement.	We live in an information management age yet very little value is placed on the importance of maintaining online details. When budgets are cut, communications and outreach efforts are curtailed and services relied upon to provide better "customer service" are correspondingly curtailed. I'm NOT SURE if the current evaluation process clearly captures the value & importance of maintaining accurate information on websites as a catalyst, for transparency!	Not sure!	TBD	Provide structured opportunities for staff to contribute ideas and recommendations to enhance collaborations like the Partnership In Sustainable Communities (OSC) and enhance collaboration with their peers in other federal agencies working on mutually aligned projects (e.g., some of these opportunities should be listed by corresponding program priorities. The current effort requires review of budgets and budgets which could/should be more easily aligned in this day and age of information management.
1192	1191	5/22/2017	Many of our systems and databases continue to be clunky and disjointed: Webforms and people plus are not connected, webforms has many forms that cannot be filled and submitted, Lotus Notes still needs to be used for international travel approval, info cannot always be found easily on the Intranet, and when you find it, it doesn't always have helpful links and you still need to search for what you need (for example, trying to change health benefits for a QLE- info is not clear). Other examples include obtaining certain IT improvements, such as a converter cord to hook up to a display screen, or a new hands free headset-- in my experience, admin staff point to EZTech and EZTech points to Admin staff, and it took months and lots of wasted work time for me to try to get a $10 piece of equipment.	Actually implement the regs we have promulgated and which have gone through multiple rounds of public comment and legal and policy analysis.	Keep scientifically-based information on our website rather than replace it with climate change denial. American citizens rely on EPA for unbiased, scientifically-backed information and data. We lose credibility when we remove this from our website.	Consolidate space and save $ by moving Potomac Yard into the Federal Triangle space- would save on lease and shuttle bus.	Managers need to be supportive of SharePoint and OneDrive. Many staff have taken the initiative to not only use these systems, but also train fellow staff and managers on how to use them, and yet managers still seem resistant to using them and often are THE roadblock. These systems, when used properly, have greatly increased efficiencies and improved workflow, and we should not have our own management be the ones standing in the way of workplace improvements! Also, move all our systems to use Chrome, not IE.

	1192	5/22/2017	The process of completing timesheets is not linked and synchronized with requests for leave, although they are the same system creating inaccuracies in leave balances. Make them work together.			Assess the need for and use of Transit Subsidies in regions/HQ where they would use public transportation regardless of the benefit. The could be some cost savings there.		
1193								
	1193	5/22/2017	I am slowed down by the current requirement to get any external communications, inspections, and enforcement actions approved through Headquarters and the Administrator's office. This is occurring due to the lack of Regional Administrators that are trusted by the Administrator to implement EPA's mission. These delays mean that EPA cannot quickly respond to citizen's complaints because we need approval from the administrator's office to visit a farm or a power plant or a mine site. These delays mean that pollution is allowed to occur while we sit in our offices and wait for Headquarters to approve our work. The Administrator's office needs to trust the Acting Regional Administrators to do their jobs and not micromanage all of the region's work.	EPA needs to maintain its current budget and staffing levels in order to have enough staff to support our state, tribal, local, and federal partners. EPA needs to maintain its current funding levels of the many grants that EPA provides to all of these partners. The president's proposed budget threatens to cut Public Water System Supervision grants to states to monitor public water systems and protect drinking water. The president's proposed budget threatens to eliminate all funding to the Chesapeake Bay, which has begun to improve in recent years thanks to EPA leadership and financial and technical support. The president's proposed budget also threatens to cut funding to EPA's Superfund program, which Administrator Pruitt has said is one of his priorities, and the Brownfields grant program, which would reduce EPA's ability to	The Administrator needs to trust the Acting Regional Administrators to be able to communicate appropriately with the public. Currently, all external communications need to be vetted through the Administrator's office, which means the Regions cannot provide good customer service and prompt responses to the public and the American taxpayer.	Our state partners are already dealing with smaller budgets and fewer staff in their environmental programs. In order to maintain environmental protection for all Americans, the Administrator needs to stand up to the president's proposed budget and advocate for maintaining EPA's budget in order to continue to provide funding and grants to our state, local, and tribal partners.	EPA should develop and implement electronic concurrence packages. Currently, we need to print out and walk around concurrence packages for letters, mailings, and enforcement actions. An electronic signature system for concurrence packages would improve efficiencies and allow for more effective processes.	In order to be best aligned with our state partners, EPA needs to maintain its current budget and staffing levels in order to have enough staff to support our state, tribal, local, and federal partners. EPA needs to maintain its current funding levels of the many grants that EPA provides to all of these partners. The president's proposed budget threatens to cut Public Water System Supervision grants to states to monitor public water systems and protect drinking water. The president's proposed budget threatens to eliminate all funding to the Chesapeake Bay, which has begun to improve in

	1194	5/22/2017	Changes in priorities. Uncertain funding situations.	Community outreach to schools, NGOs, local governments, etc.	Engage in open conversation. Define and mutually agree upon program directions, goals, etc. Honesty is the best policy.	YES. Eliminate landscaping and introduce zeroscaping to EPA campus. Simply allow native species to grow on campus without introducing new exotic plants every spring, etc. This would save labor, money, and other resources and would only require periodic trimming, mowing, etc. This would make grounds more eco-friendly to native pollinators, etc. Can also implement and use on-site composting for campus lawn maintenance instead of purchasing mulch, etc.	Get rid of internet explorer and replace with Google Chrome.	Develop more points of communication/contact between different agencies.
1195								

AMERICAN OVERSIGHT

	I
1193	
1194	Yes, EPA should not spend millions of dollars to fund 10 additional full-time security staffers to act as the Administrator's 24-7 bodyguards. This is a waste of OECA's budget funds and diverts taxpayer dollars from where they could be better spent in protecting human health and the environment. In the private sector, the three CEOs for Yahoo, Google, and Apple had a total 2016 security budget of $1.115 million. Asking taxpayers to pay for such bodyguards is a ridiculous waste of money.
1195	I can't think of any.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1196	1195	5/22/2017	The current routing process to get documents signed is inefficient due to the majority of staff working off-site multiple days. Having to physically sign off on a document before it can proceed can often be delayed by multiple days due to one person not being in the office. I would suggest that we invest in a electronic routing process that way staff could review documents anywhere they are located.			EPA should get out of the business of community outreach, for example Watershed oriented work with community groups, these activities are great but they aren't regulatorily required and therefore in these lean times should be minimized.	Our tools are somewhat antiquated, especially inspector related tools. Having real-time access to data and GIS location information onsite during an inspection could make activities much more efficient and effective.	
1197	1196	5/22/2017	A clear and consistent budget would allow the EPA to work towards the goals set out by the American people. Constant indecision surrounding the budget negotiations and whether or not 30% of EPA (or the entirety of ORD) will be losing their jobs has a negative effect on employee moral and effectiveness.	Do NOT cede all power to the states. There is a clear need and role for a national environmental agency.	Provide more funds and FTE to support EPA's current roles and responsibilities. More FTE to interact with states, tribes and local communities will make sure their needs are heard on the national stage.	To start- Reduce the budget and FTE for the reported full time security detail that Administrator pruit has requested. This budget should be reduced to 0, just as all previous administrators have had. Almost 1 million dollars could be saved, according to recent reports.	ScienceHub should be done away with. The entire peer review process of publication makes this entire database redundant.	State agencies and federal agencies WILL NEVER have 100% alignment of interest. This attempt to "hand responsibility back to the states" is a transparent attempt by political appointees to place the responsibilities of federal agencies into the hands of less friendly and gerrymandered state legislatures, where they can then be destroyed quietly outside of the eye of the national public. So in the end, the EPA will never "accomplish more by realigning with states" and this idea is laughable.

AMERICAN OVERSIGHT

	I
1196	
1197	The private sector does not have answers to all questions. Don't send out employee surveys that will be summarily ignored. Stop focusing on the notion that one must cut the budget of EPA in order to be "efficient" or to "increase accountability". This is a straw man argument and only provides public cover for those hoping to dismantle the efforts of EPA in order to enrich Big Polluters and corporate connections.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1198	1197	5/22/2017				I suggest that you ask the mail room to first ask the receiver of junk mail if they want it, and if they don't want the junk mail, ask the mail room personnel to call the vendors and have them stop sending flyers, booklets of supplies, advertisements, etc. (junk mail). A vendor that wants to sell there products sends a book to the supply room, contracts office, RA's office, etc., which is not needed and I see so much paper being wasted this way. Stop these vendors from sending something that will be tossed/recycled anyway.		
1199	1198	5/22/2017	The international travel administrative processes for planning and getting approval are duplicative and outdated. Concur and FIAT need to be integrated into one platform that is fully supported by the agency's IT services.					
1200	1199	5/22/2017	Continue the funding that we have had in the recent past. Allow us to maintain the dedicated and well qualified workforce that diligently strives to protect the environment. Base decisions on sound science as we have in the past versus denying scientific fact and trying to silence the scientists that seek to protect the environment.	In general we already have an excellent relationship with the states and most other parties except for those that are violating environmental laws.	Do all that we can to protect the environment. As we have in the past, continue to involve the regulated community and seek input from them, but use the best science to form decisions.			In the past, before there was an EPA, there was a hodge-podge of various state environmental regulations. There was no consistency and many businesses would locate in a state that had the lowest standard so less money would be spent on compliance and protecting the environment. EPA was established in part to bring consistency across this great nation.

1201	1200	5/22/2017	I don't know of anything no longer necessary but administrative support is sorely lacking at many lower levels. Staff shortages and inefficiencies prevent me from doing my job do to too many distractions for one person.	Consistent use of the Conflict Prevention and Resolution Program to aid in collaboration and conflict management strategies during partnering events and planning those events.	See my answer to Q. 2.	Workplace conflict exists at many levels and is not fully addressed by the 1 staff member available for workplace conflict. It seems there is a significant loss of productivity, in excess of 80%, when employees are in conflict and that is CLEARLY inefficient. The Workplace Solutions program, a headquarters only program, needs enhancement to help people deal with civility, conflict, collaboration and other issues in the workplace. Currently the program is having to use contractors to do some significant lifting in group conflicts and is challenged with multiple administrative tasks that seem to distract from being able to help employees. Imagine an increase in constructive	We shouldn't always be looking for new - sometimes we just need to talk and find out what is working so we can consider doing more of what does work, supporting what needs to be supported, and revising the things that aren't working. In the way of new technologies...resources to support implementation is the key.	Each agency has its own culture, so be wary of aligning with other cultures that may not be effective for they type of work.
1202	1201	5/22/2017	having to obtain your immediate supervisors "approval" in order for you to go on a detail or temporary promotion which may allow you to gain useful skills and further your career development - often times you encounter a "selfish" mentality or a manager who "can't afford to lose you" and that then prevents you from forward movement.	having a direct liaison between key offices versus so many layers of people to go through for issues/concerns/topics of interest	a simple EPA hotline would suffice...a way to triage calls/complaints/compliments, whatever the comments or issues may be. they should then go to the liaison in each AAship	utilize the currently available but rarely supported flexiplace programs already in existence. Even though the message regarding these programs come from the top down, it's ALWAYS left to the "supervisor/managers" discretion and majority of the time the request to use these work/life balance options (even during mass transit outages) are denied. It's really quite sad and there are little no repercussions in order to "fight" such a determinations other than to go to the union - which is never seen as a "good" thing and then the employee is left with poor morale and difficulties concentrating on their work.	the use of Adobe connect and/or Skype moreso to enable flexiplace options as mentioned in Q.4	those Agencies which review our documents could be brought into the process earlier, perhaps when we are scheduling our registration review process timelines. USDA, FDA, etc.

1203	1202	5/22/2017	A consistent Telework policy which offers maximum flexibility is vital for a family friendly work force. Inconsistency between managers in implementation is frustrating and unfair. If you want to make EPA a place where people want to work and STAY, then policies need to come into the 21st century and out of the dark ages. Insecure managers who refuse to allow telework, or apply unrealistic and impossible standards of work portability are an impediment.			Over the last few years, the Agency has gone overboard with LEAN activities. 3 or 4 days to figure out something that is simple common sense is a giant waste. Having 3 or 4 full time staff working on LEAN is also a gross waste of precious FTE. Justification for LEAN activities has been "its the only way to get management to change a process." Whose fault is that? The Manager. This is just one of the "fluff" activities the Agency wastes time and money on.	The PeoplePlus Timekeeping System is inefficient and does not serve the needs of the employees. It does not accurately reflect current leave balances, and it is cumbersome to use for any earning of credit time. Employees may not go into the system to cancel a leave request, or change it, once a supervisor has approved it. Employees have to request the Supervisor cancel the leave request, even if the employee simply wants to change the times. Huge waste of GS-14 and GS-15 salary dollars.	
1204	1203	5/22/2017		A sustainable outdoor environment is important for all Americans. But the indoor environment provides untapped potential for significant economic activity in the private sector and increased health improvements for American families, at a time when affordable health care is so needed. People spend roughly 90% of their time indoors where air quality can be 2-5 times worse than outdoors. With a minimal investment EPA can develop a labeling program for healthy homes, utilizing private sector partnerships with home performance contractors and the remodeling/HVAC industry, to transfer EPA's well-established guidance for healthy home upgrades into a robust labeling program for market-rate healthy homes. This type of voluntary program would use EPA's protocols for healthy home assessments (developed in the

1205	1204	5/22/2017	We do all of our formal outside correspondence and concurrence documents on paper and we end up wasting tons of paper...and time! There really should be an electronic management system for letters, enforcement documents, and other materials so that something can go up the management chain instantly and changes can be made electronically in the moment, instead of days later after a supervisor marks up the documents with pen and paper. Then once the documents are finalized they can be printed and signed. So many managers now work from home or in offices across states/cities and doing everything on paper is inefficient. It's 2017, if we can have remote workplaces, we need to be able to do nearly everything remotely that we do in the office, especially something as important as this. This will hold people accountable for their work and produce faster results.				Modernizing our document control systems...too much is done on paper. Every other modern business uses electronic document control systems to send things up the management chain, we should be too, especially since more and more people work remotely; paper doesn't make as much sense anymore. And this will, hopefully, get rid of the constant "oh I was working from home" excuses for not getting important work done by managers. We're only as efficient as the least efficient link in the management chain.	
1206	1205	5/22/2017	As field employees, the logistics of preparation for field work, field sampling, sample shipping, equipment decon and storage require us to work extra hours, but we usually do not know how many hours in advance. So, we have to submit pre-authorization for compensatory time, which is rarely accurate, and requires deputy division director approval so there are often delays. This creates uncertainty in whether or not the field work can occur (if compensatory time will be approved) and can make planning with our state or federal partner difficult. Currently, the Daily Flexible Schedule (DFS) is a solution to this problem; we would already being approved for working up to 11.5 hours of work per day without any additional paperwork or approvals. (Employees sign in and out to document hours worked). However, this schedule is only available in a few EPA regions, and not where I currently work. The Alternative Workschedule Options should be the same across the agency.	Make sharing and storing monitoring data (results, sampling locations, and metadata) easier (both uploading and downloading), reducing replication of similar monitoring efforts.	Provide more transparency in decision making. Staff EPA at appropriate levels to adequately provide technical assistance, when requested, to all of EPA's partners.	Often, technical services and reports are contracted to organizations like Tetra Tech because EPA does not have sufficient staff time to do the work, not because staff do not have the expertise. This costs the agency more money than completing the work "in-house".	Yes, ipads for field work. State government employees have and use them regularly, but they are completely ineffective for EPA field work. They can not be shared (one ipad is required to be assigned to one individual) within an office, the process for getting apps approved for download has been stopped or is completely ineffective, and there is no way to develop forms or apps to replace paper field forms. Completing forms directly on an ipad reduces transcription errors from paper to the computer. Ipads also provide access to critical field data; currently, field employees use their personal cellular plans to check weather, USGS gauges, and traffic conditions.

1207	1206	5/22/2017	When staff morale plummets, so does efficiency and effectiveness. We all understand the new administration has new priorities, but you all need to think about how those are implemented to make sure staff know that the mission of EPA is still important (protection public health and the environment). The email that went out titled, "Our Big Day" was incredibly tone def. Staff described it as poking a finger in our eye with a little extra twist, or just a single finger in our general direction. On the other side, the email with a message from Mr. Pruitt showing appreciation for federal employees recently had a much better tone.	First, you can't be cutting the grants we give to states and tribes that allow them to operate. States and tribes do not have the resources to implement programs and rely on federal funds to do so. Second, we need resources for inspectors to give outreach presentations to the regulated communities (municipalities and the private sector). There are a lot of people out there who want to comply, and this is a good way to reach a large group at once rather than compliance assistance during each individual inspection, which is happening now.		HQ personnel need to reevaluate their travel. Political appointees seem to have the money to travel frequently for meetings, but the regular staff and managers do not have even have enough money for travel to do all the core work we need to do.	Tablets in the field for inspectors - There is a pilot project, but we don't have the money to make this a reality.	When a state asks for our help, we need to give it. There has been a pullback from providing assistance to states since the new administration came on board. I don't think this is what Mr. Pruitt wanted, but it is what is happening.
1208	1207	5/22/2017	Reduction of our vehicle and equipment inventory that takes away valuable assets for use in the field when needed. Reduction in travel and training budgets. --- Placing workers in small, tight, stressful cubicles under pretense of saving space and money, while actually spending more to move branches and people, renovate, and restructure just to put workers in small spaces instead of offices like other professions have, which enables them to work more effectively and privately. Also, reduction in our ESAT contractor workforce, which is often essential in doing effective fieldwork, especially when we have multiple projects going at one time. We continue to try to do more with less, which eventually reaches a state of doing less with less and having reduced work quality and more stress.	See question No 6. 0--- Also a website needs to be created that allows anyone drilling a well to find out what environmental concerns for groundwater in that area have been documented in particular aquifers. A new home could be build and a well drilled in close proximity to a superfund site or old drum disposal area documented by a state agency and the public might never know.	Better communication, more actions after meetings and less additional meetings .... Also, the public needs to be educated and made aware of the environmental contamination we face and the hard work EPA does to characterize, remediate, and protect the public. A TV show about various Superfund sites across the country, for example, could be very interesting and informative to the public. Most people are not really aware of environmental issues and how difficult and time-consuming they are, as well as how dangerous they can be to health. Many people think EPS mainly tries to regulate industry and look at car emissions. But the agency has many many more functions, like emergency response, air monitoring in cities, training state officials, testing watersheds and fish for toxicity, and homeland security assistance, for example.	Sites need to be investigated and characterized more accurately and effectively in a shorter time-frame. Superfund sites are an example. Many contaminant plumes are not fully delineated after 20 years of study, remediation, and long-term sampling. Lack of funding prevents thorough site evaluations, and investigation programs are often not optimized or completed. This results in far more spending in the long term with less effective remediation and additional site assessment to fill in what is missing from the beginning.	New technologies for environmental remediation and clean-ups should always be considered. However, they are not always cheaper at first. If they speed up clean-ups, then the long-term costs could be reduced.	Cooperate with states and share funds for environmental remedial site investigations, with EPA as the lead.

1213	1212	5/22/2017	Almost all administrative requirements are inefficient and require me to spend excessive time on them. Fixing the administrative efficiencies would allow me to be more efficient and effective at my environmental work. Administrative processes are inefficient, in part, because multiple organizations deal with the same issues and give conflicting advice about how to perform the same administrative processes. We either need one point of contact to go to with any questions (e.g. how to hire, how to discipline, how to buy something, etc.) or we need dedicated support staff assigned to each environmental program to do these things for us when we need them done. Despite their inefficiency, support functions seem to receive extra resources despite/because of their inefficiency. This prevents me from doing my job effectively, because they take limited resources away from programs like mine. It also does not provide incentive for efficiency, because	Consider detailing EPA staff to state or local environmental agencies. EPA staff will learn more about the states and local perspective, and can bring their knowledge of federal requirements to the states and locals while contributing to their work. This has been done before and has worked well in the past. EPA staff could also be detailed or assigned to work on environmental issue in the regulated community. For example, this could include doing work on training, industry-specific research, or coordination at a local emergency planning commission or a POTW. As another example, if the Cattleman's Association wanted to provide free training or information to ranchers about solutions to environmental issues, or the Portland Cement Association wanted to conduct	We could improve customer service by providing clear, consistent, and timely assistance to these stakeholders when they ask us for help in understanding the regulatory requirements we impose on them. Removing the position of the Regional Administrator and the regional front office, and letting staff in each regional program report directly to their corresponding AAship, would create national consistency in interpretation of our regulations and quicker responses to stakeholders who ask us for determinations. Also, the same appointee (AA) should be in charge of writing and enforcing the rules in a program, to ensure consistency in agency interpretation of our rules. In other words, most enforcement staff should move back to the programs. If the rule writers think a rule means one thing, and enforcement staff thinks it means another, and we can???t agree, then	First - don't pass these survey results along to SES career managers and expect implementation. If SES career managers wanted to be more efficient and knew how, they would have done it already, in order to move resources to where they'd like them but can't get approval for them. I see two opportunities, which could be addressed while maintaining environmental protection for all Americans: improving the performance and effectiveness of agency managers, and reducing the inefficiency of administrative support functions (IT, Budget/Finance, and Human Resources). 1. Performance of Managers		We have done this a lot since sequestration, and most of the low hanging fruit is gone.
1214	1213	5/22/2017		Improve communication between all interested parties and encourage staff details to foster understanding of different perspectives.	Keep websites up to date and interactive. Not rely on Federal Register Notices for everything.		Better communication between Agencies could promote processes that work well and help discourage those that don't.	Promote inter and intra-agency detail opportunities to regions and state agencies and temporary job swaps.
1215	1214	5/22/2017	Training - as an employee for 4 months it seems to be assumed we (new employees, and even some career employees) know all they need about certain programs. (i.e. Compass Data Warehouse; People Plus; Budget processes; ULO's and deobligating funds) to mention a few	Removing the enforcement that have been in place for a while are not going to help achieve a better environment. We need those restrictions and certifications in place to maintain a level of safety and cleanliness along with the total buy in of the government and citizens alike. Too many people get wrapped up in the financial possibilities and forget what the results could do to the world of the future	I, by nature, am a customer service oriented person and give to better everyone else over myself. This is not the case when it is decided by larger corporations involving money vs people	Oh yes! forced retirement of employees in their 70"s (at the least) that are taking up office space, lab space and not contributing to our goals in any way		there are a lot of redundant activities going on in all departments of government. If there were specific guidelines that were used by all, reports and time consuming activities would be easier to put together. Cooperation between programs? not likely because of a fear of power and funding

	A	B	C	D	E	F	G	H
1216	1215	5/22/2017		In some programs the drive to measure the impact EPA grant funds creates problems with partnerships. EPA managers are so anxious to isolate and account for EPA funding that the funding gets "insulated" and doesn't work well in the context of the bigger goals of the partner's efforts. Partnerships often require flexibility and participation in a larger effort/goal .... EPA sometimes is unable to fully participate in achieving overall environmental goals because of the demand for isolating and documenting the results of our funding contributions.	Better mobile equipment for most all employees ... cell phones ... good portable PCs. Public Wi-Fi in EPA meeting spaces. More robust/serious compliance assistance help. More investment in researching and in providing information and assistance for compliance and beyond compliance solutions. Better manage EPA's program to eliminate the split between enforcement and assistance ... create an integrated approach with adequate research and workforce oriented toward assistance including field workers (like inspectors).	1) Many of our core systems are often inefficient and cost hundreds of hours of unnecessary processing and fixing time. Issues: 1) systems come and go to quickly so aren't adequately refined, 2) systems often have incredibly long documentation that is provided as a user manual ... these are often completely inadequate ... need systems that provide intuitive interfaces with manuals that are oriented to user needs - not some exhaustive manual of hundreds of pages that might have a couple of "hidden" pages that might help. 3) user reports are often not made with users in mind - seem to be written by programmers per their own ideas or by some kind of group writing process that neglects to ask users what	Need better APPLIED - truly APPLIED - research to assist technological advances in reducing pollution. Need to step-up all aspects of reducing GHGs!!!!! Need to respect and forcefully use proven science regarding Climate Change to protect the environment.	We need to come together with other Federal agencies and States to align our approach to pressing environmental issues. GHG reductions is THE obvious place where we are floundering and really out of line regarding shared responsibilities.
1217	1216	5/22/2017	Excessive time entry requirements. For those who are on credit hours and participate in episodic telework time is entered multiple times: 1. to request episodic flexiplace (via email), 2. in a Excel spreadsheet tracking sheet, 3. Leave slip, if taking leave or using credit hours and 4.) in People Plus. In addition, our work unit requires us to take a screen shot of the submitted People Plus time and submit that with the FWS tracking spread sheet. It would be most helpful if we could put our requested schedule for the coming pay period into People Plus a few days before the pay period including leave, credit hours and work at home (all in one form) and then confirm the timesheet at the end of the pay period. All the tracking and reporting nearly defeats the purpose of having flexible work schedules.	Tailored project management training for grant project officers on how to develop guidance, negotiate workplans and track progress toward project goals. Refocus on environmental results by using environmental indicators such as water and air quality that are used as indicators of progress rather than for punitive bench marking. Actually figure out what the feedback loop is between activities and environmental quality rather than measuring "widgets" or "beans".	Many public questions can be answered with a user friendly website with good concise explanations. If we want to improve customer service we should probably figure out how to assess and measure our improvement.	No.	Provide support for adopting electronic forms of reporting such as the hazardous waste e-manifest system to bring old systems up to date.	I don't see much overlap in our work with other agencies. EPA oversight of State environmental programs is critical to protecting human health and the environment. Every time EPA has stepped back from oversight we see environmental disasters in States that are not held accountable.

1219	1218	5/22/2017	First, our organization has lost many people to attrition, and they are not being replaced. Each year, procurement and other actions become more stringent, taking more time and effort to complete. We are at or below critical staffing levels to achieve our mission. Second, our new Administrator is continually "bashing" our EPA workforce, which consists of a highly trained and motivated group of professionals. This country is fortunate to have us working on their behalf. The Administrator needs to stop the "bashing." Not only is it unprofessional, it is hurtful because it is misleading and poor leadership.	Partnering takes a lot of energy, and generally relies on senior staff to make the connections. We do lots of partnering already	The tools for managing email lists in Microsoft Office are limited, yet some of our email lists contain upwards of 300 individuals. Dealing with these lists manually is tedious, slows the update process, and wastes time. EPA could acquire email list management software and make it available to those who manage email lists.	In Office of Research and Development, we have many layers of managers. They are high priced, and it is not clear in many cases, what they are contributing to our effectiveness. In general these are the non-supervisory managers; without clear line roles, their responsibilities seem to be "made up" rather than essential contributions to the mission. We also have Title 42 managers/scientists. While some contribute to the mission, others just "hang out" until they can get a better (more permanent) job. Finally, since Title 42s are not in the same GS pay system as most employees, when Title 42s are supervisors, they can have a different perspective and understanding than regular employees. This can lead to	EPA employees must manage 10 to 20 passwords or more, one for each system they use. We could have password "Lockbox" software or hardware for each employee, to organize and keep track of passwords.	In my experience, other Federal agencies try to take all the credit for jointly-planned and funded activities. EPA needs to be assertive about taking credit for its work and research, with go-to web information and research results that are easy to find and access.
1220	1219	5/22/2017	I believe it would save time and resources if an electronic submission process could be established for Federal Register (FR) publications. We currently need to submit the FR notice and other materials on a CD-RW along with paper copies of the signed FR and typesetting request. We then send the package via pouch mail or FedEx to the FR Liaison Team who reviews it and sends it to NARA. I believe a system should be set up with NARA so that we can send the entire package electronically, without a CD-RW or paper copies.					1. Working with NARA to streamline the Federal Register publication process. Specifically moving to an electronic system so that we don't need to send CD-RWs or paper copies. 2. Coordinating with the Department of Energy to provide natural gas or clean power to rural communities that rely on wood as a heating fuel. In the Pacific Northwest, many rural communities the air quality is impaired because of elevated particulate matter concentrations. Developing the infrastructure for natural gas or clean power is costly and difficult for states, tribes, and local governments to do on their own.

1221	1220	5/22/2017	1. Lack of a budget with known funding levels prevents us from making long term plans or to enter into longer term agreements that would mean lower costs for the Agency. We could see better rates on contracts if we could enter into 2, 3 or 4 year agreeements. 2. Processing of procurement actions is unbelievable lengthy and complicated requiring 6 - 9 months for simple procurements of hardware or software and years for services. Our OAM has added so many levels and requirements, making it nearly impossible to accomplish our mission in a timely fashion. Need to streamline all procurements. If on GSA schedule, allow for direct purchase without the need for a recompete. Do not require a CO in program offices for every piece of hardware or software. 2. HR processing is another very very difficult area. We are unable to fill vacancies for critical positions; unable to provide opportunities for advancement to talented staff, and unable to get HR paperwork processed in a reasonable	Provide more muscle for the states and tribes to fight polluters across state/ tribal borders. Provide more federal resources from the enforcement and legal community to assist with investigations, research and litigation.	Provide more information to the public and press about those companies and members of the regulated communities that are abiding by the rules and provide a positive influence on the environment. User the bully pulpit of EPA to advertise those bad actors who pollute, break and evade environmental regulations in an effort to "make a buck" over life and well being of people. It is critical that this Agency level the playing field for those that abide by the law and not let those who break it, or who value money over human life, get the upper hand.	I think we have seen where the American public can be a force for positive change if we can provide them with the honest facts. Empower the public to report on environmental problems, empower them by providing honest information on who is doing what, where, and how. Provide them information on the impact on air and water from their local industries and companies. Streamline the reporting on environmental issues.	Our internal systems are horrendously out of date and inefficient. Our HR system, our purchasing systems, our travel systems are all out of date and inefficient. Think Amazon or Expedia styles systems for efficiency, ease of use and portability. Allow staff to be utilized across location. If a talent staff member is physically in Region 1 and his or her skills would fill a vacancy in HQ or another Region --- let that happen, and in fact encourage it -- HQ and the other Region would benefit but from his/her skill but also from his/her different perspective.	
1222	1221	5/22/2017	We might have is too much internal reporting. There is value of this reporting, as it helps to keep headquarters informed and ensure essential tasks are not overlooked. That said, it takes up time we could otherwise be using to get our work done. We are already severely understaffed, so any saved time would be helpful.	I believe we already do a very good job at working with state, tribes, and local communities, but we are always open to ways in which we can improve.	I believe we do a very good job at working with state, tribes, and local communities, and they often reach out to us when they have difficult problems. It would be nice to have enough staff for outreach to the private sector, but we don't even have enough staff to carry out all of the tasks assigned to us by Congress, and additional staff is not in the cards for the foreseeable future. EPA has been overhauling its website, so if they can make it easier for the private sector to find the information they need, that would be helpful.	I would suggest that we hire a firm to overhaul our computer systems. We have so much data, but it tends to be in program-specific files and systems. I think there is a lot of potential if it was possible to have all of that information easily accessible to all programs. Ideally, such a system would be designed with the idea of simultaneously sharing non-confidential information with the public, which would improve the value we bring, and would likely reduce the number of FOIA requests. The largest problem with this idea is that it is a "spend money in order to save money" solution - I don't expect Congress would be interested in giving us more money, even if it was for a good project like that, and	See my answer to Q4.	Honestly, I think we really do a good job of that already.

AMERICAN OVERSIGHT

	I
1221	
1222	This is tough. I came from the private sector, and I had a lot of ideas when I came over. The fact that the laws we implement are all media-specific, and function in different (and sometimes very different) ways, makes that a tougher problem than first appears. I think there is a lot of efficiency that could be gained by reforming our contracting systems, but those rules are not in our control. One area where we tried to improve efficiency, and I believe failed, is when we developed shared service centers. For example, tasks related to Human Resources were all centralized in Las Vegas. In theory, that certainly

1223	1222	5/22/2017	People Plus timesheets: Currently we are required to submit our completed timesheet before the end of the pay period. If you don't submit by mid-day on Thursday the time keeper starts sending emails to the employee and the supervisor. We used to submit timecards on the Monday following the pay period end. Submitting the timesheets early results in significant double handling for corrections. For employees that have site travel and have to account for their time to site specific accounts codes, work requirements can change quickly and Thursday and Friday may not then be accurate. Not to mention sudden sick leave of other reasons that leave is needed at the last minute. The corrections can be frequent, and this causes many folks to have to re-handle the timecard approval. Going back to a Monday submittal would alleviate this inefficiency.					
1224	1223	5/22/2017	Should employees be effectively trained, and duties outlines. Telework could be an option to cut cuz on transit subsidies.	Continue to develop partnerships between both state, tribes, local and private sector.		Institute Telework options with mandatory in office days after 90 days.	Ensuring we have the most updated and full versions of software/programs to eliminate man hours and repeating task or creating more steps to accomplishing task that could be done quickly.	I agree, realigning and restructuring would be effective in cost savings.

AMERICAN OVERSIGHT

	I
1223	New Superfund contracts: The New Superfund contracts will required much more labor and contract expertise from the remedial project managers. Since each work assignment will need to be competed from the pre-qualified pool, there will need to be selection boards and selection board leads that can write up the advantages and disadvantages with significant skill and expertise to avoid contract protest. The new process will be similar to the USACE process. From my experience with this, EPA will need additional contract officers, additional contract officer representatives and additional contract specialists. Also this will add to the already large work

1225	1224	5/22/2017						
1226	1225	5/22/2017	That our IT security is so frail that we are not allowed to do any EPA work on home computers is hurting productivity. "Loaner" laptops are ineffective for occasional work at home. Apparently, emailing spreadsheets or documents to my EPA address from my personal address is more risky than receiving spreadsheets and documents emailed from collaborators. As a professional, I have never "charged" the government for time I spend working outside of business hours. Prohibiting the use of personal computers means I no longer work on weekends at home. This policy seemingly is incompatible with telework but no one can explain how it is not - even though we have had telework training.	Effective partnerships need time (literally, years) to develop and become productive. This conflicts with two tenets of the ORD business model. First, ORD is suppose to address issues of national concern. Research in a particular locale or with a particular partner is just a means to a national end. This devalues the partnership. Partners want help with their specific problems - not hopefully/someday benefit from a national solution. Second, the typical research cycle is too long to support regulatory needs but too short to support many issues of state and tribal partners. A solution is to identify the beneficiaries of research outputs - admitting that they may be less than national in scope - and committing resources for the duration of that research effort.	Be at their table and stay at their table. ORD needs to prove that we are a committed partner and serious about sticking around for as long as needed.			

AMERICAN OVERSIGHT

	I
1225	I know this sounds obvious, but a person should live in (around) the city where the majority of their job takes place. We should not be paying for regular travel for someone to go to another state or part of the country, simply because they do not want to relocate from their original location. Senior Agency/AA-ship leaders should not have to use Agency travel resources (i.e., money) to go to the DC office. In the regions, travel money should not be used for senior managers to travel to the regional office. In ORD, which is geographically spread out, Lab/Center senior managers should all work out of the same location (e.g., DC, RTP, Cincinnati). A Lab Director shouldn't tap into travel money to spend
1226	Successful organizations are agile. EPA is not. Successful organizations replenish talent pools with new hires or training. EPA does not. Successful organizations invest in technology (both maintaining work-horse instruments and buying innovative new equipment). EPA does not.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1227	1226	5/22/2017		EPA should have more internal resources. States and local communities often look to EPA staff for support in implementing programs, even authorized states. The more EPA has staff available to assist States, the better, quicker, and more efficiently State work can be completed.	EPA should have more resources, both in FTEs and money. The more people that are available to help states, communities, the private sector, and the public the better they will be served by EPA. Also, travel money to actually have EPA staff visit those areas is very important. The regulated community and public are always appreciative of meeting the regulator face to face. The more that communication can take place face to face, and not just through letters, the better the reaction from the communities.		Many computer programs could be updated.	Need more people and time to be available to the states. The states often operate under workshares with EPA, but if EPA cannot hold up its end because there are not enough EPA staff members, then the work does not get done.
1228	1227	5/22/2017					I have responded to the survey already but wanted to add this thought: If you implement any system or process change on Agency staff in the name of efficiency or better management, please be willing to use or participate in the process yourself. Too many times, I have seen the latest "flavor du jour" (such as TQM, project management, etc.) trotted out with a lot of expensive training. Managers then do not have an idea what to do with this newly-found knowledge or technology, and then everything gets forgotten. Please be willing to live your lives the way you want ours to be lived.

1231	1230	5/22/2017	No comments to add.	No comments to add.	No comments to add.	It might be beneficial to take a close look at what appears to be duplication of services within the Agency. For example, is there a need for individual offices to have their own fleet of government vehicles? Another possible area, is that of Human Resources, a close look at program offices (not including OHR) across EPA reveal at least one rather large Human Resources Division. However, it could be that the current approach evolved because it's more efficient & effective, but none the less, may present an opportunity for cost savings.	No comment.	No comment.
1232	1231	5/22/2017	"Details" and "acting" positions negatively impacts efficiency, effectiveness, and cooperation in the Office of Superfund Remediation and Technology Innovation. In the 1.5 years I've been in my position, I have been under the management of two different division directors and four different branch chiefs. Additionally, nearly every other branch and division director position has had an "acting" manager in this time period. "Acting" managers know less than their staff, but yet the acting managers make the final decision about their staff's work. "Acting" managers have been hesitant to make decisions because they know their management term is limited. Since so many managers are "acting," we have an entire office of unstable transitions: people unable to finish projects, unable to cooperate and work together, and continually unfamiliar with the purpose of the work. The prevalence of "acting" managers is due to the inability to fill open positions. Right now my branch has an acting branch chief that will leave	For contaminated site cleanup, relationships/partnerships should be emphasized and the EPA member of those cleanup teams need to be an empowered member of that team. Combining EPA remediation with stakeholder reuse/revitalization efforts has shown to be incredibly successful (example, Milltown Reservoir Superfund site-https://semspub.epa.gov/work/08/1570716.pdf). Headquarters and regional staff understand EPA's role is ensuring health risks are reduced at sites, but also recognize the benefits (cost reduction, faster cleanups, community satisfaction, ecosystem services, job creation) of incorporating reuse/revitalization plans with partners. These staff must be empowered in their partnerships, and given the latest tools, training, and expertise to be effective, cooperative partners.	EPA needs the capacity to update technology and websites in order to provide better customer service. EPA has outdated software, laptops, and other basic technical equipment which slows down communications.	Green and sustainable remediation is an untapped opportunity to reduce costs and inefficiencies. Stakeholders embrace this concept (States: http://www.itrcweb.org/Team/Public?teamID=7, industry: https://www.astm.org/Standards/E2893.htm, private sector: http://www.sustainableremediation.org/). Habitat restoration is an untapped opportunity to reduce costs. There is data to support that native vegetation costs less in the long term than turf grass, along with many other benefits (http://www.wildlifehc.org/knowledge-resource/remediation-project-guidance/). These efforts need to be encouraged at the highest	Soil amendments and native plant revegetation are underutilized, cost-effective approaches to site cleanup, especially mining site cleanup. (Example site: https://clu-in.org/download/issues/ecotools/CaliforniaGulch-CaseStudy.pdf). There is opportunity to reuse waste materials (e.g. compost, biosolids) and support agricultural community by boosting native plant seed market. Additionally, DASEES is an underutilized, free software tool which can document stakeholder/community input in real-time, transparent method and keep EPA cleanups accountable (https://cfpub.epa.gov/si/si_public_record_report.cfm?dirEntryId=238232).	Ecosystem services approach is a scientific, social, economic, human-focused method to manage the environment. The approach realigns activities of shared responsibility between EPA Offices, other federal agencies, and states (https://nespguidebook.com/). Despite reports and guidance (https://yosemite.epa.gov/sab%5Csabproduct.nsf/F3DB1F5C6EF90EE1852575C500589157/$File/EPA-SAB-09-012-unsigned.pdf), its use has not become widespread. In the Superfund program, ecosystem services approaches can help align efforts that the

1232	All personnel should work from home or take their compressed/maxi flex days on Monday and Friday. The Potomac Yard South building is practically empty on Mondays Fridays- it could be closed completely (turn off lights, no heating- save money!!). I am **[REDACTED B6]** in the Potomac Yard South office for eight hours every day, and I have experienced many Mondays and Fridays where I am the only human on my floor, and very few employees are in the entire building. How silly that this building is kept open for so few people, who come into the office only to call/email their teleworking coworkers! Additionally, "hoteling" policies could be implemented for a subset of personnel.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1233	1232	5/22/2017	All administrative requirements, management procedures, organizational processes are mission critical in order to do my job effectively. My job is to protect human health and the environment and I am currently efficient, effective and accountable in this work.	Ideas for achieving better environmental results from partnering with States include stronger EPA led enforcement of mobile source provisions of the Clean Air Act. Authority for enforcement of Title II of the Clean Air Act is not delegated to the states, tribes, or local communities.	Ideas for providing better customer service to states, tribes, local communities, the regulated community, and the public at large include allowing EPA press releases highlighting the positive results EPA work delivers to the American states, tribes, local communities, the regulated community, and the public at large. EPA's work protects the water we drink and the air we breath in many ways which are not easily appreciated by the entities that benefit unless there is clear communication of the benefits of our work.	One opportunity to make changes at EPA that would reduce costs and inefficiencies, while maintaining environmental protection for all Americans is to save the staff time used for responding to surveys which are not mission critical including surveys with topics such as "Suggestions for Creating a More Efficient, Effective and Accountable EPA".	Consider eliminating the use of the Lotus Notes application by migrating tools that are currently only accessible on Lotus Notes to other applications.	We cannot accomplish more by realigning activities in areas of shared responsibility and mutual interest with other federal agencies or states, because we already work effectively with federal partners on areas where jurisdictional or stake holder interests may overlap and within the concept of cooperative federalism with states.
1234	1233	5/22/2017	We have a lot of peer review and this is good. However, this would be more efficient and less time consuming if the peer reviews were only conducted on the actual numbers, tables and figures and the descriptive verbiage added after the numbers were finalized. Arguing over numbers from studies or models is just part of the process and this is invaluable. However, too often, the final numbers are settled on during the review process and so pages of text, as well as charts and graphs, need to be changed to accommodate the revised number(s), resulting in time expended and sometimes, errors.	If more biological monitoring were done by these partners, along with causality investigations, this would help to focus resources and relieve some of the up-front pressure. In other words, it would make a better safety net so that the real causes of harm to human and environmental health could be dealt with.		Focus more on non-animal test results for toxicity endpoints and on gleaning information from the metadata we already have. There is such a vast amount of toxicity data that could be examined for trends. For example, for a particular mode of action (MOA) or adverse-outcome-pathway (AOP) of a toxicant (or chemical class, depending on the data set), one could define the range at which a particular taxonomic group is affected and apply that range to similar MOAs or AOPs without the need to do as much testing. More metadata gleaning might need to be done first and the AOP process supported.	Developing quantitative AOPs (adverse-outcome pathways), in lieu of routine toxicological testing. The result would be much more broadly useable and in the long run, save many resources.	EPA could work with NIH to develop AOPs (adverse-outcome pathways) for ecological endpoints.
1235	1234	5/22/2017	Improve the process for submitting journal articles and make it simple to handle invoices for page charges. Provide guidelines to avoid any unauthorized commitments by the scientific staff in the process. Approval of an article for submission in STICS should automatically include approval by the EPA for all page charges so unauthorized commitments would be automatically avoided.	standardize methods used to create emission inventories so the same method is used across the states. If a state does not provide sufficient documentation to understand their emission estimates in the NEI, EPA should reserve the right to ignore it.	better web interfaces that are fast and efficient; more dynamic web content	encourage more telework	use electronic lab notebooks	If the states used consistent methods to estimate the NEI, the EPA would not have to do things over again.

AMERICAN OVERSIGHT

	I
1233	No, I am not aware of best practices in the private sector we should consider adopting across the agency to improve our efficiency, increase accountability, or reduce costs. We are public servants dedicated to the mission and are already accountable to the American people to protect human health and the environment.
1234	
1235	use of telework; use of electronic lab notebooks

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1236	1235	5/22/2017	IT security procedures should be streamlined so we can keep our computers safe without unnecessary slowdowns in our work. For example, permission to install the software required for specialized work should require only one or two levels of approval. OEI should make access to the "cloud" easier and more readily available. OEI needs to prepare for the processing, storage & IO needed for large-scale data analytics that will allow us to better quantify the impact of our work. The contracting process-- especially the approval of work assignments under existing contracts, needs to be more efficient.		I work on the MOVES model which is used by state and local governments to estimate air pollution emissions from cars and trucks. We need resources to make the model run more quickly and to improve the interface so it is easier for others to use.		Every EPA conference room should be equipped for easy teleconferences and for large-screen display of information. We spend too much time searching the building for projectors and getting them set up.	
1237	1236	5/22/2017	Staff who are contracting officer representatives (meaning we manage individual task orders because we have substantive knowledge about the topic, but we do not work full-time on contracting) have to take at least 12 hours??? worth of contracts training mandated by OMB that is delivered through a Dept. of Defense system. Easily 75% of this training is irrelevant to our work and a waste of our time. Some of this is because we don???t manage the overall contracts, but some is because the training is specific to DOD policies that don???t apply to us. OMB needs to recognize that there is a difference between contracting officers and contracting officer representatives and not require the same one-size-fits-all training for both. Moreover, OMB or EPA should allow some tailoring for different offices. For instance, I will never be purchasing products or equipment through a contract, so it???s a waste of my time to take an entire course about that topic.	Working with partners, we can help prevent pollution instead of cleaning it up by using voluntary approaches, but this would require political appointees and the Administration to recognize that just because something isn???t mandated by legislation doesn???t mean that it isn???t appropriate for EPA to do. Many of our voluntary programs get environmental and health benefits at less cost (to the government and the regulated entity) than using regulatory approaches, and they can bring cobenefits like jobs, entrepreneurial opportunities, and safer and more attractive neighborhoods. We create and refine these programs by working with states, tribes, local governments, private-sector entities, and nonprofits so that we can ensure that we are meeting their needs while still meeting statutory requirements	We best serve everyone by providing accurate science and unbiased information on our website, as we have done for many years, rather than removing this information based on the industry-driven agenda of new leadership. Removing information about an initiative from the previous administration is an expected and justifiable action by a new administration; removing scientific data and plain-language explanations of that data is not. Removing climate change data and information from our website sends a message that the new administration doesn???t care about objective facts or the public???s right to see information that public money has paid for. EPA???s mission is to protect human health and the environment, and climate change is the preeminent threat to both. We cannot work toward our mission without addressing climate change. Pretending it doesn???t exist doesn???t make it go away, and it	It seems like an untapped opportunity for the new leadership to trust that career staff are professionals who do good work based on objective scientific analysis, and to study the examples of previous Republican administrators who have respected the staff and the extensive processes that we use to create policy and regulation.	Sharepoint is a ridiculously clunky interface and completely unintuitive to use. Unless I'm using a direct link, it takes at least several minutes to figure out how to find what I need or to get the item I need in a legible form. There has to be a better system for sharing files and other information internally and externally. We are told that we can't use any other service (such as Dropbox) to share files externally, but it is a major hassle for external people to access a file on Sharepoint.	Working with other agencies that fund infrastructure, such as DOT, helps us get the most out of infrastructure investments by aligning water, transportation, energy, and other infrastructure to get the most impact from it and make sure these investments are reinforcing each other. It can also help states and localities get the most out of these investments by making sure they???re aligned with economic development, environmental protection, and other community goals. Coordinating infrastructure investments also makes it easier for communities

AMERICAN OVERSIGHT

	I
1236	"Agile" software programming is a best practice in the private sector. We need more support from our contracting staff to incorporate agile practices into our software development contracts.
1237	One best practice that EPA and other federal agencies used to employ but that has apparently been eliminated by the new administration is planning for how climate change is affecting and will affect our operations and investments, as well as the American people. Hundreds of major companies, including multinational energy companies, are planning for climate change impacts; it???s simply good business practice and a wise use of limited resources. It???s governmental malpractice to ignore the fact that climate change is happening now and will continue to happen. If we aren???t planning for it, we are sentencing our government to waste taxpayer money???for example, by continuing to

	1237	5/22/2017	The capacity of the Agency to administer its Federal Technology Transfer Act responsibilities is extremely fragmented, under resourced and made overly complicated by internal administrative procedures. This could stand improvement if the new leadership thinks that the Agency should follow the mandates around technology transfer.	Over the last few years, the Agency has been working with a coalition of communities across the country that have seen the value in better organizing their assets in water to solve local and regional water issues and create jobs at the same time. These community led coalitions are called water technology innovation clusters. (https://www.epa.gov/clusters-program) The development of these innovation centers is based on deep working relationships among a number of players including research, small and large businesses, water utilities, federal, state, local programs and other groups such as investors. Each is unique, fits the community and work on the water problems relevant to their geographic area. In Cincinnati EPA, we have been working with the community led "Confluence" organization with great success in	We need to listen, listen, listen and fully understand the dynamics of the situation on a long-term on-going basis. We need to know the people personally, what makes them tick. We have to turn our attention to helping the communities address their issues. Very problem solving oriented. These should be approached from a coordinated government response. EPA can't do it alone and should not try to. Many of the problems are economic in nature. We can't assure safe water for example in communities where the public is under the poverty level. We can't run these programs from DC or even at the regional level. We need to be in the communities we are charged with helping and look for new and creative approaches. Need some really smart people with the right skills to work with the community leadership.	We need to invest in the capacity of state personnel, their knowledge and education help EPA make progress on meeting its goals. With the reduction in state budgets and reduction in salaries, probable high turnover rates, and fear of being jailed for technical errors, the qualifications of these personnel are probably the worse they have been in decades. As a result, they rely on EPA to guide them. We could encourage specific workforce development in this area and find ways to prioritize them in state workforce development initiatives. This is an issue for water plant operators as well. Recently, there have been papers written that highlight that operators with a college degree are more	There are many new water technologies that are emerging on the landscape, drones, sensors, etc. These should make more information available in real-time however, we don't have a group in the Agency that is the focal point for getting these "approved" for use. We need to be much more strategic in this to make sure that these new technologies make it to the market and where appropriate have the confidence and EPA ok for use. This is a complex topic requiring dialogue and action within the Agency. Additionally, there are some basic issues that should be addressed such as metering and measurement of water. For example, water meters are not even required in parts of Chicago and parts of	We need to value those activities in the Agency, and the specific people within it, that are connectors with a broader set of stakeholders in the federal family and beyond. These are uniquely qualified individuals but their work goes largely unnoticed and is certainly not characterized as valuable work. This ability to look at how to connect is key to leveraging the vast number of programs across the federal government. Put it in expectations and standards for the SES corps and you will see progress or at least some talk of it. It's somewhat of a cultural change
1238								
1239	1238	5/22/2017	Lift the hiring freeze		Hire more staff			
	1239	5/22/2017	Weekly activity reports. No one seems to read them they just seem to be a way for management to assure themselves that their staff is doing something. Kind of dysfunctional if you ask me.	We need to be working with the agricultural community to show them and bring to them the many benefits that can come from using unmanned aerial vehicles (UAVs). Farmers can greatly reduce their application of pesticides, fertilizers, and water by use of UAV data. Farmers save money and improve the environment at the same time.	Regulations grow and change over the years so that for any regulated entity the regs become more complicated and harder to understand, because they have been piecemealed together over the years. Wholesale rewriting the regs that govern large sectors may be needed so they become streamlined and easier to understand/comply with.	We dual regulate stormwater from construction projects over 1 acre in certain geographic areas. We require a constructor to get a state-wide construction stormwater permit, and at the same time we require larger cities to regulate the same construction sites (often through a permitting program). We could/should do away with the state-wide permit in those cities which are required to regulate their construction projects with a greater degree of scrutiny.	For keeping track of employee's work hours (time-keeping) we have to use three different software systems to input time and request leave. And we always have to input time 2 to 3 days before the pay period is through which means there are constantly corrections that have to go back and be made after the pay period is over.	Like with the agricultural idea given above on Q.2. we could be work with USDA and state Departments of Ag to model cutting-edge technologies that improve the bottom line for farmers and the environment.
1240								

AMERICAN OVERSIGHT

	I
1238	I think we should look at the qualities of best work places. Look we are not Apple, but we have an important and critical mission to the people of this great country. It makes for a tremendous draw for talent that would otherwise go elsewhere. However, we've been terrible at the way we treat people personally and professionally for many years, horrid examples of workplace bias, sexual harassment, good-old-boy/girl networks, lack of respect or understanding of the value of diversity, managers that don't even hold meetings with staff, meetings without agenda's, come on. First rule: engage, respect and support your people and they will do amazing things.
1239	
1240	We spent years trying to develop some new stormwater regulations (that were wrong-headed in my opinion) and the whole effort finally crashed and burned at the end. There needs to be some kind or rigorous evaluation process at the beginning of a regulation change effort to evaluate the merits of an idea before we spend untold hours and dollars on an idea that is questionable from the start.

	A	B	C	D	E	F	G	H
1241	1240	5/22/2017	RESPONSE 1: I suggest administrative audits or Lean projects for each AA-ship and program office to see if there are processes still requiring signature that are done via papers & folders. Are folders being passed around for signature? If yes, could a workflow with a digital signature or approval process be created to replace the need for paper/folders/ink signatures? I would start with OARM since the work of the OARM offices often impact employees directly any improvements to workflows and process in OARM will have a wider benefit. Digitizing signature process should speed-up approval process and eliminate the time needed to track and transport paper folders/documents. RESPONSE 2: Standardize the Agency intranet on one platform such as Drupal. Finding information on our agency intranet is very difficult and wastes the administrative time of our employees. The amount of time staff members invest trying to find information internal to the agency is known as a ???clutter		What are the incentives to provide good customer service? If you look at the private sector model in areas like customer service, the companies who do it well all have incentive programs built-in to their work culture. To me, good customer service reflects on a positive, supportive, well incentivized organizational culture. Respect from manager to employee is a foundational element in creating such a culture. While the government might have less flexibility in terms of incentives, Any manager could hold things like monthly coffees or coffee & donuts or birthday celebrations. In addition, time-off awards can be used as an incentive more regularly. There are lots of ways to create incentives, but managers must start with the desire to do so.	RESPONSE 1: Per the above suggestion, digitizing current paper-based processes will both modernize the process and reduce the costs needed for paper and the associated employees??? time to walk around these documents for signature. Internal resources could be used to create such a digital workflow such as PDFs and SharePoint. RESPONSE 2: Roughly 80% of companies now run on open source software to manage their intranets to save money. However, EPA???s current methods for managing its intranet is extremely costly and not conducive to advancing the EPAs work or saving the organizing money. The agency allows every region and program office to manage multiple servers and	RESPONSE: Implementing the Office of Internal Communications and Office of Environmental Information proposal to adopt a standard intranet strategy and platform across the agency would greatly increase our efficiency. It would improve information sharing and also reduce costs. A platform like Drupal, best known as the open-source platform behind public websites like Whitehouse.gov and our own EPA.gov, is also a good option to manage our intranet since we already invest in it. However, EPA currently allows regions and program offices to use multiple different platforms to manage their internal websites. There is no standard, so the agency is spending a lot of money at all	
1242	1241	5/22/2017	We have inefficient and outdated technology without adequate software solutions for internal tracking, correspondence, docket management and information management. OEI needs a cultural overhaul and change it's role in supporting the agency's mission. Also, staff participating in decisionmaking meetings would result in more informed and better outcomes.	More transparency. EPA already meets and collaborates a LOT with states tribes local communities and industry - let us do what we already do well.	None - EPA already does a great job of this and to say that we do otherwise is ill-informed.	Stop making everything political and support our scientists more. Let them do their jobs.	EPA needs better docket management software for litigation. Also it needs professional ediscovery support so that litigation doesn't drive our agenda under any administration.	This is the third time you asked this question.

AMERICAN OVERSIGHT

	I
1241	1. RESPONSE 1: Have you looked at the Peace Corps model of employment? At the Peace Corps all employees are limited to 5 year terms with up to 2 year???s extension for a total of 7 years. As such, new people, energy and ideas are a regular, normal thing; people do not feel threatened by them. Also, it fosters a culture of learning as people are not overly tied to any work processes or offices or desks or software. The term limits model changes everyone from top management to the lowest entry level employee. EPA seems to be bogged down in insularity???too many people who have worked in the same manner, together for 10 years or more. While these people may have
1242	No.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1243	1242	5/22/2017	Lotus Notes entry plus people plus is redundant. Having to seek approval for speaking engagements and press interviews is time consuming and adds to multiple levels of approval. Direct management approval should be sufficient - most of us know how to do our jobs and represent the agency and the communities we work for. Getting material printed in color undergoes the most ridiculous process - once a brochure or newsletter is designed - it takes no less than A MONTH to get it out the door after multiple forms, approvals and sending it out to a printer. Colored printing costs are now inline with black and white and we should update our process to allow our contractor to do colored printing for our products.	Working closely with our local communities has proven time and time again a successful enterprise. We should bring in more Community Involvement Coordinators to work across project teams to make sure networks and communications are maintained. Maintaining those close working relationships with those entities achieves better environmental results because we already have a good working relationship and work together on designing and implementing cleanup projects on the front end vs only including these entities once we have a proposed cleanup plan. This process allows EPA to achieve cleanup faster.	Working in many communities, I have found that maintaining local relationships through frequent calls and meetings is essential to getting good working relationships. We can do this best if we practice "quality over quantity" and divide projects more efficiently - fewer projects with more staff - so that we can effectively facilitate these discussions across projects. Every community deserves to have the undivided attention of the project team that is working to cleanup up their environment.	Stop having us jump through hoops to get colored printing. The time is what costs, not the product.	We need to have more local control of social media accounts. Regions as well as project teams should be able to communicate directly and get feedback through these mechanisms since this is how most people provide input and feedback these days as well as stay informed. Fewer projects will allow project teams to provide better and more efficient services to their communities.	continuing to focus on the idea of "One EPA" - people expect us to know programs/projects outside of our prospective program "silos" and we should have a more holistic and sustainable approach to communities that provides all these services - Superfund, Air, Water, RCRA etc. We should look at things regionally and assign teams to regions so they can best look at and have awareness of all these projects and programs at once.
1244	1243	5/22/2017	There should be improved time and attendance accounting, including linking absence requests to the actual time reporting. I also suggest prioritizing updates of information technology systems, including electronic pesticide labeling.			Develop faster, more efficient ways to deal with employees with performance problems.		
1245	1244	5/22/2017	As a first line supervisor, I feel overburdened that the number of administrative responsibilities we are required to undertake. I also observe that these requirements become more cubersome when the Agency changes to a new and improved IT system. I would appreciate support for items such as timecard reconciliations, travel review, etc.	In my opinion, EPA has a very thorough process for engaging our stakeholders in the decision-making process. Where possible, I support finding opportunities to engage our state partners in deliberative decision-making discussions, particularly when they are a true co-regulator or implementer of EPA rules.				

AMERICAN OVERSIGHT

	I
1243	Opening local offices within regions has been very effective. This is ideal when wanting to work closely with communities and projects. It also diversifies the governmental work force by taping into local economies and expertise that projects across the region can benefit from. We also do community engagement really well - so much that local and state teams have asked us for our help to train their staff on how to be more effective communicators about complex projects. State and local teams greatly appreciate our support since it is applied inconsistently across many local and state governments. EPA allows for a holistic view and shares ideas with teams

1246	1245	5/22/2017	The management procedures and organizational processes in my current organization, a Staff group performing program management operations for a Program Office, are too rigid, especially as applied to highly experienced professionals like myself. I have been at EPA for **[REDACTED B6]**) It is wasteful of time and resources for respected and experienced senior employees like myself to be required to adhere to a rigid process that requires two levels of review by the Staff Deputy Director and Director (who are Program Management Analysts) for every draft work product and even certain email correspondence that goes to our Divisions, to the Office Director and, often, to another office within the AAship. Essentially no substantive changes have ever been made to my draft or final work products under this review process and it is required even for projects where I am the designated Lead for the Program Office. In addition, either the Deputy Director or the Director of this Staff group accompanies me to every meeting	EPA should proactively inform states, tribes, and local communities of the environmental results that are achieved by these partnerships (e.g., improvements in the health of coastal estuaries, better visibility in national parks and wilderness areas that are enjoyed by Americans, less harmful smog that aggravates asthma and other pulmonary conditions). EPA should present quantitative data and graphical displays to these partners to document the program being made in our joint mission for improving public health and the environment and preserving our nation's natural resources.	See suggestion above.	The suggestion under Q1 if applied at EPA Headquarters would reduce costs and inefficiencies without adversely impacting environmental protection for all Americans. EPA should also make a priority of revamping the Office of Acquisition Management (OAM) so that contracting officers do not leave EPA for better opportunities/promotion potential at other federal agencies. OAM is severely short-staffed and can barely support the acquisition and contracts management needs of the program offices. The "best" EPA contracting officers should be recognized in the same way as EPA's program leads are for outstanding work on developing and	No suggestions at this time, but I'm confident some exist.	EPA could not maintain the CASTNET environmental monitoring network described under Q.7 below, which is essential for accountability and assessing program progress in achieving environmental results without the collaborative support of the National Park Service. In addition, EPA works with the USGS and cooperators in states that contribute to the operation of the LTM surface water quality monitoring network described under Q.7 below.
1247	1246	5/22/2017			Improve the EPA website. It is difficult to find what you're looking for. (I usually do a Google search to find what I'm looking for.) Also, make sure the hyperlinks in the EPA website work.			
1248	1247	5/22/2017	During the transition, EPA employees have been stalled from getting information out to our states and the public without thorough evaluation from our acting regional administrators and external affairs. I hope soon employees will be able to be more open with our states and public, as we were in the past.	We need more communication.	We need to be able to communicate more openly, without so many restrictions.	Yes, we need more open communication, without so many restrictions. I understand some things needing to be properly reviewed, but not every single thing.	We could fund and utilize GIS more.	I don't know how we can. We need each other for checks and balances. We currently work closely with our state counterparts.
1249	1248	5/22/2017	Our contracts team is severely understaffed, delaying extensively myriad contract management functions such as releasing RFQs, awarding contracts, and supporting day to day contract operations. Improving this situation would improve productivity and enable us to serve our constitutions even better.	Voluntary programs have a long history of delivering results in a cost effective manner and can be easily leveraged by state, local, and tribal governments.		Initiate improvements to hiring and promotions; initiate a merit based reward system. Our approach to hiring is antiquated, slow, time consuming, and doesn't always result in the ideal selections for the Agency. Promotions based on merit would be highly motivational.	Our internal systems admin systems can be time consuming and counterintuitive: EAS, Concur, FAITAS, PeoplePlus. Adopting higher performing systems would benefit to the Agency's productivity.	

AMERICAN OVERSIGHT

1253	1252	5/22/2017	Getting bogged down with non-registrant issues that could be more efficiently handles at the regional level.			Let the EPA Regions process EPA Company Number changes (name & address etc.) for those companies that are "Non-Registrant" companies. In other words, these companies have only obtained an EPA Company number in order to become a Producing Establishment or a Distributor. Only when/if they become a Product Registrant should EPA Headquarters get involved with maintaining their company changes.	Modify the Office of Pesticide Programs Information Network (OPPIN) to add a column to the database that distinguishes between a Registrant "R" and a Non -Registrant "N". Then, let the Section Seven Tracking System (SSTS) database (that is already used by the EPA Regions) have "ownership" of this "Non-Registrant" company information. This would also involve giving the EPA Regions special administrative access to the Company Maintenance Module within OPPIN.	
1254	1253	5/22/2017			Don't skimp on community involvement staff, funding, and equipment particularly in Superfund. They work tirelessly with our state partners to engage citizens/tribes in our work to ensure they have as much involvement as they want. Citizens often tell us we are the only people who listen to them.		A "new technology" that could make us more efficient would be to give staff working regularly in the field (in addition to OSCs and press team members) smart phones. About six years ago, some of us were issued flip phones after standing our ground saying we were not willing to use our personal cell phones for work (for a variety of reasons). We still have those same phones with no upgrades coming in the near future. For example, if community involvement staff working in Superfund emergency response communities had smart phones, they could take photos of a cleanup in progress, send them to our web team who can get they approved for posting, and then post them. All of this could happen in a day or so.

1255	I think we should reconsider EPA's telecommuting or "work from home" policy. It should either be eliminated or people should only be allowed to work from home 8 hours once per week. People say they work from home 12 hours per day multiple days per week, which is not realistic. If people were required to come to the office more often, it may lead to additional retirements, and would certainly increase accountability. People should be allowed to work at home on an "as needed" basis, it should not be a part of everyone's regular weekly schedule.
1256	

AMERICAN OVERSIGHT

1257	1256	5/22/2017	In general, to level of management review/approval for even basic decisions is overly cumbersome. Staff and first line managers should have greater ability to make programmatic decisions. The Travel Request System is burdensome, particularly if adjustments are needed to travel arrangements after a TA has been approved. It would be much more efficient if staff could manage their own travel. Also, the admin/funding process for obtaining computer resources (e.g., replacement batteries for lap tops and software to view maps/manipulate data) is overly burdensome.	The ability to meet with partners face-to-face is key to building trust and fostering open communication, which leads to staff being able to work through issues before they become contentious. Being able to go 'on-site' with partners and understand first hand the resource under review is equally important to understanding local context.	See answer to #2 above.			
1258	1257	5/22/2017	When taking leave bank leave, YOU need to change the restriction that staff can't work on EPA work. Some sick leave bank staff are able/willing to work some days for example when they are not sick themselves, but take leave bank leave to look after sick family members. A big loss of productivity, especially for small branches.	Keep rotating State people into EPA and vice versa swaps which work well to increase understanding and working relationships.	For regulated community, let them know whether 100% of PRIA money really goes into salaries as registrants keep asking where do these fee monies really go (eg general fund?).	1. Hire the best, pay them well, and get rid of the worst, but managers are weak and will never do this. 2. YOU need to rebirth the annual efficiency/productivity award contest some divisions had prior that boosted both. Awards included time-off/cash awards and other incentives. Need to really recognize these people too and communicate their productivity/efficiency boosts. 3. Stop giving big cash awards to management who rarely boost productivity.	OCSPP really needs better/more modern IT systems and PRIA fee money is supposed to pay for some of it but improvements have been very very slow coming.	TOSCA and FIFRA have many of the exact same chemistry, environmental and toxicity data requirements. Why not have same TOSCA/FIFRA staff or contractors review these studies and allow companies to borrow/compensate TOSCA studies to satisfy FIFRA study requirements and vice-versa?

1259	1258	5/22/2017	1) The process of responding to FOIAs should be improved. As it stands now, it is a fragmented, inefficient and time wasting process without SOPs. If senior leaders desire that the Agency respond to the public in a timely manner, a home office should be assigned to FOIA tasks and SOPs should be developed. 2) Approximately one year ago, I received a temporary promotion in my office. The human resource office accidentally put in paperwork to make my grade increase one grade higher than it should have been, resulting in an overpayment to my paycheck. I spent days trying to figure out what happened. I was made to feel like a criminal from the HR office. I petitioned to have the problem reviewed and one and half years later have not received a response from EPA. HR, payroll, awards issues need to be addressed promptly and accurately. Instead of receiving the pay raise I deserved, I was penalized for getting the promotion. This kind of mistreatment of employees is not			Last year, Congress passed and President Obama signed the updated Toxic Substances Control Act which revamped the powers and processes EPA has to develop risk assessments and regulations for new and existing chemicals. Scott Pruitt publically announced his support of the law at his confirmation hearing. Currently, the Risk Assessment Division of OPPT is struggling to meet the deadlines of this new law for both new and existing chemical programs. A program manager needs to be put into place for both new and existing chemical programs to improve efficiencies, put in SOPs, communication procedures, develop templates, find ways consolidate work, etc. If more employees cannot		
1260	1259	5/22/2017			1) Better Regulation Writing: We need to write better regulations that are easier to understand for states, tribes and the regulated community. Suggestions to improve regulations and make them more understandable include: limit or eliminate cross references, write out the due dates in the rule (rather than 180 days from x), write in plain language, include detailed definitions. 2) Provide More Training on New Rules: For every new rule or substantial amendment, we should provide webinar trainings Webinar trainings are easy for us to provide and easy for states, tribes and the regulated community to attend. We should also provide a plain language overview of all rules that explain the requirements in detail.	Allow employees to take leave without pay which could include some bounds (e.g. limit the number of days per pay period and total days in a year). This would save costs while maintaining environmental protection.

1263	1262	5/22/2017	I have spent 8 years of my career working with industry and as a consultant and 15+ years with EPA - experience which gives me perspective that most people at the agency do not have. At EPA, there are many more bureaucratic processes that consume time and resources than is necessary and it has only gotten worse. For example: our contract travel agency does not give us the best rates; we have two separate credit cards (one for transit and one for travel) which is duplicative and seems unnecessary; an extraordinary number of approvals is required to travel; computer equipment is old and the process for distributing new equipment is first come first served rather than need based; office assistants (analysts) look down on doing traditional secretarial work (copying, etc.) and therefore higher-paid staff has to do it themselves which wastes time. In addition, generally EPA is only allowed to backfill a position by hiring someone from within EPA or the broader federal government which results in a limited	When I work on projects that are co-regulated by EPA, Federal land management agencies, and the State we form a team that works on the project where we each have our role according the regulations. Undergoing NEPA and permitting requires project management, scientific and technical skills that not every agency has. So the agencies agree, up front, on which agency will provide a certain skill (for example EPA might supply the water quality modeler, the State might supply the geologist, the USFS would supply the biologist) then this multi-agency team concurrently moves through the NEPA and permitting process. This reduces duplication that would otherwise occur. Requiring this type of coordination, hiring individuals that are effective at coordination and project management could improve environmental results in a more	(1) EPA needs to be able to travel to participate in-person in key project-specific meetings and also at conferences that states, tribes, and the regulated community conducts. When EPA is in-person it is easier to build trust, understand others perspectives, and demonstrate that we are achieving our mission. Unfortunately EPA has cut its travel budget to save salary dollars. However, additional travel money is needed to get EPA out to these events and better connected with the public and regulated community.; (2) A common theme in my comments is that EPA needs more people that have real world experience as opposed to being life long government employees. It is often those people that have private sector experience that can better connect and communicate with the public, tribes, etc.	(1) Better personnel management. See response to questions 1 and 7. One way to reduce cost and inefficiency would be to timely discipline the poor performers instead of just waiting for them to retire. Another is to not rely on internal or even within federal government hiring to backfill positions. New people are needed at EPA with outside world experience - at all levels. One highly effective person can do more than four poor performers. (2) In addition, EPA needs to be more schedule-driven. That will enable us to complete work in a more timely manner so that we can get more done in the same time frame. (3) Remove the field offices. Some regions have field offices that are costly to		See response to Q2.

1264	1263	5/22/2017	Since the change of administrations, all outside coordination with state partners needs to be cleared with our senior communications staff. This can result in an unnecessary delays. EPA staff need to freely coordinate with their counterparts in state agencies.	The shift from paper reporting toward electronic reporting is easier, more efficient, and costs less for the facility and for regulatory agencies. Electronic systems are used in the modern era for almost every kind of transaction. For the user, these systems offer speed, convenience, expanded information choices and filing capabilities. For government, they offer the ability to increase transparency and an opportunity to improve the ability to spot pollution and compliance issues and respond quickly to emerging problems. In particular, Congress and the public expect environmental program managers at every level of government ??? local, state, tribal, territorial, and federal ??? to design and implement programs that deliver environmental and public health	EPA needs nationally consistent data to make program evaluation and subsequent planning transparent and replicable. The basis for EPA???s planning and conclusions about the status of program implementation needs to be readily available to those affected, including the regulated community, the general public, Congress, federal, state, tribal, and territorial agencies. For example, the data that EPA needs to evaluate the performance of an authorized program should be readily available to EPA (and readily available from EPA to the state, tribe, or territory) and the state, tribe, or territory should be able to easily duplicate EPA???s analyses.	The shift from paper reporting toward electronic reporting is easier, more efficient, and costs less for the facility and for regulatory agencies. Electronic systems are used in the modern era for almost every kind of transaction. For the user, these systems offer speed, convenience, expanded information choices and filing capabilities. For government, they offer the ability to increase transparency and an opportunity to improve the ability to spot pollution and compliance issues and respond quickly to emerging problems.	The shift from paper reporting toward electronic reporting is easier, more efficient, and costs less for the facility and for regulatory agencies. Electronic systems are used in the modern era for almost every kind of transaction. For the user, these systems offer speed, convenience, expanded information choices and filing capabilities. For government, they offer the ability to increase transparency and an opportunity to improve the ability to spot pollution and compliance issues and respond quickly to emerging problems.	EPA must be able to work closely with states to ensure that it has more accurate, timely, and complete information about Federal environmental program. Resources should be made available to support electronic reporting and data sharing between regulated entities, authorized programs, and EPA.
1265	1264	5/22/2017	There are so many administrative requirements that are unnecessary I don't know where to even start. I should not be required to take a training on domestic abuse or defensive driving. This has nothing to do with my employment. Domestic abuse it addressed through other regulatory Agencies/Divisions, and the RMV requires that you are sufficiently competent to drive a vehicle with a valid license. There are so many mandatory trainings that take up our limited time to focus on the what we were hired to do. I have worked so many overtime hours without pay to accommodate everyone; for so many decades. Reducing staff and budget by such an extreme and expecting us to still have time to comply with so many ridiculous requirements - without regard to who we are trying to protect - is what gives the Federal government (and "Civil Servants") a bad name. This Agency has become an embarrassment, thanks to the power's that be. There is no focus on setting reasonable standards for contaminants	Number one, making reasonable decisions with the private sector. EPA cannot seem to focus on the standards that we set for industry - it changes constantly, based on so may stakeholders. It is so frustrating for them to make sense of what they should or should not be doing. If there are no reasonable cleanup standards for hexavalent chromium, I,4-dioxane, or PFAS, how are they to rationally figure out the magnitude of their future expenditures at the Site. There are unregulated contaminants (with no toxicity factors) we are asking them to sample and track without any knowledge of what is protective or not! This Agency needs to be a cabinet position if they are to be taken seriously. The environment and people's health cannot be indiscriminately cut to balance the "budget". This is clean air, water, and basic human rights. The economy	The people that are responsible for providing customer service are nearly breaking their backs to do so, in as reasonable manner as possible. Sadly, most staff have nothing to do with the public and do not see any urgency for anything (i.e. Contracts). Focus on the people that DO have contact with the public and provide them with the support necessary. Penny wise - pound foolish once again.	REDUCE RIDICULOUS TRAINING REQUIRMENTS. If there is a course that is mandatory, than there should be a common sense reason why; and not just because some Workgroup in DC has made that decision (for lack of anything else more important to waste taxpayer's dollars on....interesting how much more they are paid to the overworked Regional staff actually struggling to make sense of their decision is the field in multiple States....). Our Regional Coordinators have no clue and are a glitch to progress. STOP overpaying them for slowing down necessary remediation.	On the technical front, there are many. The focus should be on optimizing any treatment system which is currently in place and ineffective. Provide the Regions with more solid tools to have reasonably discussions with industry regarding system efficiency and optimization before it gets to the point of them throwing up their hands and giving up. As for administrative technology, revert back to what was efficient and less time consuming. We do not need any additional electronic "improvements" to waste our time. At the base of it, the goals are more simple and streamlined and it is tiresome to have multiple new and improved computer programs that are supposed to make everyone's job more	The States are not equipped, either professionally or financially, to take on the burdens that EPA has been attempting to address. Diversification to the States sounds great on paper, but they currently cannot provide any remote form of assistance that EPA is operating under. They don't want the work and it is all too easy for a State to defer to the Federal Government when things don't go well. Without funding and infrastructure, they cannot take on this work. I've seen them bail, because they know EPA will take the fall. Honestly, in my job, if I don't do it, no one will.

	I
1264	The shift from paper reporting toward electronic reporting is easier, more efficient, and costs less for the facility and for regulatory agencies. Electronic systems are used in the modern era for almost every kind of transaction. For the user, these systems offer speed, convenience, expanded information choices and filing capabilities. For government, they offer the ability to increase transparency and an opportunity to improve the ability to spot pollution and compliance issues and respond quickly to emerging problems.
1265	Yes. EPA's regional labs are not up to snuff and cannot do the job that a private lab can. They are not entirely accountable and the cost to operate them are high. We need to rely on outside labs for any efficiency. They don't work on Saturdays, so you cannot collect samples and ship them out on a Friday. There are so many other restrictions like that....they will analyze from Cr3 but not CR6.....they claim they can take all the samples planned to be taken until the week that we are in the field and they claim that some other project bumped you, so you are left with samples with holding times that have no where to be shipped (enormous waste of money). The EPA project manager cannot

1267	1266	5/22/2017	Currently, the approval process for grant actions is left to each individual office. Some offices only have one manager approve, while others require up to five managers to approve. I have worked in both types of offices and from my viewpoint, the offices with several managers signing documents typically process these actions slower (as the Project Officer is sometimes waiting on several managers to sign which could take weeks!). Most of the time, the managers are only assigned as approvers so they are aware that the award is at the signature phase. It would improve efficiency if guidance from HQ were to come out with standardized guidance that states the required number of approvers for things the funding recommendations and commitment notices (maybe just 1-2). This way the offices who pile on the approvers would think about other ways to accomplish notifying the approvers who merely need to be "notified" of the action are not included as official approvers. As it stands now, with each	Decentralizing regional offices and "housing" EPA employees within or nearer state, tribal, and local offices would tremendously improve communication and collaboration and help employees better achieve environmental results. With most regional and HQ offices in metropolitan areas, it is often cost prohibitive for our partners to come to us and visa versa. I see the Forest Service as a Federal Agency who does this well. With their District offices, they are positioned right within or outside the Forest in which they work and within the communities that most benefit from the work they do. I grew up in such a place and went to school with their kids, had a better understanding of the role of the Forest Service (they often came to our school) because they were more visible in my community. Place-basing employees throughout the country would not improve our	EPA is not known as an agency to be very "outgoing" in nature. There are scientists and engineers that tend to be introverted by nature, but who still need to work with the public and partners. I see three issues here: 1) We're not hiring across the spectrum for talent. It may help if EPA does some hiring specifically for applicants with good people skills, 2) we need to follow our own human capital strategy and put the right people in the right positions to make sure we are working well with the public at large, and 3) we need to provide on the job mentoring and training for those who are naturally introverted and emphasize the training as relevant job skills necessary to perform our work here at EPA.			Currently, many of my colleagues feel that they must be careful about what is shared outside of the Agency. It is well known that there are legal constrictions on some information but for other information, people are just afraid to share and collaborate because they don't want to "get in trouble" for sharing something a manager didn't want them to. I believe more thought needs to go into how the Agency treats our internal processes and decision making and consider which areas we can open more to our outside partners. This could be done through workgroups or via the SharePoint environment.

1270	1269	5/22/2017	There are many administrative requirements, management procedures and other processes that can be improved. But the first step is to document these processes and then determine the best course of action - reduce duplication, optimize, remove the process etc. To have a meaningful impact instead of a dead-end bureaucratic exercise, however, there has to be executive willingness to take actions (i.e., eliminating duplicative processes, improving existing ones). Otherwise, the efforts to optimize will fail.	States have been granted authority to implement the CWA, SDWA and other statutes. Our role is oversight. We should facilitate implementation by assisting States with funding, technical support and other assistance. Some thoughts: facilitate more competent/technical staff at the State, provide a common platform to share data that is meaningful for States and EPA - too often EPA asks for too much data without much thinking on why they are asking for it from States; look for regulatory, policy and statutory changes to ease burden on States and the Private Sector while holding the excellent gains in environmental results in the United States since the 1960s and 1970s.	Ask them what their needs are and understand their issues better than we have in the past. Once their needs are known, provide the executive leadership to implement a strategy that promotes better customer service.	See answer to # 1. This is classic business process re-engineering. But what needs to be different is that there has to be executive will to take action once processes/opportunities have been identified. This is a large institution - opportunities exist in streamlining regulatory development processes, travel, human resource management, software (the previous CTO noted there are 13 different fleet management software). So the first step is identify all the processes (yes, there are processes that are not documented) - this should be undertaken at the Branch or Division level and rolled up right up to the Agency level. This will provide a detailed picture of organization operations,	See response to Question 1.	See response to Question 1.
1271	1270	5/22/2017	The largest single item in EPA's budget are the SRF programs which are berried in the organization. One of the administration's priorities is to fund our nation's infrastructure. The SRFs and related infrastructure financing groups within EPA should be consolidated into one office that reports directly to the Administrator. This would increase synergy between programs. The Administrator would have better direct control over this critical part of the agency, also he would get input from finance professionals instead of regulators.					

AMERICAN OVERSIGHT

	I
1270	See response to Question 1.
1271	

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1272	1271	5/22/2017	I think it takes too much time to have funding approved and obligated onto contracts in general. I think that we could have our contracts support staff look at more efficient processes for reviewing and approving funding for contract work assignments or task orders. This would help speed up our work in general across the agency.	I think that we should have more programs that focus on providing technical assistance to local and regional partners, to assist them with meeting existing regulatory requirements. This technical assistance would help our partners better lead their environmental programs that they're in charge of implementing. I think we could provide additional ways for local and regional partners to communicate with EPA about how EPA could support their environmental results.	I think we should increase the number of ways that our customers may access the resources that the EPA has available, including our websites and contacting EPA staff for assistance. I think that providing clear and open channels of communication are important for providing better customer service. EPA staff should increase the amount of time they interact with customers, where our customers are based or where they have environmental concerns of importance.	I think that environmental permitting should be done more online. I think that environmental monitoring should be done more online; and with open access to our partners. I think that EPA should support the adoption and development of environmental technologies that clean the environment at lower costs. I think EPA should provide more technical capacity training opportunities, to train our local and regional stakeholders how to more efficiently run their environmental protection programs.	We should support advanced monitoring technologies, that allow for us to cheaply monitor the environmental quality of water, land, and air resources. Remote monitoring technologies could help with protecting environmental resources at a lower cost to our stakeholders.	We could work more with FEMA, US Army Corps of Engineers, NOAA, HUD, and the US Forest Service on making our urban infrastructure more resilient to change climate impacts. These agencies all play in a role in making our urban water infrastructure more resilient to changing climate impacts; supporting partnerships amongst these federal agencies would be helpful.
1273	1272	5/22/2017				SEE employees - the SEE contract includes travel money to conduct jobs that federal employees do not have travel money to conduct (like inspections) Fund the primary federal program adequately to accomplish the duties as assigned

1274	implement a carbon tax.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1275	1274	5/22/2017	Each year, new administrative requirements are added for ORD employees. While each one has a reasonable basis for being introduced, the haphazard way in which they are introduced results in much more administrative overhead than should exist. This is compounded by the fact that each requirement is usually coupled with a separate IT system intended to capture the required information. This means that information must be entered in multiple systems and different times rather than carried over from one data entry step to the next. To address these problems, clearance and approval processes should be reviewed for redundancy and overlap to determine if some forms could be eliminated and others merged into a single form. In all cases, only the key information needed should be required. If a document in excess of 100 pages is required for the user to fill out the needed information, the form probably needs to be simplified. Once the minimal set of information has been determined,			Currently, we ensure that no EPA employee breaks the public trust via a vast amount of documentation for every action an employee must take. This requires a large amount of time on the part of the employee, the employee's supervisory chain, and other employees who must oversee the process. In addition, because the process is so well defined, any employee who wishes to break it can do so without much effort as we've seen over the past decade with several public examples, which served as an embarrassment to the Agency. Instead I would propose that the administrative engine that driving this paperwork avalanche be redirected to a smaller unit that instead	Rebuild the current IT infrastructure from the ground up and abandon all legacy systems. If current tools can fit into a new integrated system, they can be retained, but if the information can't be shared and/or they would require multiple copies of a piece of information to be stored or not facilitate integration of the information contain in the system with other data, they must be retired. Whether to replace the system or remove the reporting could be determined by the process outlined in the answer to Q1.	Across the federal government we could benefit from more collaborative research. The Tox21 consortium is an example of the type of collaborative research that can be done across multiple federal agencies, and there are certainly opportunities for similar collaborations with state agencies.
1276	1275	5/22/2017	The unique EPA budget constraints are inhibiting the agency's ability to do our job. Severe travel restrictions force state and other feds to speak for the agency at meetings/events/site visits that EPA is frequently unable to attend. This causes much misunderstanding and confusion in EPA policies and practices. Increase EPA travel funding, and allow movement of funds across budget categories to allow more flexibility in doing our jobs. Use in-house expertise to develop management procedures instead of forcing big ideas from short term political appointees who are only looking to take salary and bonuses from the agency. They leave with their pockets full and leave behind professional career staff to suffer through bad decisions.	More communication through travel. EPA has a history of initiating great, innovative ideas, but not being able to follow up with partners due to limitations on travel.	Give EPA travel resources so we can actually meet with our partners and the affected/interested parties. There is no substitute for face-to-face communication. It gives us better understanding of customer needs, builds trust, and allows EPA to clearly explain actions and policies.	Find another system to manage travel. CONCUR is inefficient, extremely complicated, and costs lots of staff time in managing our limited travel. Lots of time is spent by scientists and engineers to fight through CONCUR. Hot shot, short term politically appointed managers have clerical staff to do everything for them, but have no idea of the staff struggles to get routine work done.	New computers and programs are one good idea. Updated and efficient programs would be good. Ideas for change/upgrade: LOTUS NOTES. Skillport training. CONCUR travel system. PEOPLE PLUS	This general assumption of "shared responsibilities" is not always accurate. While we are all trying to improve and protect the environment, EPA oversight is critical in overcoming state politics. States are driven by making legislators happy, are bound by state laws. EPA is responsible for nationally consistent programs. We are always challenged by meeting state needs while maintaining programs that are applies consistently across all states. Delegating much more responsibilities to states will fragment programs. It will take many years to patch up programs that

1277	1276	5/22/2017	A complete overhaul of the EPAAG taking out unnecessary and burdensome policy/regulations that do not add any benefit to the agency, employees, or tax payers. Specifically, the purchase card program needs new management and a new team who are customer service/stakeholder oriented. If there is a problem with a purchase card it can take weeks to be rectified leading to lost time for the scientists to receive the items needed for their experiments. The current team also creates redundant work for the purchase card holders after they have submitted documentation into the official source, PNET. For example: ???It is the official source for our records I need to see keep a copy as I am only one person and can't continually each and every check the file especially when an IG audit/risk assessment request what we did to determine if a split purchase happened??Â Stop the mandate of PNET. Purchase card holders have to maintain paper		Being more physically involved in the communities. Sending representatives to the town halls and actually listening to what the local people want instead of allowing the people in HQ to make the decisions for them.	Mandated age of retirement. There are too many individuals who are retirement age eligible who refuse to retire. More intra/inter agency cross training. If the EPA cross training on TalentHub are mostly for HQ, then have the ability to train at other agencies in your locality (federal or state) Hire more GS-7-12s. The agency is management top heavy with approximately 70% GS 13-15. This leads to having too much management and not enough people to actually do the work required by the agency.	Electronic notebooks for scientists. Distance education training, with the advance of technology more trainings should be available online, for example Lean Six Sigma Green Belt and advanced project management.	Teaming up with NIEHS for laboratory supply procurement/warehous e storage on RTP campus.
1278	1277	5/22/2017	Preparatory question re. all of the following comments: PLEASE DEFINE WHAT YOU (EPA UPPER MANAGEMENT) BELIEVE TO BE EPA'S "CORE" ROLES. No useful or detailed conversation can occur about any of these questions unless and until you articulate this. Travel funds are chronically and woefully insufficient to carry out our planning, inspection, compliance assistance, and enforcement responsibilities. Similar for funding to present policy, technical, and scientific papers at relevant conferences and public education events. Also insufficient training funds. All policies that have the effect of blocking staff from taking advantage of various technical training opportunities, even if only due to budget insufficiencies, should be reviewed with an eye toward maintaining a technically competent staff.	EPA's role in overseeing and providing technical support to states and tribes etc. is CRITICAL. These entities not only need help to understand and meet basic federal standards, they must also be held accountable to those standards. While recognizing that nationally one size does not fit all, even basic standards concerning human health and protection of our common environment would suffer if states, tribes, etc., were not accountable nationally.	What do YOU mean by "better customer service"? Answering the phone more quickly? Then get us MORE staff, not fewer. And who is the "customer" YOU refer to? Healthy kids and a clean environment? Or letting states and tribes do whatever the heck they want to the public trust (air, land, water)? EPA can be responsive and empathetic while upholding (and where necessary enforcing) the basic environmental laws and standards that Congress has given us to administer. But someone will always be unhappy. Just who do you want us to cater to with this kind of question?	EPA has already, for years, tried to "work smarter" in virtually all of the things we do. Permit streamlining, administrative processes, etc. are in many ways improved already. Of course, more can be done but doing so requires diving into the details of and actually understanding not only the environmental laws and regulations themselves, but also other procedural requirements like FACA that affect HOW we do our work, independent of WHAT we do. Fundamentally, "internal" bureaucratic requirements (needing HQ approval for too many routine actions; organizational structures that could be flattened in order to not only empower technical staff but push better decisions out to the	To a remarkable extent, new "office" technologies are actually holding us back and costing the taxpayers much in lost productivity. For example, extra IT "security" for most staff (who do not work with confidential or classified info) is slowing everything down. People working from the field or remote offices are particularly hard-hit. The IT tools we have to work with today are simply not letting us get the job done efficiently. Next, our contracting offices are badly understaffed, creating bottlenecks that make getting projects started or grant dollars moved much slower than reasonable, let alone ideal. Finally, we more and more treat ANY information gathering as if it's	See "preparatory question" at the top: Just what do YOU think are EPA's "core responsibilities"? An example: EPA no longer owns/operates its own oceanographic vessel. So we must rely on contracting with other agencies or entities to use their vessels to carry out EPA's mandated ocean monitoring activities (such as at EPA-designated ocean disposal sites for dredged sediment, which are necessary to keep navigation-related commerce and trade moving without delays!). But that means the funding must come from contract pots, as opposed to being

There is no reason for scientists to waste time conducting market research against multiple vendors for every order if we can have one website to order supplies that has been vetted by OAM. Micro purchase limit at NIH is $7500
1278	Pool both resources and authorities across state and federal agencies where it makes sense to do so. Example: there is a state-federal agency group in San Francisco called the Dredged Material Management Office (DMMO) that oversees all dredging permit actions, to both speed up and streamline the permit process while actually achieving improved environmental outcomes. The idea is that each agency still retains its own authority, but each agency's requirements are addressed up front and all permit "clocks" start at the same time so the project proponents get their projects approved the quickest overall. "New" issues are addressed

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1279	1278	5/22/2017	Internal agency requirements and procedures for grants and contracts have become to burdensome and need to be streamlined. EPA should have a group of experienced staff simplify and speed up approval processes.	EPA staff and managers need to find ways to spend time with partners in states, tribes, local government and with the private sector -- to more fully understand their issues and priorities. This can be at conferences and workshops, or trips to visit state environmental programs.	EPA has a long history of customer service, including a generic Information Collection Request (ICR) that helps individual EPA projects collect feedback from customers that we work with. In the past, EPA has issued a customer service policy, convened training and helped EPA staff understand how to improve customer service.	citizen science is a way to involve the public in environmental protection including, for example, having the public contribute to environmental monitoring Citizen science can be a great tool to engage communities in understanding local environmental issues, and can help form the foundation for locally developed solutions.	Deployment of low-cost environmental sensors will allow EPA and its partners to better understand the spatial and temporal distribution of pollutants in air and water. EPA needs to work with States to help with the technology transition -- focusing on both science issues (performance of the new sensors) and policy issues (how to incorporate real time measurements in environmental programs).	EPA already has numerous cooperative projects with other Federal agencies and states. These could be accelerated and improved with additional EPA funding.
1280	1279	5/22/2017	Include and enhance more technical diversity in EPA workforce from industries we regulate (oil, coal, pharmaceuticals) This will eliminate one-sided view points in making environmental decisions better suited for common public good. Science used at EPA need not be one-sided. Better approaches to practical solutions will be crafted if diverse point of views are present within the Agency. Currently the time spent at the agency is rated very highly in decision making to encourage, reward, promote or retain work force. Rebalancing and retooling could be very beneficial.	Set up an exchange program between the similar environmental functions between the state and EPA. Invite, Provide and share skills and expertise available at state and local levels. Temporary dotted line reporting relationships and input to the performance reviews between EPA and State counterparts could be considered where appropriate.	Communication between non-managers between EPA and associated State Function is very limited. It will be very helpful if a list of counterparts and contacts is prepared for EPA and State Environmental Department and made available to all.	There are too many silos which cause redundancies and inefficiencies for seamless completion of tasks and projects. Responsibilities are narrowly compartmentalized. Supervisory level managers should delegate decision making to team members and/or provide clear guidance on tasks to shorten completion dates	Analytical technology has gone very far since methods used for Environmental Analysis were devised. Agency is not taking advantage of these technologies for the fear of being challenged. We should take bold step to adopt new methods of analysis as long as validity of these methods is verified.	Agency should set up an exchange programs for interested employees with other agencies like FDA, Department of Agriculture, Department of Commerce to learn, share and enhance technical know-how and expertise to enhance cost and time efficiencies. Each exchange program should result in one change idea for improvement which is measurable. measurable
1281	1280	5/22/2017	Organizational processes that prevent me from doing my job efficiently center around Administrator Pruitt's existence, and the presence of all of you Trump cronies at HQ.	Watching Pruitt and the rest of HQ Trump followers quit.	Putting democrats back in charge of EPA			
1282	1281	5/22/2017	The process to go from a well-defined project plan that needs contractor support to execute due to a lack of internal FTE to when the contractor is ready to start work on that project plan is entirely too long. This process typically takes months and results in delays and lack of productivity while technical staff are waiting for the contract to be in place. The approval process for any work that involves IT has added to the long delays and loss of staff time.

Flatten out the organization.		
1284	1283	5/22/2017	"Top-Heavy". I work in OAR/ORIA/NCRFO, the National Center for Radiation Field Operations located in Las Vegas, NV. There are 22 federal employees on staff in my organization. Out of these 22, four are managers. There is our organization's Director, his Deputy Director, and two Center Directors. Six federal employees work directly for the organization Director, and six federal employees work for each Center Director. For example, only myself and five other employees report to my direct supervisor. I believe that this extremely high ratio of managers to staff is no longer necessary and is often an impediment to performing work efficiently as an organization. The high manager to staff ratio may be an artifact from days gone by when we were a much larger organization, but I believe that it is no longer a defensible use of taxpayer money. The members of both centers in my organization have the same mission as radiological emergency response team members and have analogous roles in preparedness and		"Empower Employees". The organization I work in is extremely "top-heavy" and, as a result, is extremely management-driven. In other EPA offices, such as OLEM and ORD, I am personally aware of the fact that employees are allowed and encouraged to reach out to customers or coordinate projects that will provide help to the community where it is needed. In my organization, management has repeatedly retaliated against and admonished staff for reaching out to potential customers. Staff are neither recognized nor appreciated for bringing work to our organization, but are instead opened up to being targeted for taking any initiative. The resulting atmosphere of fear of reprisal has, in my opinion, effectively curbed staff initiative to reach out to customers.			
1285	1284	5/22/2017	It should be a lot easier to submit time and attendance each week. In addition to filling the info in PeoplePlus, we must print a copy of the leave statement (for the two-week period) and submit this to our timekeeper. Also, the agency desperately needs to have a Talent Management System in place so we can have electronic records and procedures for submitting training requests, Individual Development Plans, and electronic PARS performance plans.	Several years ago, our agency invested in sponsoring collaboration training for our employees and key stakeholders. This should be considered. In addition, with so much of our work being done in teams and workgroups, we need to highlight how groups of individuals become (or evolve into) effective teams. We have leadership guides, including the EPA Team Leader Resource Guide, that should be used and widely-distributed.	About 15 years ago, over half of the managers and staff in the agency received customer service training. There were 10 key principles of customer training. These should be used and highlighted in our daily work.	Our first-line supervisors must become more knowledgeable and more effective when it comes to managing and leading people. Many are sound technical experts, however, they lack the interpersonal skills and competencies to effectively build coalitions, trust, and rapport with their employees....much less with each other. We need to mandate the training sessions currently being offered by LER.	Not sure.	Not sure.

1283	
1284	A Commitment to Scientific Excellence". I believe that EPA has a deeply-ingrained culture of treating its scientific staff as second-class citizens. It has been my observation during my many years with the Agency that there is, in general, an elite "management" class and a scientific "worker bee" class. I do not believe that EPA will ever achieve a higher level of environmental results as long as the culture of non-scientific management persists. For example, leadership of heavily scientific units such as laboratories, or Office-level leadership of the Office of Water, Office of Air and Radiation, Office of Chemical Safety, etc. should be in the hands of well-credentialed scientists. It is
1285	Some of our LEAN work is getting at this. I believe this work should be continued and expanded.

1286	1285	5/22/2017	1. EPA Travel System -- Concur: With the availability of Internet travel sites, there is no value in maintaining an agency specific travel system that employees are required to use; Travel can almost always be arranged cheaper via other sites.	The EPA collaboration tools, predominantly Microsoft Office 365 components such as Skype and SharePoint, are configured to facilitate collaboration with EPA employees, but they are configured to make collaboration with outside stakeholders (i.e. States, Tribes, Local agencies and the private sector) more difficult or impossible. Personnel and offices with external stakeholder responsibilities should be able to configure their tools for that purpose.	Right now there are many EPA departments that are critically understaffed to provide adequate customer service to the public, while at the same time there are other departments where there is an excess of staff (because of changed priorities). It is reported by my management chain that reassignment of staff requires upper level management signoff. Suggestion: Empower managers at each level to reassign staff based on actual need and to advertise openings that could be filled internally by other EPA staff.	Eliminate most of the OEI Office of Information Technology Operations (OITO). OITO is incapable of providing cost effective IT services to the EPA, and utilizes their policy making role to prevent other EPA offices from obtaining IT services from other cost-effective sources. Specific examples: (1) EPA laptops are "rented" under the EZ-Tech contract for more than $200/month, while those same laptops can be purchased for less than $700 (with the same hardware and software). (2) Storage cost at EPA National Computer Center: $25,000/terabyte/year. Open Market purchase price: $100 (one time cost). Note: The NCC configured storage has 1/2 the performance of correctly	1) Continue push for Lean government. It can reduce costs of operations significantly. 2) Require Lean principles to be applied to EPA security policy. OEI violates NIST recommendations by requiring the same security controls on low risk systems, that add no value, even though NIST 800.53 directs otherwise. 3) Allow Cloud based IT solutions to be implemented and deployed. OMB and GSA have documented the cost savings of this approach. However, OEI, by their policy making role, is ensuring that EPA cloud implementation has as its first priority the preservation of OEI's revenue stream; i.e. they are not allowed to be more cost effective.	Eliminate most of the OEI provided and managed IT infrastructure. FISMA and FEdRamp compliant resources are available through government wide acquisition vehicles much more cost effectively than EPA OEI will allow for internal vehicles.
1287	1286	5/22/2017	Hi. I can't say that there have been administrative requirements, management procedures or other processes that have prevented me from doing my job. I have worked for the EPA for about a year and a half now. I''ve made great strides in understanding the Agency, but the more I learn the more I understand how complex the issues are and how difficult it is to manage them effectively.	I work for the Superfund program, and can speak only from that perspective. From what I've seen so far, the Superfund program works very hard to coordinate with states, tribes, communities and the private sector. From what I see, it is extremely difficult to make all parties happy. The public may have unreasonable expectations, for example, that ALL contaminants be removed from groundwater, when that is not technically feasible. On the other side, "Responsible parties" will rarely, if ever, be happy with having to pay for mistakes made, especially when those mistakes were made many decades ago. This would be very difficult with the hiring freeze, and plans for massive layoffs, but hiring people with good human relations and negotiating skills would be helpful in minimizing conflicts among stakeholders. "Us vs. Them"	From what I've seen so far the Superfund program works very well with states, tribes, local communities and the public. The regulated community may be another story. I don't know how to make things easier for potentially responsible parties. I imagine it would be horrifying to be accused of poisoning a community. And that it would be natural to react defensively. Maybe more respect, and compassion for their positions, while maintaining firm enforcement of environmental regulations would help.	From what I've seen so far, there is probably a bit too much reliance on contractors. I understand contractors were originally brought in to save money, but I think the incentive to drag things out, and bill as much as possible, is too great.	I think the high throughput testing of chemicals is very important. It would allow us to evaluate toxicity rapidly, which would save the taxpayer and the regulated community a lot of time and money. Examples are the endocrine disruptor screening program and Tox21. These high throughput testing methods also reduce the amount of animal testing done, which could be a PR win for the administration.	At Superfund we coordinate with NIH through the NIEHS-Superfund Research program. This collaboration helps the Superfund program get answers to questions about human health and exposure to environmental contaminants. Greater understanding of problems means that we can reduce uncertainties around risk assessments, which would help protect human health more efficiently, save money, time etc. I'd suggest more such partnerships.

AMERICAN OVERSIGHT

	I
1286	Recognize that no one fad within the IT community is a silver bullet that will solve all IT problems. Combine traditional IT technologies, such as CMMI (which focuses on process improvement) with LEAN (for eliminating waste) with Agile-like incremental approaches (which focuses on eliminating analysis paralysis).
1287	I think the practice of rotating employees around to different divisions and regions is an excellent one. I think it helps develop a greater understanding of what is going on with the agency, communities, states, and businesses, and prevents people from getting entrenched in a particular mindset.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1288	1287	5/22/2017			We need to be more open and transparent about our work and the benefits it has on the public. We need to have better outreach with our communities so they understand the ways we are working for them.		More electronic concurrences rather than paper. We are currently not allowed to use doodle, however, it would be very helpful for scheduling meetings.	This is a leading question. To some extent, realigning activities can increase efficiency, however, there can be negative consequences. Having different agencies sharing responsibility on a particular subject area can be important in order to provide a more well-rounded viewpoint rather than a single agency's perspective.
1289	1288	5/22/2017				The radiation work of EPA is relatively small (regulatory rule implementation/enforcement, being ready for a radiation emergency), but it is extremely important. Right now, HQ advises each region to have a radiation person (health physicist) on staff. However, it is probably smarter to have all the radiation folks in one place and have them oversee the work of the country. A small cadre could be deployed during a radiation emergency to each of the effected offices. They could conduct all the inspections for the country. They could review and comment on all the reports with a radiation effect, etc. EPA should seriously consider an Center of Excellence model for this	Using tablets in field work that have been customized for the type of field work being done. We could have the GIS data from the location of the environmental sampling, conditions when sampling occurred. Smartphones for all supervisors, especially those who are often in the field, on travel. Using Slack (slack.com) or something similar to create a "channel for a project, a topic, a team or anything - everyone has a transparent view of all that's going on." This would help EPA stay up-to-date across the country for all work and best practices.	For radiation, we should consider what would happen if there were an emergency (such as a radioactive bomb). How would all the feds interact? What role would EPA play?

1290	1289	5/22/2017	The External Affairs offices are a waste of time and money. It adds a slow layer to the bureaucracy. Often, the XA employees are clueless about technical issues and get things wrong. If you are going to do press releases, you need to have people who understand technical issues. There is too much emphasis on public relations perceptions instead of science. There are too many contractors doing EPA jobs. They cost more than govt employees and provide less competent service.	We need honesty and science. We do not need to cave in to private sector (i.e., business & industry) interests. Why does someone's horrible coal mining job outweigh my right to a good quality of life with clean air and water? Why does Devon get to contaminate the planet? I don't have children so it won't be my problem for long.... do you have kids or grandkids?	I've been to dozens and dozens and dozens of public meetings. Some of our "customers" are just too stupid to understand the technical aspects of environmental issues. You can only dumb it down so much. We should not cave in to State's interests. We need consistent policy across the country. Some of our Regional managers are given too much leeway to set their own rules.	Substantially DECREASE the number of supervisors, managers, and SES employees. Slash the number of GS-14, 15, and SES. We have far too many bosses and bureaucrats. This is a scientific & technical agency, we should primarily have engineers and scientists. If you have to cut employees, keep all Regional offices because they are closest to our customers. Reduce the number of employees (especially 14, 15, SES) at EPA Headquarters in DC. Also, do we really need all these satellite offices and labs? Also, get rid of the dead wood managers! We have quite a few people who were kinda-sorta demoted	Increase number of telework days from a max of 2 days per week to potential for full time telework. The technology is there and many studies have shown that responsible people get more work done when they are happy and well-rested.	COOP. EPA R6 leases a very large office/storage building for COOP. It has warehouse space for Superfund but also a giant training center and several conference rooms. It's a ridiculous waste of taxpayer dollars. It's about 12 miles from the downtown Dallas office and nowhere near any public transportation. R6 pays people to have transit passes, but then holds mandatory training and stakeholder meetings at the COOP - everybody has to drive, so they can't use those taxpayer subsidized transit passes if they go to the COOP. Why not coordinate COOP with other Federal
1291	1290	5/22/2017	Like many governmental agencies, EPA's programs are siloed. Working solely within our silos makes us less responsive to communities and often creates more hurdles for communities to overcome to take advantage of our expertise and financial resources. In addition, we are far less effective in getting returns on our investments when they are made in an uninformed vacuum.	Over the last decade, EPA has made great strides in taking a community-driven approach to environmental protection. We now have experience of breaking down our traditional EPA program silos to deliver creative services and streamline existing resources to meet locally-identified goals. We must not waste this wealth of knowledge and experience. EPA should increase its commitment to community-driven work to become an even better partner with communities and further maximize the resources of the entire agency to advance local environmental goals.	The Administrator should launch an EPA Community-driven Environmental Solutions Initiative, which embraces cooperative federalism, supports local solutions, and improves efficiency and efficacy of EPA assistance to communities. The Office of Policy should lead this initiative, building upon the lessons learned from the previous Administration's community-based efforts.	An EPA community-driven approach to environmental protection will better use resources and expertise from across the Agency and a range of outside partners. We can work side-by-side with state and local partners to connect them to reources, information, and technical expertise. This approach also allows us to be extremely strategic and coordinated with our existing resources (grants, contracts, in-house expertise) in order to maximize our investments. We can also be very targeted with technical assistance to especially distressed communities to fill critical knowledge gaps, build capacity, inform policy, and catalyze projects.	A community-driven approach is a change in how government serves communities. It requires changes in both culture and day-to-day business practices. EPA has started the process of making this approach our modus operandi; however, pivoting to this new approach to serviing communities can only be fully realized through repetition and strong leadership. The tools and "infrastructure" are in place to more effectively work across our programs and make more strategic and informed decisions about how we invest Agency resources in communities. We now need the leadership to execute it more aggressively across the Agency.	In the more than 50 EPA "focus communities," we have a track record of aligning our resources to address locally-led needs and develop creative solutions. We have not placed the burden on communities to try to figure out how to match our rigid program requirements to their unique needs, which is how EPA traditionally operates. In many of these focus communities, we have collaborated with states and other federal agencies. For example, we sought to leverage significant investments already made by other agencies, such as DOT and HUD. Often, we were able to provide technical assistance to

AMERICAN OVERSIGHT

	I
1290	All govt jobs should pay people appropriately. EPA is a technical agency and engineers & scientists should be paid comparable to the private sector (we are NOT). Stop with the ridiculous "diversity" hiring. In my 20+ years here, diversity is nothing more than quotas. STOP threatening to screw with our retirement benefits.
1291	Office of Policy has already led a 2+ year effort to strategically focus EPA resources in more than 50 communities. Case studies, lessons learned, and best practices exist from this work that illustrate a more effective and smarter use of EPA people and funding. In addition, OMB has a wealth of information on how federal agencies have effectively collaborated over the last decade to break down silos, and as a result, get a higher rate of return on federal investments.

1292	1291	5/22/2017	The EPA acquisition system (EAS) and IGMS funding are cumbersome processes.	Identify what SLTT needs are by listening rather than Feds telling them what they need. Start with small goals/objectives that are manageable and show quick successes. SLTT want clean air and clean water for their areas and may have the Traditional Knowledge to accomplish better than remotely located Feds.	Approach SLTT as a coordinated Federal environmental entity (EPA, DOI, DHS-Coast Guard, NIEHS, ATSDR, etc.) rather each Agency putting individual demands on them... Regulated community - find middle ground - Businesses must be able to make a profit but not at the expense of environmental degradation for the next generation. Make it personal - Businesses are responsible for economic prosperity as well as conducting in an environmental sustainable manner - this is their legacy to their children and grandchildren, Public - create a "culture of responsibility" for environmental stewardship. Everyone is accountable for environmental protection.	Rethink integration and/or consolidation of Federal environmental Agencies and programs.... EPA, DOI, NOAA, US Coast Guard, Army Corps of Engineers, NIEHS, FEMA.. Administrator Reilly under the Bush Administration championed this idea, but I am unsure of the obstacles this proposition.		I favor the advancement of scientific principles for environmental protection and environmental response for the nation more than the politics and stove-piping of territorial silos. In the words of Albert Einstein, " We can't solve problems by using the same kind of thinking we used when we created them." EPA started in 1972 in response to pollution, smog, rivers on fire... There are many ways to streamline either through collaboration, integration or consolidation with other environmental Agencies. Administrator Reilly under the Bush Administration
1293	1292	5/22/2017	1. Grant submission and documentation requirements. I work with tribal GAP grants as a Project Officer . Our grant program requires the use of GAP Online for quarterly reporting from tribal GAP grantees. That system is challenging for many grantees to use and creates added work for us as Project Officers in that workplans and budgets have to be entered and approved in GAP Online often after they are already approved. It creates an additional step for grantees to enter the workplans (if they did not initially use the system for workplan creation) and for us to review and approve them in the system. Even though the system provides a mechanism to track progress and store deliverables it creates an administrative burdens for us, as I've mentioned in entering and accepting the workplans in the system but also in submission of quarterly progress reports in the system. We do not have time to click and approve every commitment's report for each quarter and thus have come to just viewing reports as a PDF because the	We are achieving significant environmental results with states, tribes and local governments. Use success stories written by states, tribes, local governments to demonstrate these results. Creating performance measures and then assessing metrics against performance measures is time consuming and doesn't necessarily show value unless a cost/benefit analysis done on a project funded through a contract or cooperative agreement and only if they are outlined in advance of the project and more importantly don't demonstrate value to the state/tribe/locals. This is where it would be best to leave it to the state/tribe/local to tell the story. And/or set aside time/staff allocations for each Region's Public Affairs team to work with state/tribal/local to tell the story. With those stories use social media, newsletters as well as outreach to the press to	Create efficiencies, reduce paperwork and redundancies, and hire more staff! Where we are limited, bring on more interns, SEE, contractors and Inter Agency loans. We are grossly understaffed given the workload we are tasked with completing. I have worked for the Agency since 2005. In the time that I've worked here I've seen a marked increase in administrative tasks, paperwork, justification of the work I do versus actually doing the work. Some of this is due to GPRA and negative reviews of my program with the IG. The way the HQ program responded to the negative finding from IG were incredibly inefficient and created that 3 items I highlighted in Question 1. Place higher value on the public health behavior changes and environmental improvements made as a result of technical assistance and highlight those efforts.	Spend time with staff that do the "boots on the ground work" to see the value in the work we are doing with the public and with state and local governments and place a higher value on that work vs. all the "administrivia". For example, the relationships we build with tribes in providing technical assistance is of high value in making changes in communities in public health and environment vs. negotiating a workplan and dotting all the i's and crossing the t's. (see above comments).	I think it would be helpful for staff doing any external communications work to have smartphones. In this region only very few have these. If purchased or contract with local telecommunications provider it would be easier for us to communicate when in the field and share information with public.	Have more time available and dedicated to collaborations and developing partnerships not just with the Agencies but at the individual staff level where those relationships are built.

AMERICAN OVERSIGHT

	I
1292	Good to Great.... Be the best! Get back to the basics of Clean Air and Clean Water. Do these two responsibilities well, and we will have a much better environmental future.
1293	For Project Officers in Region 10 we've developed a template for creating Funding Recommendations and Commitment Notices in the IGMS system which has saved us an enormous amount of time. We also use a checklist when reviewing noncompetitive grant proposals that also includes current grant performance. This has also saved a significant amount of time.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1294	1293	5/22/2017	Certain required trainings seem wasteful, i.e. active shooter avoidance training. Timesheet procedures related to requesting and accounting for credit hours are excessive (constant reconciliation between excel sheet and PeoplePlus) - I think the excel tracking sheet is redundant.	EPA usually provides 2 key roles: facilitator amongst these entities to focus on integrated watershed perspective, and by providing accurate technical recommendations. These roles directly translate into better environmental results. We need to increase our support of these roles by increasing staff capacity and technical training.	Increasing staff capacity by spreading out the workload will yield staff that can be more responsive, efficient, effective and accountable to the decisions they are making.	Upper management (past 1st and 2nd line managers) at EPA seems top-heavy and redundant. Too much political machinations at the top that prevent critical information from reaching the public.	DARTER needs more refinement and modules to be effective. PeoplePlus could use modernizing, especially so staff can see rapid and accurate leave accounting. The IT at EPA is woefully out of date as compared to private sector. For instance, we have no large electronic data storage capacity for either current or archived files; we deal with huge files. Our HR on-boarding process is slow and illogical - we loose good candidates to the private sector because it can take up to 6months to hire from advertising.	
1295	1294	5/22/2017	I have generally found that EPA's administrative requirements, procedures, and processes are designed to promote internal accountability, accommodate stakeholder input, and allow for more detail-oriented oversight of agency decisions and actions.	Presence is key to achieving better environmental results. In arenas where states and delegated authorities may not have the capacity, or may have other restrictions limiting ability to maintain a strong presence amongst the regulated community, EPA should be well equipped (with trained personal and allocable resources) to provide technical assistance to implementing agencies or to take on the burden of complicated national regulatory issues.	To provide high-level customer service to our stakeholders, EPA should make every effort to properly train staff who are liaisons with the public, our state/tribal/local partners, etc. This should include maximizing opportunities to interface with the public and our partners, including conferences, site visits to the regulated community, and travel budgets that accommodate face-to-face meetings with fellow implementing agencies. Oftentimes, EPA's stakeholders engage with us on issues that personally affect them - whether from a human health, economic, or community-oriented perspective. Having trained staff who are responsive and can respond personally makes a big difference in hearing the messages our stakeholders are sharing and providing accurate information in turn.	There is no doubt in my mind that EPA senior management is constantly looking into ways to reduce costs without impacting our ability to protect human health and the environment. But, considering that about half of all of the funds budgeted to EPA go straight out the door as grants or loans, there is definitely a risk that cutting costs will decrease oversight, or deprioritize issues that have the potential to cause real damage. As such, any "untapped opportunities," if they have not been previously explored, should probably be pursued with discretion and care.	Many of our state and local counterparts have experienced success by utilizing mobile technology, for example tablets or mobile phones, to be able to bring data systems into the field. This can help compliance assistance and technical experts engage with the regulated community more efficiently, while promoting accuracy of the data used to make decisions every day. Maintaining up-to-date data systems, and being able to access them remotely, could go a long way toward "modernizing" the agency.	In general, ensuring that EPA's activities are aligned with our statutory authorities promotes clearest delineation between EPA's roles and responsibilities, and those of our federal and state partners. For example, state laws may group certain environmental programs in a way that does not align with EPA. However, in order for EPA to work most effectively with all of our state, tribal, and local partners, it would be more prudent for EPA to base its activities and structure off of the responsibilities deemed by Congress, rather than trying to adapt to all states, etc. In addition,

AMERICAN OVERSIGHT

	I
1294	IT and data management systems. Well-thought out succession planning - early retirement of highly critical, technical staff will handicap our programs.
1295	Some of our state counterparts have begun developing and deploying succession plans to be able to maintain institutional knowledge, provide exceptional customer service, and ensure that critical functions are able to be backfilled expeditiously. Having detailed strategies for succession planning can help reduce efficiency by jumping the learning curve for newer employees, while also promoting review of agency and stakeholder needs to identify key areas of knowledge or service and preemptively train staff to meet those needs. In addition, being able to higher younger, more experienced staff is one of the easiest ways to reduce costs, but the tradeoff of relying on that mechanism

1296	1295	5/22/2017				IT contributes to a lot of inefficiencies. Systems are sometimes down, we have old equipment and programs. Remote access often has trouble connecting. Some additional investment in fixing some IT problems may help the rest of us increase our efficiency.	IT contributes to a lot of inefficiencies. Systems are sometimes down, we have old equipment and programs. Remote access often has trouble connecting. Some additional investment in fixing some IT problems may help the rest of us increase our efficiency.	
1297	1296	5/22/2017	we address these through regular meetings with my supervisor, who consistently requests such feedback	we can always improve, but we already work towards consistent improvement	ensure that we have sufficient resources and priority, including adequate time, to provide better customer service	we consistently strive to reduce costs and inefficiencies while maintaining environmental protection. untapped opportunities are largest where we have insufficient resources and misaligned priorities.	yes, we already consistently look for such opportunities in applying modern technologies such as infra-red or other "NextGen" processes. Cost and time to do these properly are obstacles.	continue to work towards improved communications; time and resources are obstacles currently.
1298	1297	5/22/2017	Many administrative approvals still require wet ink signatures (as opposed to digital signatures or other approval). One example is the form authorizing the use of a government car for home-to-work travel (when departing on field work very early, or returning very late). With increased use of telework (a good thing for employees and the agency), wet signatures are increasingly ineffective and unnecessary.	Increased usage of Interagency Personnel Agreements to place Federal Employees in state offices, so they can learn more about the realities and challenges of our counterparts, while also providing them with additional resources to accomplish our shared mission.	Increased travel funding at the Regional level, particularly in Regions with a large geographical footprint. Many of our interactions with our states and the regulated community require (or are greatly enhanced by) in-person, face-to-face interaction.	The agency is structured so that the career path with the highest ceiling lies in management. If the agency is truly a science-based organization, it should provide more opportunities for scientists to advance their career. This will help attract and retain more talent, thereby making the agency more effective in its core missions.	1) Digital signatures. Wet signatures still exist for some internal administrative approvals. This seems unnecessary and old fashioned. 2) Access to email via mobile devices, perhaps through fingerprint authentication. When in the field, it is unreasonable to expect an employee to remain accessible via email when accessing email requires finding an internet connection, booting up a laptop, and two-factor authentication onto a VPN.	I think we generally do a pretty good job of this already. The budget we are given requires it.

AMERICAN OVERSIGHT

	I
1296	Transparency. Over the last couple years, our organization has really worked hard to improve its transparency, and it has had a tremendously positive effect on the workforce. Even if staff don't agree with decisions, they at least can understand how and why they were made. This has helped reduced anxiety and created a collaborative and open working environment. Hire and retain smart people. Incentivize high performers. work with lower performers to improve performance. perhaps better training for managers will help with this.
1297	agency-issued cell phones and field tablets could do all of that, but require an initial capital investment.
1298

	I
1299	
1300	1) Communicate priorities with staff. @EPAScottPruit: "Today I shared my vision for how EPA & the electric power industry should work together to achieve energy independence with industry CEOs." As a staff member, I would be very interested to hear these ideas, but they have not been shared with me. 2) Empower staff to make decisions by delegation of authority. It seems many decisions after the transition have been delayed due to decisions that are no longer made at the Regional level (or lower). This is even true of areas that have been identified as a priority, such as Superfund.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1301	1300	5/22/2017	Remove requirements for grant project officers to maintain paper files, and allow them store related documents electronically. This would reduce cost, paper consumption/waste and staff time associated with grant project administration and oversight.	1) Provide sufficient funding and staff for EPA to support its state, tribal, local community, and private sector partners in our mutual pursuit of environmental and public health protection. Refrain from further threats of reduced EPA budgets and staffing so that our external partners have confidence and certainty regarding the capacity of EPA to support them in their work. 2) Cease making arbitrary, rigid determinations regarding EPA staff travel authorizations for meetings with external partners. Allow EPA offices to define ???local travel??Â based on the operational needs and realities of each office and its relevant, external partners.	1) Provide sufficient travel funding for EPA personnel to engage in-person with external partners as needed, and direct managers to encourage such activities by program staff. 2) Allow relevant program managers and staff to compose agency content for media/public consumption. Refrain from distorting/manipulating EPA???s public messaging to reflect a political agenda that places polluter profits ahead of environmental and public health protection.	No comment at this time.	Provide EPA staff access to agency email via personal mobile devices (i.e., iPhone and Android devices). To comply with federal record requirements, ensure that no agency communications are stored on personal devices, but rather, allow these devices to access and utilize agency email so as to increase staff productivity and functional capacity while mobile.	Seek to align vehicle technology research and development priorities and resources across relevant EPA, DOE, DOT and DOD offices to maximize the impact of federal contracts and funding assistance in accelerating the deployment low emission, high efficiency vehicle technologies nationwide. Emphasis should be placed on projects that support deployment of zero tailpipe emission technologies (i.e., plug-in hybrid, battery-electric and fuel cell electric vehicles) and related fueling infrastructure development (i.e., electric vehicle charging and hydrogen fueling).
1302	1301	5/22/2017		Expand our programs that promote and provide resource conservation. Programs like EnergyStar and WaterSense should be reenergized and expanded. Augment the principles behind these programs by partnering with labels such as GreenSeal and organizations such as LEED. Keep promoting the use of renewable energy sources and innovative solutions that will benefit infrastructure. We can promote the use of solar panels and talk with energy providers to use batteries to store excess energy produced. This solution is specially useful in remote locations were the installation and repair of infrastructure is costly. It will make more sense in places like Puerto Rico, Hawaii, the US Virgin Islands, Colorado, California, Florida, most of the south and center of US.	All of the necessary documents should be publicly available. Train people to change from the default "all documents are private unless a request is made for them" to "all documents are public unless the companies claim, and we grant, CBI protection".	We have need of personnel. Without these positions work is left undone creating an inefficient use of resources and increasing possible exposure to unsafe environmental issues to the public.	Broader use of open source software. Non regular users of GIS can have QGIS on their desktops. When installed, a custom script can be run to add agency resources to locate data. It will let users that just want to create a simple location map access to EPA GIS resources at a fraction of the cost. The same can be said about office productivity suits like LibreOffice or even Goggle suite of MS Office-like software. PDF software that enables merging of pdf documents created from multiple sources can be found on pdfforge.org. Instead of creating a custom solution for EPAtv, we can use the live feature of the current EPA YouTube page. Past events are already stored in the YouTube page. We lose CNN live streaming	EPA is a science agency. Research should be expanded in a cooperative agreement, with EPA as the lead, with those partnering agencies that can provide support. We can also bring some of those partners in kind of a yearlong internship so that they know the science, policy and regulations behind the collaboration. At the end of the internship, those individuals will be better able to perform and promote those shared functions.

1303	1302	5/22/2017	N/A	Allowing more flexibility with the funds and partner with the States top priorities.	Establishing points of contact and accountability.	N/A	Each region cross regions with needs, such as microbiology or radioactive expertise.	Providing opportunities between similar contracts in the other regions to feed off of areas of expertise. As well as, help out other regions with projects that require a specific expertise or more hands.
1304	1303	5/22/2017				Yes. I think that many of the Superfund programs in OLEM could be consolidated to increase efficiency. Consolidating OEM, OSRTI, and FFRO under one Director in OLEM would help the Agency's streamlining efforts. Consolidation would reduce management layers; reduce administrative support; reduce redundancies in decision-making and support functions reduce internal reviews; and be more cost efficient by enabling the Agency to more easily move money to address major responses that suddenly arise. For example, almost 20 years ago, when the removal and remedial programs reported to one Director in what is now OLEM, a major health threat arose as a result of the

	I
1303	Best Practice: The SESD Region 4 Laboratory draws its strength and best practices from the outstanding staff. The staff at this location make it a point to collaborate and deliver high quality work products.
1304	A best practice. I think EPA should encourage all states to develop Voluntary Cleanup Programs (VCPs) similar to the program in Texas. Willing and able private parties pay a fee to the state to cover application and oversight costs. Developers, good Samaritans, and potentially responsible parties can all participate in the program as long as they are able and willing to conduct a cleanup. VCPs maximize the number of sites that are cleaned up. The downside of VCPs is that they do increase the number of fund lead removal and remedial Superfund sites because only those sites where there are no viable PRPs, the PRPs are litigious, or the site is extremely complex are referred to

AMERICAN OVERSIGHT

1305	1304	5/22/2017	The current system for processing HR actions is quite difficult to use and is not nearly as up to date or user friendly as other automated tools the Agency uses to get the job done. Hours are wasted processing requests through the system often requiring input from multiple people. It is very inefficient to have so many systems to enter different information - maybe some integration of systems with one point of entry where most actions can take place even if they feed the other systems..	We could achieve better environmental results by further opening the lines of communication and trying to identify actions that will support each of these partners get the job done better. maybe a few more national forums if travel budgets allow where people can come together to share ideas and plan joint ventures.	One key idea would be to provide more interactive tools that can be used by these communities to make informed environmental decisions. Often, all the customers listed do not know we have certain tools or how to get to the ones we do have. There most be easier portals to get the information and examples provided of how to use the information and tools. I think more interactions are needed between the regulated community and the Agency on technologies to manage and measure pollutants to meet the mutual needs of both organizations would be very advantageous.	I think there should be a better way to bundle regulatory development and implementation actions so we can provide an industry a picture of what needs to be done and what may be required as we move forward. Next we should provide integrated tools that provide them with a picture of the environmental and economic impact of different response actions. The goal would be to move towards a partnership approach. Maybe the Agency could look at everything from a sector rather than media specific approach.	Clearly we need to modernize our administrative systems and make it easier to get information and enter information through a common portal. There has to be an openness to new ideas and the flexibility to try new technologies. We need to have a system that awards the high performers and puts those not performing on a path to perform more effectively. More management training would be helpful here.	I think it is more about cooperative ventures than realigning shared responsibilities. While some realignments could occur, it is more about sharing information and working together on the problems of greatest importance. Often the development of regulations drives the research agenda, Whereas more could be done on the back end to come up with cooperative ideas that will meet state goals while also enhancing our collaborations with our colleagues across the federal government. A focused group on cooperative ventures would be helpful.
1306	1305	5/22/2017	-People Plus is a hugely inefficient system that takes much more time than it needs and doesn't accomplish what it should be accomplishing. In theory, I should request leave PRIOR to taking it, but if I do that, the date/time purpose are set in stone, and	REWARD THE STATES WHOSE ENVIRONMENTAL INDICATORS ARE ACTUALLY SHOWING IMPROVEMENTS. Reward environmental achievement. DO NOT roll back environmental laws. That is just ass-backwards. It makes no sense. It's going to end up with us wasting our resources defending ourselves in court against patently indefensible acts. Example: don't mess with the WOTUS Rule. That was MANY years in the making. We received and addressed many public comments. We addressed them. Listen to the ideas that the states come up with, and SPECIFICALLY FOR STATES THAT HAVE EFFECTIVE PROGRAMS OR STANDARDS THAT ARE MORE PROTECTIVE THAN FEDERAL STANDARDS, give them opportunities to figure out the best ways to improve standards. Let's not waste time on meaningless initiatives that	-Fix the broken links in our websites. Improve our search mechanisms so that we don't end up pulling up three of the same document, only to find out that two of them are out of date. -REINSTATE ALL THE CLIMATE CHANGE, CIVIL RIGHTS, AND LGBTQ DATA AND PAG	YES. Please give the administrator a little science background. PLEASE. He's looking like an idiot to anyone with a modicum of education. Denying climate change is not intelligent, and it is not a good way to lead an organization of environmental professionals and environmental scientists. We really aren't that stupid. DON'T roll back the Clean Power Plan. That is one of the most intelligent attempts to address this very difficult problem. -Make more use of innovative programs. Use the Prizes and Challenges options. Partner with other fed and state agencies and even business partners. MAKE SURE THAT YOU SUPPORT INITIATIVES IN THE REGIONS -PROMOTE MORE SHARING	Better timekeeping systems. Less onerous travel systems. THey shouldn't take THAT much time for us to figure out. Also, I've been here a long time; I still don't understand why we keep changing the systems every 2-3 yrs. Then we are obligated to go through the trainings again, only to have to relearn them all over again (sometimes when we haven't even traveled in the interim). Consider more use of challenges & prizes to discover better technologies. Don't roll back environmental protections; businesses are expanding by building better monitoring devices, and there are some good wastewater treatment technologies out there that we should be promoting--and we should encourage/promote more	Consider database management programs and data that can be shared. Particularly for larger states that are effective in implementing their obligations. WE SHOULD ABSOLUTELY BE PARTNERING MORE WITH OTHER FEDERAL AGENCIES, some of which are doing the same things we are doing, or similar things. Some are collecting data that we could use, and vice versa. I honestly don't trust this administration to do this the right way (so far, they seem intent on simply removing protections, and that makes no sense). -We should share

AMERICAN OVERSIGHT

	I
1305	We should focus more on placing large goals out there for Agency Offices to gather around and identify how they can contribute to meeting them. While we write strategic plans, we do not focus on the integrated implementation plans to make the goals a reality. I think other agencies use statements of need to drive research and policy actions - maybe this is an approach that could be used more at EPA. Finally, often we have too many cooks in the kitchen trying to work on the same thing. We could get more done much more efficiently if roles were clear and there was more accountability on getting the job done.
1306	YES. Encourage all federal employees to bike, walk, carpool, or take public transit. DON'T CUT BIKE LOCKS AT HQ. On Bike to Work Day and Bike to Work Week, no less! Really, please make it easier for us to take you seriously. EPA staff has functioned well in republican and democratic administrations. I don't even know what you can call this administration, other than anti-environmental bullies. If you don't like the bikes on the benches, BUILD SOME BIKE RACKS ALREADY!. Do something right, PLEASE. REMEMBER THAT ENVIRONMENTAL REGULATIONS LEVEL THE PLAYING FIELD FOR ALL. They are not a "burden" unless you are relaxing those standards in one

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1307	1306	5/22/2017	None	EPA should consider holding an annual conference and ongoing television program, that engages participation and attendance from the state, tribes, local communities and the regulated community to talk about program goals, environmental milestones , problems, next fiscal goals, and accentuate ideas on how to work together. In addition, the agency might consider posting a Report Card online the permit compliance status of all regulated facilities, per program.	Update EPA directories with key responsibilities for each employee to help the public decide who they need to contact about an environmental concern. Increase public awareness how to access this directory.		EPA should study and consider allowing employees to work from home 4 to 5 days a week using virtual reality technology; and reporting to the office once a month . Many professional/experienced EPA employees are over age 50 and eligible to retire, but continue working even with health challenges, because the economy is unpredictable. These employees may need special accessories such as wheel chair ramps, spacious workstations, restroom handlebars, etc., to accommodate them. EPA could save millions of dollars in reduced overhead for leasing office space and utilities; eliminating the purchase of special access doors and equipment;	
1308	1307	5/22/2017	Fix the trainings. They are so unclear. eg. current IGMS training (which says, of course, that' I've already finished it, but based on past years, I probably need to do this again anyway.) And it tells us to "log out of Lotus Notes." haha.	Give up on gutting EPA. Please. Please have the administration get some education on the use of confidential business information or controlled unclassified information. These data are necessary for us to have an accurate picture of what we're analyzing. If you don't like it, you can always have an internal, independent office review the data to make sure we're not trying to mess with the data -- and keep in mind, this has not really happened in the past. You can't dismiss data just because some business doesn't want their own data to reveal the truth, or because some industry rep wants to undermine the analysis. -Reinstate the Sciencd Advisory Board. Installing Industry Reps to pose as "independent" scientists in place of actual independent scientists is completely bogus. And it's not even subtle. ENSURE ACCURACY AND INDEPENDENCE.

	A	B	C	D	E	F	G	H
1309	1308	5/22/2017	Concur works well when/if a traveler is actually allowed to use it to find flights and hotels (like in R4) but it terribly time consuming and frustrating to use when the traveler is only allowed to fill in a form and an admin person makes the reservations in Concur (R10). I am regularly unable to get the flight times I want which is normal. The problem is that I'm not allowed to see what Concur offers as a replacement. Instead the admin person either books the flight as the form had indicated but at a price far above the contract price OR on books different flights that are unacceptable (arriving at a hotel at 1am for example or with unacceptable transfers such as flying from Seattle to Washington DC via a several hour layover in Los Angeles). It can be incredibly time consuming and/or expensive as one must ask the admin to change the ticket, especially when the admin prefers to call the travel agent rather than using the cheaper online option. Concur was designed for the traveler to pick his/her own flights and hotel based on the choices it	Have relationship building and partnering for results be something that is evaluated in PARS. PARS mostly tracks tasks within EPA such as processing grants, reports, briefings, issuing policy, etc. PARS does not give "credit" for working with external partners to achieve environmental results. EPA can gain far more environmental benefits through working with external parties, we do not need to do it alone. The best systems seem to use incentives (carrots) to entice behavior change but have enforcement options (sticks) that hang out in the background for truly egregious actors.	Have this be evaluated in PARS, equal in weight to issuing reports and completing grant actions, etc. I have asked many times to have this added but have been told that we do not evaluate the time spent responding to the public, States, citizen groups, university students, etc. I have frequently been told to just send them to an EPA website if possible, and to spend as little time responding to these inquiries as possible since I am needed to do other tasks. Either do not put out names, email address, and phone numbers on EPA websites or provide a PARS element to capture this task for those of us who are sent questions and requests not les than weekly.	Stop changing software so rapidly and do not push new software until it works. For example, grants.gov portal still doesn't work correctly though it's been in use for more than one grant cycle. The IGMS cloud interface still doesn't work properly and changes made there do not all update appropriately in Lotus Notes. PeoplePlus didn't work for a while when it was pushed out, wasn't able to properly account for credit hours or TCTO for over a year. There are other examples but the key is that it isn't specific to individual software, it's that EPA pushes the software before it is finished, ready, or has been beta tested.	Let's focus on spending the few technology dollars we have on fixing the systems that still don't work and having computers replaced every five-six years. If there are still funds available then we can look into acquiring new technology.	Allow more time to work together and coordinate programs/resources. There are several areas such as infrastructure, agriculture, forestry, etc where multiple agencies have programs and resources but without sufficient time, it is practically impossible to coordinate them for improved effectiveness and efficiency. This is essentially improved customer service as was asked earlier. Incorporate this integration and improved customer service into a PARS element so that time is allowed to work on these tasks.
1310	1309	5/22/2017		Help disseminate technological improvements to these important constituencies. For example, if EPA researchers have developed or are aware of new technologies for treating arsenic in drinking water, help EPA program offices (including regional offices) disseminate that information to these constituencies. Often the program offices are unaware of the latest in research developments.	Track and provide deadlines (even internal ones) for all activities. Creating goals, timelines and deadlines are action producing. For example, when we set annual goals for compliance assistance and enforcement actions, those activities are much more likely to be achieved. Setting similar goals and timelines for all activities, especially on priority actions for these constituencies, would help ensure timely and effective customer service.	Refocus grant selection criteria and provide grants for direct public health and environmental protection. Grant funding can be spread out among many projects many of which do not directly improve public health or the environment. Giving activities that directly provide public health and environmental benefits (e.g. improve drinking water quality) more priority in grant funding can help increase the effectiveness of the grant dollars.	Connecting EPA's various data systems to allow for centralized searches would greatly improve efficiencies for FOIA and eDiscovery responses. Currently, records on EPA's Outlook email, OneDrive and SharePoint; Lotus Notes email and databases; EZ desktop and EZemail records repositories, Superfund Records management systems, and other shared drives (such as G:Drives) (let alone hard drives) must all be searched separately -- and with the exception of centralized Outlook email searches -- mostly by individual employees. Connecting and allowing for some centralized searches of these records repositories could streamline the search, collection, and review of records and help the agency	

AMERICAN OVERSIGHT

	I
1309	There used to be an actual agriculture sector that would have monthly meetings in our region. These were highly effective because there were people from all the various media/offices as EPA as well as from other agencies (such as NRCS). This sector approach was very successful in agriculture and would work in other sectors as well, such as forestry and infrastructure.
1310	Too many meetings can be unproductive. Some major high tech companies schedule "no meeting" days, such as every Wednesday, to increase productivity. It may be worthwhile to pilot a weekly "no meeting" day for a few months to see if employees find it boosts productivity. Storing and managing electronic data is expensive. Helping employees become aware of the cost of their electronic record creation (emails, databases, reports, etc.) could help reduce the volume of these records and thus the storage and management costs. It could also reduce the burden on employees of searching and reviewing records for FOIAs and eDiscovery by reducing

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1311	1310	5/22/2017	Policies and decisions should be clearly and broadly conveyed in writing so that there is less confusion about what is Agency policy and whether the decision was made by someone with the proper delegated authority.	We work very closely with California on Clean Air Act mobile source enforcement and consistent maintenance of that positive working relationship achieves far better environmental results for a broad swath of states (many of which use the California standards) than abrupt shifts in course that undermine California???s leadership in that area. Maintain and request additional funding for EPA programs that support the development and expansion of local, tribal, and state capacity in enforcement and implementation of federal environmental laws. Maintain adequate funding for EPA oversight of programs delegated to the states, which facilitates better national consistency in implementation, permitting, and enforcement,	E filing that has checks and flags that tell the regulated entity what to fix and that allows basic checks so we can focus on hard to spot issues can be hugely helpful. Checklists are also useful for some areas. Transparency is key. We need credible processes and decisions. Remembering community outreach to the public is also critical in communicating EPA???s work to stakeholders. EPA should commit to transparency in decision-making and decision-making based on sound science, rule of law. Decisions should always key back to our central mission, protecting human health and the environment. EPA should be better at communicating the economic and public health benefits of our regulations, which have been proven by peer reviewed studies (i.e., https://www.epa.gov/clean-air-act-overview/benefits-and-costs-clean-air-act-1990-2020-second-prospective-study).	Credibility for change starts at the top and is undermined by an atmosphere, indicated by actions such as press statements with extraordinary statements issued immediately after the Administrator was sworn in, that makes efforts like this seem more aimed at undermining the work of the Agency instead of supporting it. Yes there are untapped opportunities but there are many who do not trust this process sufficiently to share in a full and frank way. One major untapped opportunity is to value the frontline EPA workforce and their expertise. It is inefficient to have constant threats of job loss.	Give all inspectors and those regularly in the field government phones so that they are not using their personal devices. IT resources and records management should be updated to make it easier for those on the front lines to implement. This would assist in FOIA response and community outreach, which would lead to greater accountability. Electronic reporting for the regulated community also needs to continue to be modernized, such as the E-Manifest push. However, electronic reporting also needs strong (and labor intensive) enforcement to ensure that the data being submitted via electronic methods is still accurate and reliable.	EPA also has areas of shared responsibility and mutual interest with Tribes. The IG has pointed out we need to be better at oversight of our state partners. We accomplish more by being respectful of our partners at all levels while not abdicating our responsibilities. I???ve had a school maintenance supervisor tell me, in settlement negotiations over AHERA violations, that the willingness of an EPA inspector to go to the remote rural school location to conduct an inspection was an example he was already using to get his people to take ALL of the health and safety requirements as real and needed and
1312	1311	5/22/2017	It has become quite clear that job efficiency is being hindered due to the hiring freeze and overall lack of personnel.	With full funding, "better environmental results" could be attained via outreach. When both sides are more informed of the entire process (not just their own) there can be better agreement on which is the best path forward to achieve environmental health for the people of the United State - not for the private sector. The local communities deserve better partnering (via better communication) at every level when it comes to environmental policies, processes, etc.	The EPA can best serve communities when it is FULLY FUNDED so it can properly/effectively/efficiently carry out the mandated activities associated with keeping the people and the environment healthy. Without a FULLY FUNDED agency, the employees will be working inefficiently to plug holes or to work at the whim of the political POV of the day. It is a disservice to the people of the agency and to the American people to not fully fund the EPA.	Please fully fund the agency.	If the hiring freeze was lifted, I'm sure you could hire someone/a group of people to figure that out.	Increased emphasis on communicating between the agencies (especially federal ones). Pitting agencies against each other (or the regulated community against regulators) is childish. It hurts everyone involved. It mostly hurts those who aren't involved (the American public).

AMERICAN OVERSIGHT

	I
1311	As agency lawyers, in my organization we adhere to the scientific integrity policy and also do our best to educate ourselves on the science and work as a team with the scientists and specialists at EPA. The international process for evaluating and vetting the science of climate change is a best practice and advocating for an understanding of how scientists do science and why that consensus process is credible, if perhaps a bit conservative in its predictions, is a best practice of every credible environmental protection agency worldwide.
1312	Fully funding the EPA is a great practice.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1313	1312	5/22/2017	When a current EPA employee changes jobs or gets a grade level promotion within EPA, we should not pay a contractor to run a security background check. This process is unnecessary, time consuming and costly. Each new EPA employee has to pass a security background check when they start. EPA should not pay for two layers of security guards when we occupy private buildings that are not federal buildings. It???s wasteful to pay Federal Protective Services for their contractor security guards and pay the building management for their security guards. The Federal Protective Service contractors don???t provide meaningful services. They operate a metal detector and x-ray machine. They patrol office floors by looking at the ground instead monitoring the environment. Furthermore, private security guards have no authority to protect EPA staff. If someone has threatened an EPA employee, private security guards will not take any action until that EPA	The federal government needs to provide more federal funding to states, tribes and local governments for environmental programs including inspections, program implementation, grants, state revolving funds, technical support, capacity building, and research. States, tribes and local governments don???t have the staff, resources or funding to fulfill their obligations and improve their work. EPA programs and grants provide billions of dollars for high paying American jobs at the local level. The federal government needs to fully fund EPA regulatory programs that protect human health and the environment. States, tribes, local government and the private sector do not have the money, experience, staff or resources to implement all of EPA???s statutory requirements that are required by law and	The federal government needs to provide funding and hiring authority for more EPA staff that provide crucial services like community outreach and technical assistance. For example, we need more toxicologists and risk assessors to explain human health risks to communities concerned about air quality, water quality and/or specific contaminants. Another example is that EPA needs more experienced public affairs and outreach staff to share and explain EPA???s work to elected officials, media, and the general public. Likewise, we need more community involvement coordinators in the Superfund program.	When a current EPA employee changes jobs or gets a grade level promotion within EPA, we should not pay a contractor to run a security background check. This process is unnecessary, time consuming and costly. Each new EPA employee has to pass a security background check when they start. EPA should not pay for two layers of security guards when we occupy private buildings that are not federal buildings. It???s wasteful to pay Federal Protective Services for their contractor security guards and pay the building management for their security guards. The Federal Protective Service contractors don???t provide meaningful services. They operate a metal detector	Computer software updates and changes should happen in the evening when people are not working on their computers instead of happening during the work day. We need to replace printers that don't process data and print documents correctly. We need higher quality pens and highlighters for our work. We also need markers and poster paper for meetings.	EPA already collaborates with other federal agencies. For example, we work with 11 federal agencies on the Urban Waters Program to improve urban watersheds, wetlands and communities. Another example is working with the Department of Energy on EnergySense and other energy efficiency programs.
1314	1313	5/23/2017	I know there are many inefficiencies. I don't know how to address them; but, I do know what to do to identify and implement improvements - Lean Six Sigma.	Background: While we give grants to universities and local governments, EPA fails to tap into the capacity of the thousands of universities (public and private) located within the states across the country to help their local communities address environmental challenges in ways that build the economy and advance the health of residents. Universities and local governments are already partnering together to have students and professors address their community priority challenges. One model, scaled for impact, that has proven to be replicable and adaptable is called Educational Partnerships for Innovation in Communities (EPIC). It systematically matches real world interests/needs with university capacity in ways that benefit all parties, work within	See response to Q2 above.	EPA should make better use of it's convening ability. One example is provided in Q2 above.		It enhances our impact when we align with federal partners on placed based initiatives/

AMERICAN OVERSIGHT

	I
1313	We need more funding for existing training programs at EPA. EPA currently offers Lean Six Sigma, Habits of Highly Effective People, professional development classes, and technical training classes. These classes would improve the agency???s best management practices and adaptive learning. Unfortunately, EPA lacks funding to provide leadership, professional development and technical classes to a majority of people that want to take them. For example, EPA???s leadership development program is offered every 3-5 years to a limited number of staff and managers, which means only a tiny percentage of people are selected.
1314	Arizona DEQ has used LEAN Six Sigma to greatly improve the efficiency and effectiveness of their organization. EPA has begun to work with LEAN Six Sigma. We should enhance this effort across the agency and use it not only to enhance processes at work, but to enhance efficiency and effectiveness in in how we protect public health and the environment while building our economy.

1316	Academic model of competing for funds/grants within the organization to do research.
1317	I think it's a best practice for the EPA to protect the environment. however, we, like other government agencies, are captive to the interests of industry. do what you can to remove that influence and we'll be far more effective. deleting EPA so that industry can reign free - you will regret it.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1318	1317	5/23/2017	Too much of the time politics intrudes on our implementation of laws. For example, political donors get special consideration and high access while common citizens dealing with environmental issues do not.	States do not have the technical resources to take difficult investigations or complex environmental issues. Furthermore, some states are restricted by politics from enforcing against the big polluters as they race towards the bottom of citizen protection from environmental issues.	For local communities, it is important that the EPA protect human health and the environment across state lines so that no one group of citizens is exposed to illegal pollution because of the politics of state legislatures.			
1319	1318	5/23/2017	It currently takes close to a year for some acquisition requests to get through the Contracting office. In addition, even simple requests to add funds to existing contracts, to purchase low dollar subscriptions, and to receive answers can take an inordinately lengthy amount of time. This means that often, even if there is money left in a budget, we are unable to spend it before it expires. It has been shared that the reason is most often due to lack of staff in the Office of Acquisitions Management. We need to be sure that we have adequate staff to do the work required.	EPA has always partnered with States, tribes, and local governments and the public at large - more so than many other federal agencies. To imply that EPA doesn't or hasn't done this is disingenuous. The current budget reductions being discussed will certainly not help EPA continue our proven work/commitment to states, tribes, local governments and the public. Frankly, with the potential 2018 budget cuts, staff reductions, more responsibility will have to go to the states - who are not equipped financially to take on increased environmental responsibilities. Federal oversight is key to ensuring that states don't risk the health and welfare of their citizens - poor states will likely suffer the most as they did in the 70s when EPA was created to help equalize the burden of environmental issues.	Don't cut staff and programs	By the way, the environment is global. Air and water pollution don't stop at the borders. We need to ensure we are working internationally and locally, supporting sustainable energy sources that will shift job creation from dirty industries to cleaner ones. Government needs to support those currently working in dead-end industries (coal, for instance) to support their transition to more economically and environmentally responsible options. The changes needing to be made are at the highest levels - getting industry out of the government - putting our health and the environment before profit.	It would help if progress didn't stop each time new management comes in. Government is renowned for following the whims of those in charge. Until that changes, I have no hope for truly efficient processes, which must take a long term view instead of a 4-year cyclical view.	On the surface, it seems like a good idea to go with a proven system or service being offered by another agency partner. In practice, the systems aren't really that good and we should look to partner with commercial innovators who can build the unique systems we need, not try to fit us into a system that only sort of fits.

AMERICAN OVERSIGHT

	I

1320	1319	5/23/2017	Too many layers of bureaucracy to get things done quickly and efficiently. Some regional programs believe everything has to be run through program counterparts at HQ. HQ seems to believe everything has to be run through OGC. All of this makes even the most routine actions take an inordinate amount of time. This leads to inefficiency. Solution 1: We have bright, well-paid staff throughout the agency. They need to be empowered to make decisions and be held accountable for those decisions. Solution 2: OGC needs to be more advisory than having veto power. Program staff know the technical aspects/needs of program implementation. OGC just needs to see the program staff stay within the legal bounds program and not try to establish policy or craft a actions in a manner that represents OGC's "wants".	We all hear that EPA and States are: 1. Partners; and 2. Co-regulators. Some programs don't demonstrate that and need to quit promoting a Parent -> Child relationship with the states. Some programs believe they tell the states to jump, and the state should has ask "how high". We need to look for actions that are complimentary of one another. We need to identify where states have shortcomings and bolster those with assistance while leaving the better performing programs alone outside of periodic audits to verify those well-performing programs remain at a high level.	Look for true partnerships with those groups. Listen. Figure out where we have common needs and wants and plot a course for addressing those problems.	Eliminate OECA, reduce enforcement staff, and put select enforcement staff back in to the program areas. With OECA free standing, they have goals to meet through the National Program Managers guidance. That typically means more enforcement for the sake of enforcement. When integrated with the programs, enforcement just becomes one of many "tools" the programs can use to improve public health and the environment.	Having come from outside of the federal government - I think EPAs technology is strong. I don't see and any major improvements needed.	Again, it is in identifying strengths and weaknesses of each organization then playing to the strengths of each organization. For some programs, this is the way they currently perform, thus no problem with the concept. For others at EPA, it will be hard because they believe by virtue of being the EPA they are automatically in a superior position.
1321	1320	5/23/2017	My team lead is a bully and now has gotten the branch chief to aid her in her bullying tactics. She pretends to be nice on the surface and tells me good job when I run effective meetings or shine in public but makes sure that I do not have any necessary information to do my job. Additionally, she makes false allegations behind my back to my supervisor/ branch chief such that he now has a false impression of me. At the beginning of April, he said that I'm doing a great job, a few days later it turned into "we put too much on your plate" and then by beginning on May, it became "you're ineffective and you don't do any work". Her instable mental health causes her to see the world negative lenses and she sabotages me at every instance. Her false smile hides her naked aggression. I have gone to my branch chief for help but it turns out that he is her biggest fan and has now turned on me. He's been bullying me for the last 2 months and it is excessively difficult to deal with 2 bullies who have power over me.	Firstly, each of us needs to clear our intentions and remove seeing labels. It is not Us and Them. We are all One with the common goal. When we come from the right intentions, people can feel that in our interactions and respond in like.	In order to serve others and do a fantastic job, one must be healthy from the inside. I think the agency should implement efforts such as yoga and meditation opportunities for staff on a regular basis (3 or so times a week). When a person is mentally healthy, they are able to do their jobs better and serve their customers better. We have weekly meditation at WJC-E 2379 on Thursday afternoons at lunch time. If we as an agency can provide daily yoga and meditation, which will encourage all of our employees, they may be able to come once or twice a week and improve their physical and mental well being.	As a former management consultant and new employee, I can see that the human capital needs are paramount in addressing. There are so many resources who are underutilized, perhaps due to lack of motivation, in wrong roles, managers do not know how to manage employees, unqualified individuals run teams ineffectively.	Yes, EPA needs first and foremost process improvements and then new technologies.	As a new employee, I don't know all the ins and outs of the agency and I would need to do a through assessment to make any suggestion but every organization could use improvement at any given time. My exposure to the agency is limited to that of my team and branch and I have duly noted all the process improvements and shared with my branch chief, who was initially thrilled at my suggestions.

AMERICAN OVERSIGHT

	I
1320	There are programs that work closely with state partners and have Parent -> Parent relationships. Those programs should be looked at as models for other programs that do not enjoy the same relationships. I think the management at my office know of the higher performing programs they could hold up as models.
1321	200+ Employees have been hired in 2017. Hiring great people is only the first step in building a committed, successful workforce. An organization's approach to onboarding is critical to employee performance, an employee's level of engagement, and whether an employee chooses to stay. Onboarding is pivotal for both the employee and the organization. Consider that 90 percent of employees decide whether or not to stay with an organization within the first six months1. Consider further that the cost of losing an employee in the first year is often at least three times their salary2. Onboarding is a process of?Â welcoming, educating,

1322	1321	5/23/2017	Branch management has no interest in the Superfund Removal Program, and the branch chief is out of the office at least twice a week either on S/L or AWL. There is no guidance or assistance from Management!!!	Partnering sounds nice but in reality it is pointless. We spend too much time educating our partners to no valuable end. EPA ends up doing the work anyway, so we might as well just skip the partner part and go right to the solution of the problem.	Cut out all the PC crap and give the field personnel the tools and money they need to accomplish the mission!!!!	Yes, fire most of the management personnel, do desk audits on all GS 11 - GS14 OSCs and reduce the workforce. We have 30 OSCs in my office and only 4 active removal sites are on-going. What are those other 26 OSCs doing!?!?!?!?!	Efficiency is not a function of technology, it's the result of good planning and proper execution of good plans. Keep your technology, we don't need it in the field!!!	Get rid of the SPCC program. Most states have tougher regs and better trained personnel who do SPCC work as their primary job function. In Region II OSCs manage the SPCC program and it's not our primary specialty! Delegate the programs to the States and provide a modest grant and some oversight!
1323	1322	5/23/2017		See Q4.		The establishment of our organization by media area has stove piped the Agency versus realizing efficiencies that could be gained from like programs being offices or divisions instead. For example, method development. Our Agency is very behind in transforming existing methods to benefit from extraordinary growth in technology. Emerging areas are gaining awareness at a rate that new methods for measuring and monitoring them to protect human and health and the environment have not kept up. We do not have an office or system to establish one-stop shopping for our external partners - states, tribes, local communities, the regulated community, the public, and even private sectors to know our priority		See Q4.

AMERICAN OVERSIGHT

1324	1323	5/23/2017				EPA Region III employs a decentralized approach to quality management. Each Division or Office is responsible for determining the specific environmental programs and activities to which the quality system will apply. The Region is comprised of five Divisions and six Offices. That means each division has to have QA staffs to manage its QA requirements. Given that all Division are under the same set of QA regulations there seems to some duplication of effort. One such effort is the role of the Division QA staff is to tracks the number of projects in progress within his/her Division or Program Office; the number of projects involving environmental data operations; and the title, preparer and date of QAPPs		
1325	1324	5/23/2017				The functions of the Office of Federal Activity (OFA) should be absorbed into different offices in OECA or other parts of EPA such as OITA and OLEM, in order to reduce number of staff in management and administrative positions at the Agency. OFA currently has a total of 26 employees, including 6 managers and 2 administrative staff, including one secretary and one budget analyst. By merging the Divisions of OFA into other Offices OECA could reduce overhead costs.

1326	1325	5/23/2017	In developing rulemaking packages it seems like the rules are always changing as to what needs to be in a rule package. But given that we won't be doing regulations to help protect the environment, this is probably moot now.	Being here to actually interact with them. Getting rid of staff will prevent us from partnering.	Getting a commitment from upper management to actually protect public health and the environment, which it does not seem is there.	Being able to conduct technical reviews without having to scrub documents to try to make it more palatable given the favoritism being shown to the oil and gas and other extractive industries.	Make remote access technology more reliable. It is frustrating when teleworking and you can't access the network.	We do that now.
1327	1326	5/23/2017	It takes quite a lot of time for staff and administrative personnel to file any type of cost, including travel. The systems are unclear and inefficient. The Concur system is not user-friendly nor intuitive. It has a confusing lay-out and series of steps.	More funding for local programs and more enforcement on guidelines for data practices, including collecting, recording, and reporting.	More personnel to handle increased communication needs	Bureaucracies are inefficient by design.	Cloud computing and big data platforms. Open-source software for scientific study. Encourage peer-reviewed publication.	Encourage standardized best data practices across agencies and states as well as shared data platforms for efficient and cost-effective information sharing.

AMERICAN OVERSIGHT

	I
1326	
1327	Scientific Advisory Boards should be composed of independent scientists who are the best in their class and field, and free of financial conflicts of interest. EPA scientists should use data that is best in class for the question under study, such as human health information, which may be confidential and not available for public distribution but is the best information available and fit for purpose. Execution of the mission of the agency, to protect human health and the environment, cannot be efficiently done in a cost effective manner if the best scientific data is not available to EPA scientists.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1328	1327	5/23/2017	Currently, at least in my current section, management only allows for 1 day/week Regular AWL. Most sections allow for 2 days of regular AWL. Since its a proven fact that my work is portable and we have access to all EPA systems, working 2 days of regular AWL will allow me to be more efficient ad less stressful with horrific commuting time in NYC. The 2 days of regular AWL allows me to recovery mentally and physically from the daily commute into & leaving NYC. As a support staff, I am constantly assisting other EPA colleagues with getting their projects initiated and moving forward to completion. A majority of the people that my section help are allowed 2 days of regular AWL and often coordinate with us from their remote AWLs.	I think that EPA's public outreach staff who attend various community/public meetings are usually part of meetings to inform or provide updates to the public. I don't think there should be more working meetings between key EPA staff and communities in order to help the public with completing paperwork/grant applications/understanding the process/steps designed to help them. While the public outreach staff are an excellent resource for communicating with the public, they are not involved with the daily management of projects or might not understand the complexities of the work process.	More connection between the public and key EPA staff personnel involved with state/local projects. While we have upper management and other key personnel involved with the public, the public concerns and frustration may not be clearly conveyed to staff level personnel. If there's a disconnection, how can we truly serve the public?	I am not sure about untapped opportunities in EPA. However, I would emphasize the need for management to hold everyone equally accountable for getting work completed. At times, it seems like responsible/effective employees are handed more work to complete because of the lack of effort demonstrated by others who are not held accountable. While this common practice is unfair, its an easy way for managers to mitigate problems and project delays. It almost seems like these poor performers know that they protected by the Agency/labor laws and will seek ways to accuse management of unfair treatment.	As long as we continue to have portable and effective lab tops with the relevant software to do our jobs, we can stay effective and efficient.	Not sure. However, there should be some clear MOUs between agencies and states that we can adopt and understand in order to complete mutual activities. However, this needs to be clearly shared with staff, not just management. Maybe annual or semi annual work meetings between key staff personnel from all agencies listed in the MOUs should be considered???
1329	1328	5/23/2017	It would be nice to have office-wide people who specialize in contracts, grants, travel, etc. which requires training. Right now, technical staff do everything.	We already partner with states, tribes and communities very well. My only comment is that they need to be funded! A lot of the work is done through grants that are slated to be cut. It is a very important partnership and a big bang for the buck!	Cleaning up contaminated properties where risks do not pose a threat to human health and the environment. I think cleanups can and should be more efficient, especially if EPA puts pressure on PRPs who are the main reason that cleanups are slow, but it is also important that the cleanup is done right. There are many horrific examples about what happens when people live and work on contaminated areas.	The EPA is already so streamlined, that it is difficult to imagine more efficiencies. Most staff work above 40 hours a week to keep up. The Federal Facilities Superfund program would be a lot more efficient if EO 12580 was removed which designate the Federal Facility as the "President". Cleanups are usually delayed because of the recalcitrant PRPs, including Federal Agencies. Giving EPA the lead authority at Superfund sites has proven to be less costly and more efficient (both private and Federal Facility).		Putting qualified people in positions of influence. Superfund is a highly technical and legal program that requires years of experience to understand. Also, i putting the attorneys and technical staff in the same office would be efficient, such as FFEO (Federal Facilities Enforcement Office) and FFRRO (Federal Facilities Restoration and Reuse Office). Also, consider joining parts Federal Agency and private Superfund (FFRRO and OSRTI).

1330	1329	5/23/2017		Propose State Management Plans to address pesticide water-related issues (monitoring vulnerable watersheds especially drinking water). Option was considered in 1990s; but targeted 5 herbicides. Risk management decisions often seem based on overly conservative estimates of predicted drinking water concentration.		Reconsider 99.9 percentile of regulation policy for pesticides-acute dietary risk assessments. Consider using independent external group (outside of OPP) to set toxicological parameters for pesticides.		
1331	1330	5/23/2017	Training. Should be able to login to our training site (Skillport) and see training descriptions, when they were posted, WHEN THEY ARE DUE, etc. Micropurchases are time consuming. Why does it autopopulate someone else's address (Cincinnati) when I login? Doesn't my computer know that I've logged in with my credentials and my shipping address and phone number?					
1332	1331	5/23/2017	Delegation used to be to the lowest level possible, and people performing the work took ownership of it and were empowered. The last ten years have seen that removed as all decisions have to go through multiple layers of upper management, and depending on the politics, certain issues like anything oil and gas related were required to be elevated to HQ for fear of releasing the wrong opinion. That is certainly not good science. It is policy control. Return delegation to the lowest level possible, and give staff the ability to answer questions and make conclusions without the frustration of good work being hidden from view if the answer is not convenient.	Clearly lay out what the requirements are and the end goal. Do not be driven by initiatives, but rather have regulatory barriers to meet, and make them clear. We have too many things we work on that do not have any governing regulations, like environmental justice, children's health, global warming, etc. Focus the work and it will be easier to partner for a clear result.	It would be painful, and organizations used to protecting their turf would have to be dissolved, but there used to be better coordination when all the enforcement functions of the regulations were integrated with the program and grant functions. If there was a RCRA permit violation reported, oversight of State grant monies, permit modifications which might be required, or enforcement activities that might be used were all coordinated under one Division manager who got a clear sense of the big picture. Now those activities are split among multiple branches, multiple divisions with completely different national reporting goals. Priorities are not the same, and the focus is on getting good counts on national goals rather than addressing problems.	Our office used to have one or at the most two people who handled external affairs. They dealt with the press, reporters, or public interest groups to relay scientific decisions. Now we have an entire Division for external affairs who seem to be composed of an amalgamation of special interest groups and special emphasis programs. All content must pass through them before going "public". This adds zero environmental protection while also adding additional time (costs) and is incredibly inefficient. Changes to scientific papers are made to conform to policy desires rather than reflecting scientific reality. Often changes made to letters by external affairs special interests make the	Sure, we could all have I-phones with access to our emails, be able to have control of our own computers so we could download programs or software useful to our current task. But then you would have security issues multiplied by the thousands, and enormous costs also. Nothing practical comes to mind.	If we have shared responsibility, Congress may need to change laws to designate who is the lead. Otherwise, understanding our regulatory responsibilities and how they align with what may be more stringent requirements in State programs will help. Most of our programs are designed to be delegated to the States, and we need to not overlay federal initiatives on top of what are the regulatory requirements. If the goal is meet a certain contaminant MCL in drinking water, we should not then also make the state give us a breakdown on which ethnic population is being protected. We

1333	1332	5/23/2017	People plus suggestion - people plus should have the feature that allows employees to request compressed schedule change and following approval, make that change without having to ask time keeper to make the change. More authority should be given to the Division Director level in making decisions about the work. Years ago, Division Directors routinely made decisions on variety of issues, including money, public products, etc. In recent years, it seems like most decisions have to be raised to the OD level. Give all the OD has to do, this creates significant delays and affects morale since it is interpreted as a lack of trust. I think all managers should be required to achieve a certain amount of continuing education credits in leadership and management. We have the infrastructure in place with SkillPort and EPA University. What gets measured gets done, so we should have SESers be accountable for such	We should avoid unfunded mandates. If we want states, tribes and/or locals to be doing something, then we should figure out how we can support them with grants and/or cooperative agreements. I realize this suggestion would reduce EPA extramural funds but it would give more resources to others to allow them to decide how best to use them in support of mutually beneficial objectives. As for partnering with private sector, I think each major EPA program should have a standing FACA from which the programs could seek advice from representatives of these important groups. EPA should support major conferences on routine (yearly or even every other year) basis to physically get people together to learn from each other, create and	I believe my response to Q2 also applies to this question.	Give more authority to the Division Director level to make decisions and only rise the most important of decisions to the OD and AA levels. Would save a lot of time and have a positive affect on morale. I continue to think AAships and Offices are too stove-piped. I'd like to see more cross-AAship collaboration where it makes sense. A while back, we tried a "One EPA Approach" but , but this will only happen if the SESers are held accountable for doing so.	Haven't been too thrilled with Adobe Connect. I think we should go back to Go-To meeting. Continue to embrace Qlik Sense for visualization.	Great question! I think we should support organizations that bring federal agencies together that on mutually beneficial topics. For example, I think the Agency should do more to support the Federation of Earth Science Information Partners (ESIP) that brings together various federal agencies (e.g., USGS, NOAA, EPA) as well as academics and private sector to address topics of mutual interest. I'm sure there are other similar groups that deal with such as health. And if you want States, Tribes and Locals to be able to be involved in such groups, they would likely need scholarship support since they have

1336	1335	5/23/2017	Personnel policies across the board are significantly burdensome and prevent effective management. Hiring processes for example. Non-expert HR staff review applications and provides the hiring manager only a few on the Cert. This immediately takes information and judgement away from the most knowledgeable person. The questions for applicants that accompany the hiring announcement are worthless.	Effective partnerships are based on a good understanding of the facts. We still lack a common understanding of the current state of the ambient environment, of discharges/emissions, and of the compliance status of facilities. We should partner to bring EPA, states, tribes and locals into the information age through better ambient monitoring, emissions monitoring and sharing data on those conditions with each other and the public.	Effective partnerships are based on a good understanding of the facts. We still lack a common understanding of the current state of the ambient environment, of discharges/emissions, and of the compliance status of facilities. We should partner to bring EPA, states, tribes and locals into the information age through better ambient monitoring, emissions monitoring and sharing data on those conditions with each other and the public.	If we had a good flow of information on ambient environmental conditions and real time information on emissions/discharges, regulations could be streamlined significantly and enforcement presence and costs could be reduced significantly.	1) monitoring technologies; 2) the information technology to replace existing paper-based facility monitoring and enforcement by state and federal regulators; and tools to make monitoring and compliance information available to the public	Effective partnerships are based on a good understanding of the facts. We still lack a common understanding of the current state of the ambient environment, of discharges/emissions, and of the compliance status of facilities. We should partner to bring EPA, states, tribes and locals into the information age through better ambient monitoring, emissions monitoring and sharing data on those conditions with each other and the public. By having good environmental data, EPA could step back from states where environmental outcomes are good and focus on helping states where
1337	1336	5/23/2017	Just like law enforcement everywhere, there are more environmental violations that occur than our (federal, state and local) resources allow us to pursue. At the highest level of management, there needs to be a review (such as a pareto analysis) that looks across all of our obligations and identifies which ones are the most important to pursue given our limited resources. The strategic plans that OECA management requires the regions to submit are not worth the electrons it takes to send them in. They don't even identify all of the statutory programs. How can one appropriately allocate resources without proper analysis (and it doesn't have to be a PhD level analysis to improve what we current do). Each sate and each region should identify they primary regulated universes, what human health and/or environmental problems exist (including those caused by noncompliance), look at the resources available, then prioritize the allocation of those resources taking into account whether the issue should be primarily addressed at the federal,	See the response to the above question.	Frequently, states are not finding significant violations that exist at facilities for a number of reasons. We need to work with the states to build their capacity to find and fix violations rather than compete with them for enforcement however states have to be willing partners to be part of a national program. We have limited (at best) ability to influence their resources, their pay to employees etc., but given the state of their existing programs, we need to do more to improve the quality of their program to find and fix noncompliance. Start with my response to the first question to identify the big issues, then work to address them. Provide better guidance to the states, provide consistent training for the states (we have training requirements for EPA inspectors, so maybe there should be a program where state inspectors can or should be expected to take federal inspector training or have a program that is at least equivalent).	We need to make more use of screening tools when conducting individual statutory program inspections (media inspections) to provide information for other programs such as when inspection chemical facilities, ask four to 6 questions about their TSCA program to get a basic feel for their knowledge of and compliance with the major portions of core TSCA requirements.	The RCRA Air regulations (Parts 261, 264 and 265 Subpart AA, BB and CC) need to be updated. While there is some overlap with the CAA regulations, there is not complete overlap (RCRA has the potential to regulate smaller facilities and smaller amounts of waste etc.). However, over time the CAA has ratcheted down on leak definitions and has allowed for newer technologies (such as the use of a FLIR camera) for leak monitoring and RCRA has not. Overall, the regulations could be simplified and made more clear.

1338	1337	5/23/2017	The RCRA Import/Export program has historically been split between and OLEM's policy and program leadership and OECA's implementation of the notice and consent procedures. While staff has made the dispersed programmatic responsibilities work, it is inefficient and requires duplicate efforts and management oversight. The program could be executed in a more efficient manner if all staff and responsibilities were consolidated into OLEM.			Moving the staff and responsibilities for the RCRA import/export notice and consent process from OECA to OLEM would increase efficiency by reducing duplicative management oversight.		
1339	1338	5/23/2017	There are certain required trainings we are required to take each year that are a waste of time. I was hired recently and thought the time it took to get my phone, computer, ID badge (over a month), and lack of coherent resources for new employees was pathetic.	EPA should lead discussions with states on what problem areas to focus on, and how to bring all states up to a minimum standard, not just on paper, but in on-the-ground implementation. The foci should be on our prime statutory responsibilities.	We are...terrible at marketing the service we provide to the public at large, local communities, and even regulated entities. Our pollution prevention regulations even the playing field for the regulated community, so long as we don't provide little loop holes for them to jump through. We need to inform the public how much of what gets done is due to funding/resources that come from EPA.	I do. EPA needs to do a better job of ensuring historical knowledge and expertise is passed down to newer employees, and newer employees should also pass "up" skills related to new software such as GIS, IT, and environmental modeling. Building in two-way mentoring would help alleviate the issues EPA has with its older, heavy retirement-ready workforce retiring and the loss of significant programmatic expertise. EPA ALREADY HAS A PHASED RETIREMENT PROGRAM that addresses mentoring and succession planning. IT SHOULD USE IT and incentivize its use! Within the Office of Water, a whole reorganization could result in improved efficiencies and greater	Now that the windows are locked shut, the federal triangle complex sucks. it is a completely inefficient use of space. Multiple times every single day I am interrupted by colleagues talking about personal issues, or even work issues but at a volume that is distracting. We constantly run into issues with our small amount of conference rooms being booked. There is so much space that actually goes unused throughout the work week. I believe EPA could really benefit from a workplace reformation like the one GSA went through recently. GSA shrunk its physical footprint by promoting greater use of telework, and ditching assigned cubicles in favor of flexible workstations, collaborative spaces, and

1340	1339	5/23/2017	Submitting leave requests AND having to enter leave on the schedule in PeoplePlus. The two are redundant and often lead to inconsistencies which managers have to reconcile upon approval. A manager's approval of the timecard should be able to serve as approval of leave. Every system should have single sign-on thru LAN (e.g., Concur, which is still separate).				We need improved technology - the wifi addition in the last 2 years is fabulous. Now we need better conference room capabilities (speaking for HQ Potomac Yard) - better monitors rather than noisy projectors with burned out bulbs, wireless connections to monitors, better conference phones and ceiling mics, better VTC cameras (so fuzzy you can't recognize people). Not only does this make us more productive and better able to collaborate/communicate, but it boosts morale and confidence by making staff feel like the agency is investing in tools to perform better.	
1341	1340	5/23/2017	I am part of the Office of Research and Development (ORD). Scientific research background and expertise are crucial for successfully accomplishing the ORD mission. However, my management is critically deprived of advanced scientific expertise and therefore cannot provide proper judgment about the value of different initiatives and projects (even after consultations with established scientific experts). Therefore, important projects and initiatives are not given consideration, funding, and management support and cannot be developed or implemented. On the other hand, projects with little substance are supported and funded with unreasonable high amount of fund and resources. I want to suggest that all ORD managers are selected among the best qualified and accomplished scientist, with the highest degree of education and significant scientific achievements. This is in line with the presidential memorandum from 2010 on scientific integrity.					

AMERICAN OVERSIGHT

	I
1340	
1341	At other research organization, as NIH, OPM rules about scientific research positions are enforced. OPM rules that scientific research positions at GS12 level and above can only be hold by scientist with Ph.D. This rule is not used at ORD, U.S. EPA, because scientific research positions at ORD are re-classified as non-research positions. In addition, managers are not considered to be scientific leaders and therefore their scientific accomplishments are not considered during the selection process. NIH also uses objective criteria for scientific accomplishments as impact level (citation level), such criteria are not used at ORD, U.S. EPA.

1342	1341	5/23/2017	A few items for thought: 1. IT Systems are disparate systems that fail to interact to their fullest potential. Our finance system is based on a Momentum product, which is a shared service across the entire federal government. Other agencies are able to work solely within the single Momentum product and its modules for all aspects of contracts and financial management. However, at the EPA, we employee three different administrative systems; Momentum for Financial Systems, EAS (Oracle based product) for Contracts, and I believe a home-grown system for Grants. These disparate systems require interfaces amongst each other and in-efficiencies across the life-cycles of grants and contracts (award to payment). In some cases, members of OCFO have to receive pdfs from one system and then, manually enter the information into another system. In an ideal world, we would be maximizing our investment in IT, if there was a coordinated approach to have all three administrative systems within one	1. In many cases, the agency has historically given money to entities to incentive them into doing what is good for the environment. However, in many cases, small and local entities would love gifts, but also be fine with the government providing low to no interest loans to do things that benefit the environment. A good example is a farmer near my hometown of Harrisonburg, VA. David Hughes is a turkey farmer who wanted revolutionize the dead area on this farm, by inserting in a solar field to run his 4 turkey barns. Turkey farmers are immense drains to electricity because they have be constantly powered 24 hours a day. By investing in solar energy, David was thinking about the environment and reducing his overall electric footprint. The only problem was that the initial investment was massive. David went to state and federal		As indicated in question 2, the EPA should be in the forefront of providing incentives to the local business and communities to be stewards of the environment. The major contributing factor in not moving local business and communities to more sustainable practices is a lot of time the up-front capital needed to initiate projects. Many Americans who voted for Trump don't want government hand-outs, but want to be enabled to be sustainable. Low to no interest loans to promote brighter tomorrows.	1. In the agency, we are still based on the dated storage model of servers and warehousing, when modern technology has moved to cloud computing. Instead of buying more and more servers to house more and more data, cloud computing should be considered. 2. As discussed above, in the financial community, shared services need to be adopted as our agency is not unique in its practices (and if we have created uniqueness, then we need to investigate why). By leveraging centralized products across the federal government, the agency is able to capitalize on the streamlined functions.	
1343	1342	5/23/2017	Requiring staff to complete Ethics training and confidential financial disclosure report. It's a waste of time and should be done away with because higher level officials are not held to the same standards anyway.	It would be helpful to develop more programs like the technical assistance to communities under Superfund so that EPA staff can work with states, tribes, local communties and stakeholders to provide workshops that increase their capacity to understand the basics of rules, regulations and processes of the Agency as well as the environmental, technical and legal issues in their communities.	One way would be to give the technological tools such as smart phones and hot-spots for connectivity to the community involvement coordinators. Right now, whenever we're out in t he field we have little to no chance of staying connected and have to rely on public networks such as in hotels that are not secure. Connectivity and devices for when we're in the field would help in us having basic tools to provide great customer service especially when we're on travel in communities.	It would be helpful to have more funding for travel because the Agency misses out on building trust with states, tribes, local communities and the private sector by remaining absent for extended periods of time from cleanup sites or other environmental projects that matter locally. Having names and faces connected especially at the beginning of projects goes a long way in building trust and increasing the efficiency of ongoing communication and reduces costs by making it easier to forge ahead with projects instead of having to dwell on plans endlessly because of that lack of trust.	Smart phones and hot spot devices for staff who need to travel to sites.	Many states and local jurisdictions lack budgets and initiative. Their default setting is to rely on the US EPA to step up to address many environmental concerns. Unless there is enough budgetary support from all levels of government to address environmental challenges, it is impossible to accomplish more. Right now everyone is stretched beyond limits.

AMERICAN OVERSIGHT

	I
1342	1. Telework - As an agency and with our mission, we should be at the forefront of teleworking to reduce our commuting and professional footprints. What I find is that other agencies are doing more with modernizing the idea of a "workspace" and reducing commuting than the EPA. For instance, GSA does not assign offices in some of their organizations. Instead, when an employee must come into the office, they hotel. This reduces overhead costs by not requiring individuals to occupy set space. US Patent and Trade mandate teleworking and encourage employees to telework on a full time basis. My point is that with our mission, the EPA should be out front in the discussion of
1343	Yes. Short meetings. Managers should be required to have regular short half-hour to one-hour meetings with their staff with a clear agenda and a discussion of goals and metrics to accomplish them--instead of just being long drawn-out information dumps. The Franklin-Covey training for managers is a top-of-the-line learning experience and a tool that all managers should be required to take to become more effective, efficient, and accountable.

1344	1343	5/23/2017	The priorities of the new Administration have prevented us from doing our jobs efficiently and effectively. And you know it.	Well, first of all, don't cut the grant amounts we give to the States. We saw this happening in the past to a smaller extent under Bush and it quashed a lot of the States' abilities. You have also put the kibosh on us presenting anything to communities or the outside on climate change, environmental justice, an enforcement. We are not job killers. You are environment and community killers.	Let us do our jobs with the resources we need to do them. Do not eliminate the important programs that the public also agrees are important (e.g., climate change, environmental justice, toxics). Do not slash our budget. Do not reduce the workforce.	Inefficiencies result when a program is in operation and then an administration change obstructs it.	EPA has been slow in the past to adopt new technologies but it has improved greatly in the last few years. Keep it going.	The States don't have the resources (time, people, money) to work with us if their grant money is cut or if their State funding is reduced. Don't make it worse. We need to have a mandate for States to submit hazardous air pollutant (HAP) emission inventory information. Currently, only criteria pollutant information is required. This creates an inefficient and error-prone loop. We are required by the Clean Air Act Amendments to do assessments of the toxics (HAP) programs but we have no mandate to collect HAP inventory information. We have worked with the States for many years to develop this capability
1345	1344	5/23/2017	The reorganization of the **[REDACTED B6]** totally changed how we carry out our job and it is extremely inefficient. I no longer do work for **[REDACTED B6]**	I have been honored to work in the **[REDACTED B6]** I have seen amazing environmental accomplishments completed in the State of **[REDACTED B6]**. Our Office Director **[REDACTED B6]** was a strong leader and advocate for the environment. After **[REDACTED B6]** there was a new office director who was a disaster, although she was supported by the **[REDACTED B6].** The RA and DRA covered for her for years. As a result, those two decided to "reorganize" the **[REDACTED B6]** We no longer serve the State of **[REDACTED B6]**, who no longer have a local voice for their environmental programs. This is all done at the **[REDACTED B6]** level. The reorganization is a disaster, and I believe it was done because we documented waste, fraud and abuse of the office director. No one has been held accountable.	Local Field Offices - we are the people who are face to face with the states, tribes, local communities, public, regulated community, everyone. When the public calls about an environmental questions, they call us. They don't want to talk to some bureaucrat in another state. The **[REDACTED B6]** Field Office has proven it's usefulness for many years, and still does. You cannot manage superfund sites, tribal work, etc. from a Regional office 800 miles away. It has been proven in the Region 10 Evaluation of Field Offices how effective and cost-efficient field offices are. You can also eliminate many positions in Regional Offices. There are too many layers of supervisors, approvals, management, etc. in Regional Offices. Employees and managers need to be empowered. Too many levels of nonsense.	Evaluate management positions; there are too many managers who do not understand their positions and the basics of how the agency operates. They are obstacles in getting real work done. There still needs to be administrative positions who know how to process travel, timekeeping, purchases, training forms, etc., so higher graded technical and professional staff do not need to worry about it. There are so many different programs that we have (EAS, Compass, IGMS, etc.) that professionals are expected to know and that is impossible with their workloads. Have administrative staff help with that. The **[REDACTED B6]** was so efficient because of our Admin Staff who assisted all positions. I	See Q 4 - there are so many computer systems that it makes more sense to have administrative people know and really understand these systems, rather than expecting all professionals to understand them. These systems change continually and there is always training required for these systems. Have administrative people spend their time (at a lower wage) and be more efficient and save time and costs with the professional/technical staff.	In the **[REDACTED B6]** Office our staff work very closely with other federal and state agencies. The only issues are when the higher level managers get involved and they don't understand what is going on. We need to listen to the technical folks who know what's going on. Since we have to go through so many layers of managers, e.g., RPM, to Unit Manager, to Program Manager, to Deputy ARA, to ARA, to Deputy DRA to RA, you lose everything in translation. Empower the right folks who know what is going on. Make decisions based on what is the right thing to do. NOT ON WHAT IS THE POLITICAL RIGHT THING

AMERICAN OVERSIGHT

	I
1344	Yes. Don't hate your employees and the work they are committed to doing. Don't threaten them with elimination of their programs or their jobs. Don't insult them. That is so obvious that it wouldn't even appear on a list of things you should never do if you want to lead and improve an organization. The best organizations value their employees, support them, and find ways for them to flourish at their jobs.
1345	The **[REDACTED B6]**Office is a model of efficiency and cost-effectiveness. At least it was before we were reorganized and dismantled. This is the worst action I have ever seen with the federal government in my long federal career.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1346	1345	5/23/2017		In my opinion the states can do most of the work that we do with regard to environmental issues involving their state. All they would need is more resources. Most of the programs are delegated to them and they are responsible for implementing them with oversight by the EPA. Some states are not as strong environmentally, but here in region II our states are strong and well equipped.	Customer service? Most of the public mixes us up with the our state counterpart, so if either does good both look good and if either does bad both look bad. Because our programs overlap so much nobody knows which agency is responsible. There need to be clear defined roles for each agency. The states can handle the burden of most of the environmental programs without federal interference. The only exceptions are emergency response when the resources needed exceed state capabilities and sites that cross the state or country boundary and have a larger regional effect. The regulated community would be happy to only have to deal with one agency and the state role is more appropriate.	Personally we are WAY overstaffed. It appears that we took on more roles in environmental issues that go far beyond our core mission to justify all of the people we hired. The amount of sites we receive are much lower and the states and local communities have gotten more efficient and up to speed on environmental issues. This wasn't the case when the agency first started. Now that the other agencies can handle more there is a severe overstaffing of our agency. Trump has it right when he says we can be gutted. The oversight of the state programs is BS. Let them handle it and provide them more resources. Most of the regulated community knows what their requirements are and they comply. The learning curve is	I am not specifically familiar with new technologies, but I'm sure they exist. I am in support of maximizing our use of them and we will become more efficient and effective if we do. I know it costs the government at least twice as much and takes us a lot longer to clean up a site then it does in private industry, so there is something definitely wrong!	Many programs (air, water, RCRA) can be handled completely by the states with little oversight of the federal government. Most of the regulatory community knows what they need to do. The superfund program can be more delegated to the state as well. Some of the emergency response program needs still need to exist on a federal level due to the NCP requirements, but other than that EPA's role can be severely diminished.
1347	1346	5/23/2017	A. The Office of Research & Development currently operates under a "matrix" system of management, where many line employees are answerable to two different sets of managers: (1) Traditional lab/division/branch management, and (2) national program directors and their staffs. This system generates extra confusion, extra e-mails, extra conference calls, and pushes administrative burdens onto portions of the staff that did not previously have to content with administrative responsibilities. In return, I'm not sure that there is actually more or better research being produced. B. Credit card "micro" purchases. We are currently allowed to make small (<= $3,500) laboratory supply purchases directly, on a government credit card, without going through the formal contracts/purchasing process. This saves huge amounts of time and effort. However, the maximum purchase ceiling has not kept pace with inflation.

1348	
1349	I don't know how to respond to this question.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1350	1349	5/23/2017		Increased funding for federal EPA programs to enable more opportunities for EPA HQ staff to travel to the regions and the states and more funding for the regions and the states so that they can travel more locally to provide assistance to and address the needs of the states and communities.	See response above. In addition, we need to continue to support our Hotline services to regulated facilities so that they can always call and get immediate assistance in order to comply with EPA statutes and regulations efficiently and effectively.	We need to figure out a way to bring work back into EPA that has been farmed out to contractors. Contractors are very expensive and a good deal of what contractors do for us could be done in house. Also, there are too many staff and managers doing mundane administrative tasks that could and should be done by support staff. For example, in order to create Purchase Requests (PRs), individual staff (including higher paid professionals) spend hours learning to use the EAS system (that is not very user-friendly, by the way) when that task should be completed by a designated individual who is trained to use the system for the rest of the staff. Much more time and cost efficient that		
1351	1350	5/23/2017				Current rules prevent the EPA from paying for membership to a scientific organization for conference attendees, even if it will reduce the cost of attending a conference more so than the membership fee. I have seen the EPA spend hundreds to thousands more, per person, when paying for conference registration fees for non-members.	Tableau is a great, user-friendly data visualization program that could benefit the agency by improving translation of information to the public.	
1352	1351	5/23/2017	Having someone like Pruitt makes doing my job efficiently and effectively impossible. I cannot believe such a person is the head of an Agency like EPA. I am embarrassed for us.	1) listening to them; 2) allowing EPA to truly focus on our mission to protect human health and the environment; 3) having a principled Administrator that career staff can believe in, and that truly wants to uphold the Agency mission.	1) Listen to them and take their feedback seriously; 2) have an Administrator that truly cares about protecting the environment.	Promote telework.	Stop having such lengthy review processes that make it nearly impossible to do anything. Empower career employees. We are so demoralized right now.	Appoint an Administrator who actually believes in protecting the environment.

1353	1352	5/23/2017	This will be a Superfund or site cleanup comment. The Superfund retroactive liability law obligates EPA employees and serving contractors to invest a lot of time and effort in researching property ownership and corporate changes. There is sometimes not careful attention to understanding the manufacturing activities that went on, especially at older sites, where original releases of pollutants may be a century or more ago. There is a case to be made that this inattention to industrial history is not important practically, if site examination is thorough. I suspect that more attention to technological history can sometimes be fruitful. I have encountered a couple of instances where I have found considerable differences between the assumptions and beliefs of ATSDR and either State or EPA versus the actual manufacturing technologies that were once present at a site. This can translate into unjustified expectations about the	Proposals to add a site to the NPL are presumably released for broad public comment. If issued from the USEPA, the Administrator could specifically invite review comments about EPAs understanding of historical industries at the proposed NPL site from a relevant industry association or from a historical society within the pertinent State. Comments could then be given weight within EPA's internal review process. I doubt historical societies would do this, unless specifically invited to weigh in. Environmental issues can be hotly contested, with strong feelings. Accordingly left to its own devices, a historical society might tend to leave technological history alone within the context of a hazardous waste site as needlessly provocative. Likewise of course, States could each consider doing something similar for contaminated sites that				
1354	1353	5/23/2017	I have only been at EPA for short time, but have been a civil servant for 20+ years. It was a complete culture shock to me that managers within EPA do nothing to stop the bullying and sabotaging of subordinates by, sometimes, groups of EPA non-manager employees (similar to high school cliques). I have been told that the only way to get things done within EPA is to "make friends." It was shocking to me that co-workers won't help unless you are "like." I have also been told that I haven't been at EPA long enough to have "friends." This attitude slows down productivity, especially when an employee has to be more concerned with the addition of the liquid form of ex-lax into food or drinks. Managers need to acknowledge the behavior and put a stop to it. This type of behavior is should not be acceptable on any level because it affects the overall ability to be responsive to state, tribes, local communities and really focus on a safe and healthy environment.	EPA should reach out more for input, ideas, problems, and even success stories from these groups. I think it would be eye opening to offer an "anonymous" survey to these groups as well. It all starts from the top and there must be a senior leader focus and priority put on partnering.	We need a better process and program for tracking request (letters) and responses to incoming correspondence. As it is, letters can float around and bounce from office to office until it reaches the office that can actually prepare the response. The Army (although slightly larger than EPA) has a entire office solely dedicated to tracking incoming and outgoing correspondence.		I'm not sure what new technologies are out there, but the Correspondence Management System needs to be modernized. It is incredibly slow and time consuming to use. I wish I had a suggestion for a technology that can replace CMS, but I don't. I am sure there are off-the-shelf programs that could be of better use than the existing system.	The committees structure is out of control. A centralized point within the agency for tracking meetings with external partners would be a helpful thing. Honestly, I believe there a many that overlap in content and could be combined.

1355	1354	5/23/2017	A majority of the procurement, open government regulatory and statutory requirements create an alphabet soup of process that is often conflicting, work at cross purposes and by definition prevents efficiency and effectiveness. Classic example is the mandate to pay contractors quickly and efficiently usually within 15 days (which is better than private sector payments). Yet I have had incomplete or unfinished products. Not only do they get paid, I have to pay them to fix it. Internal directives to spend the money (burn rates) are a higher priority than content and substance, what message does that send? Not a very accountable process. In my previous work with states and in the private sector, if the job wasn't done right, I didn't pay until it was. Not in this system. OPM and OMB mandated guidance further adds more layers of inefficiencies and delays. Assess what is your expected outcome and then you can tackle which requirements that need to be fixed. If you are just feeding the beltway bandits, job done. However if	Voluntary programs with private sector were virtually eliminated over the past decade except the SMM work. There were some excellent sector based technical assistance programs done before that. Some were more successful than others so reassessments of what previously worked combined with targeted data based driven results with best practices and sharing information could help everyone. Must focus on the hot spots of environmental and economic concerns where the biggest opportunities are. Partnering implies both parties have a shared responsibility. After a decade of already reducing the federal share of programs through ASTSWMO and other program associations (over 20% cut already) it behooves OMB and budget cutters to stop nickel and diming with huge regional and state program cuts while military spending and entitlements go	Customer service begins with how one treats others. The golden rule. It all starts at the top. Attacking fundamental science; muzzling experts; insulting the intelligence of technical staff; not filling the 79 political appointees to the agency; making huge budget cuts at the national, regional, state and local level; attacking the benefits of public servants that are held to higher standards and generally not allowed to do other jobs does more harm than good. Asking for feedback is an important start. Actually sharing the appropriate responses and incorporating them into genuine, effective policy and customer service is another. What doesn't work? Management put a mandatory customer service requirement into PARS last year. No genuine guidance, training or support to implement was provided.	Hire more staff and less contractors. Agency still has too many layers of bureaucracy vertically and horizontally for a small agency of 15,000 despite agency streamlining done under both Bush and Obama. Some states experimented with one stop shop (multi-media) regulatory approaches that worked for a while however once the vested interests and the politicians got what they wanted many disappeared, Some dissolved because there was no program focus or ability to manage such a variety of different technical and subject matter disciplines. Ironically (considering it is on the chopping block) the	Do what IBM did, buy Apple computer products. Saves tons of money, reduces the IT staff size and huge service contract dollars (which can be redeployed to more staff and contract dollars towards the actual mission of EPA). Also dramatically improves worker productivity; enhances security; makes conferences, video teleconferencing, travel, teleworking and office scheduling easier while helps reduce environmental and actual office space footprint with a better integrated platform for work, research and internet based work, especially with iPhones being the primary mobile communication device. Numerous articles on this, just one can be found here: http://www.computerworld.com/article/2998315/apple-	Department of Commerce (DOC) has a legislative mandate in RCRA that they have ignored for decades to work with EPA and others on recycling market development. Need to resurrect this interagency effort along with the great opportunities to beneficially use, recycle and market large commercial and industrial wastes into new products. Re-establish the interagency group with Department of Transportation, National Highway Administration, numerous research groups and DOC business centers of excellence, NIST and EPA industrial commodities,
1356	1355	5/23/2017	Employees (I have counted at least 24 that I am aware of, there are probably many more, in our office alone that are trying to initiate Requisitions in EAS without adequate training or instructions. They have no idea how their inputs influence the outputs that EAS is required to provide up the approval chain and to reporting documents. This results in approval personnel, and contracting receiving PRs that are too vague, too technical, or with old market research attached, or recycled from old PRs with incorrect model and serial numbers that have to be verified by the contracting staff. I have addressed my ideas for solving this problem in Q. 5.		Keep communication open and transparent as possible.	Develop and maintain the Category Management initiative. This may drastically reduce cost and time required to procure goods and services that are redundant.	I have been tasked by my Manager to be the lead on an Acquisition Planning Initiative. So far, I have met with many Stakeholders. Some initiate Procurement Requisitions in the EAS system, Finance, and others in the acquisition approval chain to determine what unique issues and bottleneck/pinch points there may be in the process of getting a Requisition from discussion to Award. Many initiators only perform this activity sporadically (1-3X/year), many do not have appropriate training, most available training is cumbersome to access, time consuming to do, and for most of these Stakeholders, PRs are not their primary responsibility, so buy-in to participate in self-paced online training is not

1355	There have been numerous waves of process changes over time with a majority taking 18-24 months to train and implement and a life cycle of another 24 months before they fade or exchanged for the next fad. Need to assess how successful they have been and if they fit the nature of the agency. The best practice is to treat people fairly and appropriately. Accountability means less high paid contractors, more streamlined management and actions tied to outcomes.
1356	Yes, **[REDACTED B6]** has developed some solutions that address issues he has experienced over the years. He has some significant improvements with his Human Capital Plan and other Plans he has codified. You should review them. They are brilliant. He is also very keen on Category Management and has encouraged us to take initiative to work in this direction with such things as IT service and maintenance agreements. **[REDACTED B6]** is also a good lead on this.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1357	1356	5/23/2017	Grant process can be streamlined and improved.	While I think it is necessary to streamline and improve grant processes, maintaining accountability is absolutely necessary. This should be accomplished by regular and systematic oversight by project officers, managers and technical staff. These interactions should not just be to ensure that work is being completed and timely, but to provide technical support or ideas for improvement.	- Maintaining current and relevant information on websites that has contact information so people have someone live to talk to if they have questions. - Maintain customer service standards, i.e. require response within a certain time frame and follow u	Consider streamlining organizations that are involved with grants.		
1358	1357	5/23/2017		Provide sufficient funding and staffing to the agency so that we have the time and resources to coordinate with stakeholders.	Again, this is largely related to funding. If we are under-funded, I have to tell people that I can't perform work at sites because we don't have adequate budget. Our customers do not want to hear that we can't protect human health and the environment because we don't have funding.	I think that the per diem travel stipend is ridiculous. People always end up making money off of work travel. You should be allowed to spend up to the per diem rate and be fully reimbursed. If you don't spend the full per diem, you should not get to pocket the difference between what you spent and what the rate is. Cutting off this expense has no impact on environmental protection at all.	Yes - there are multiple computer/IT upgrades that would make us more efficient and relevant in the science and engineering field. We often have to contract functions out because we don't have the budget to purchase software, printers, plotters, etc. to produce our own work products. Paying contractors fees greatly increases the cost of doing our jobs.	

AMERICAN OVERSIGHT

	I
1357	Yes. Developing work plan templates for grantees to follow depending on the grant programs. Many of the air grant programs that I work with have developed work plan and reporting templates. These have resulted in more complete work plans and reports.

1359	1358	5/23/2017	1. Administrative work should be done by administrative staff, not the scientists/engineers/economists/etc that work for EPA. In my experience the Admin Assistants could be doing much more to support the managers and their staff... generally the admin assistant responsibilities are limited and very inconsistent from one branch/division to another. it really depends on the individual. for example, some admin assistants will actively manage the branch chief's calendar, answer their phone if they aren't in the office, etc. but that is very inconsistent and most managers don't ask their assistants to do this. Some of the older admins were traditional secretaries and took on many responsibilities you would expect (managing calendars, printing/copying, filing, etc.) the current role is more like a coordination role than providing actual administrative support. 2. Travel - most employees have to submit their own travel requests and vouchers - it is extremely time	I think we already do very well partnering with states and provide a high level of service considering our limited budget and small staff. We could be even better if our staff were trained on & had access to the latest softwares (project management software, graph design and report writing, publication softwares, etc.), had tablets for portable work, and had less administrative responsibilities slowing us down.			Managers should be trained in Project management and use the software, gantt charts etc to manage the work of their units. Staff should have agency-issued phones and tablets for meetings and other portable work.	We already do this quite well.
1360	1359	5/23/2017		Working collaboratively with other federal agencies and our state and local partners on the solutions they are seeking, through technical assistance that responds to their needs.	Encourage (and facilitate as requested/necessary) collaboration among the groups listed.		Community engagement techniques-- not necessarily "technology"-- will be critical as many environmental challenges require meaningful engagement with community members.	We can reach more communities, help communities, states, tribes, and other groups achieve their environmental and public health goals, when we work with other federal agencies to ensure that we are delivering critical services to these groups that help address their unique environmental challenges and assets. While we have shared goals and responsibility, EPA plays a key role, as do other agencies, in the federal family. We can all accomplish more if we continue to work with our federal partners.

1361	1360	5/23/2017	Knowing that the Administrator's Office will support the scientifically sound assessments and recommendations of its Offices.	Don't cut the programs that are doing great work in coordinating cooperation among the states and providing massive service to the people of this country and their environment. One example is the Chesapeake Bay Program.	Let the scientists in the Program offices do their jobs and trust that their knowledge and expertise is being used to develop the proposals and recommendations that will be best for human health and the environment.			
1362	1361	5/23/2017	The contracts process is inefficient. This is because the Contracts Office personnel often don't operate with a culture of customer service to the program offices. They delay in performing their duties and often require redundant work tasks. To address these I would institute processes that make personnel more accountability to the program offices they support.	Provide as much technical information and materials that states, locals, and tribes can use to conduct their environmental activities. Don't censor which kind of information they receive. For example, taking down the climate change website hinders many of EPA's partners from working toward their goals of reducing greenhouse gases. By doing this, EPA prevents itself from fulfilling its "back to basics" mission of protecting human health and the environment.	Provide as much technical information and materials that states, locals, and tribes can use to conduct their environmental activities. Don't censor which kind of information they receive. For example, taking down the climate change website hinders many of EPA's partners (particularly state and local governments) from working toward their goals of reducing greenhouse gases. By doing this, EPA prevents itself from fulfilling its "back to basics" mission of protecting human health and the environment.	Provide training to managers of administrative and support departments (contracts, grants, facilities) around accountability to their mission. These departments have a mission to support the program offices, and when they don't act with accountability to this mission it causes the waste of Agency resources.	I'm not a technology expert so don't have anything to contribute here.	The Supreme Court has ruled that greenhouse gases constitute an endangerment to human health and the environment. This makes it a legal requirement for EPA to reduce these pollutants. The voluntary programs that the Agency has established over the years related to climate change are a cost-effective way to do this. They don't require enforcement or extensive reporting/tracking processes. And most importantly, because reducing greenhouse gases is a shared responsibility and mutual interest between EPA and the 50 states, the technical and informational support

1363	1362	5/23/2017		More focus on community based programs that work is a way to achieve better environmental results. This may be bolstered by proving more grant opportunities in these communities related to the Agency priority areas.		I think that children's environmental health and environmental justice should be a component in all program areas. Currently, the Office of Children's Health Protection and the Office of Environmental Justice is tasked with ensuring that all of our program offices consider children/disadvantaged communities and their distinct vulnerabilities in the way they work. I believe that what would be a better option is to have a small staff located in each program office dedicated to coordinating that work for each respective program area. It doesn't seem useful to have two entire fully staffed offices, with limited capabilities perform such work.	Our computer technologies across the Agency are archaic. We should all be scanning and faxing documents directly from our work stations. This would cut down on the need for extra scanners and fax machines. Updated technology is a must-have in this world of changing priorities and highly visible activities.	
1364	1363	5/23/2017				I think we'd save a ton of money if we no longer used contracts for purchasing and maintaining the laptops used by most employees. I realize the cost includes support, but employees provided that support before and they can do it again.		
1365	1364	5/23/2017	There are no administrative requirements, management procedures, or other organizational processes that prevent me from doing my job efficiently and effectively. The ones in place are necessary!	Pushing the job of environmental regulation to the states, tribes, local communities, or the private sector will be futile. They don't have the resources to carry out environmental protection as effectively as the US EPA.	See my answer to Q. 2	I do not think that cutting the EPA budget by 30% will maintain environmental protection for all Americans.	Updating and/or eliminating redundant databases, e.g Oil Database and/or ICIS.

1365	

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1366	1365	5/23/2017	I have presented to the local process improvement staff requirements, and procedures, for analysis and recommendation of a work flow that will improve and assure the work product is current at all times (i.e., delegations). The final product is being conveyed to POCs for continuity of a standard process for use at all times, whether the end product is new or being revised. I also presented a POC subject matter directory for review and determination of a better format and easier to use as a reference -- once again assuring it is up to date at the moment, rather than 3 or more moths out of date and it will be readily available in an automated format by use by all employees/staff.	It begins with communication and sharing with all our customers on a continual basis. Once a year would not be considered "partnering." Develop a timely schedule for partnering.	Once again, communication leads the way.	I have been sharing -- from an administrative viewpoint -- where I believe time will be saved for those putting products together and also by those utilizing the resource. Process Improvement Workgroups -- team work toward getting more done faster.	I have presented my suggestions for process improvement; the IT folks, as a part of the team, will analyze what direction to go in obtaining IT efficiencies, effectiveness and accountability.	We offer opportunity for outside agencies to use our conference room space, when there is availability. Positive comments on accommodations have been received.
1367	1366	5/23/2017	A great impediment agency-wide for supervisors and employees is our agency using different systems (that are not directly compatible) for generating timecards/Pay. OCFO retained the outdated PeoplePlus system, rather than join in the IBC system which has a timekeeping component (and would seamlessly interface with HR actions). The agency made a mistake in not having OCFO come on board with a modern HR/pay system that was inclusive of timecards when the current HR system was implemented in July, 2015. Often, the HR offices/SSCs are improperly blamed or believed to be the cause for "pay" issues, when in fact there are issues with interface and the PeoplePlus system is outdated/does not have current codes needed to effect certain leave/pay entitlements -- for example, Wounded Warrior Leave -- OCFO has a "workaround" to charge admin. leave because PPL does not have the correct codes for this benefit. I would recommend that the highest	From my perspective, the agency is missing out on perpetuating and increasing these results due to no longer having an agency established succession planning program for positions/professionals engaged in this activity. Region 10 and 9 have the highest levels of tribal activity -- recommend that a former hiring/succession planning program (the former Environmental Internal Program) be revitalized within the agency under the newer hiring authorities of Pathways Intern (without NTE) and/or Recent Grads appointing authorities, as well as Sched. A, Veteran's. For any positions being considered under VERA/VSIP or restructuring, designate funding and positions at entry level to enable new positions/workforce groomed under the experienced, sage professionals of our agency -- perhaps even in combination with	Well managed town hall meetings -- also see #2 response.	Restructure and reduce number of Regions to Centers of Excellence on various Environmental programs that the agency determines -- rather than Regional coverage by state assignments. Prevent another FLINT -- too many programs for oversight within a region may open door for lack of attention -- recommend that EPA establish a Center of Excellence Region for Water (also leverages simplified partnership/interaction with national program office, Office of Water in DC); create a Center of Excellence Region for Air programs, Center of Excellence Region for OPPTS, etc. Reduce the agency footprint in highest cost/highest retention rate locations to agency for space, for example, salary	A comprehensive HR/Pay System that is used by both OCFO and HR, employees/supervisors in agency for payroll/timekeeping (rather than two separate, incompatible systems we now have in PeoplePlus (OCFO) and IBC system (OARM) Ensure the systems are also compatible for electronic signatures. Also, implement an automated performance management system, employee accomplishments, supervisor comments, performance ratings to be done electronically (such as previously implemented by Dept. of Energy) which also interfaces with eOPF -- eliminate the PAPER in every way possible -- we are the EPA, afterall.	See Q. 4

	A	B	C	D	E	F	G	H
1368	1367	5/23/2017	There are so many things that get in the way of the job. In my Region, many groups are broken down with too many layers of management. In my own group, a Branch of 25 people, there are two team leaders that have 5 and 6 federal employees on their respective teams. There is also a Section chief, that has 5 members in her section. There is a Branch Chief, and above him, a Division Director. Any missives to the staff from the Division Director go to the Branch chiefs, then to Section and Team leaders. On a good week these things pass down in a few days, on a bad week ? The staff gets the news 2 - 3 weeks later. Some teams in this region have more members than my Branch, some divisions have less employees than some branches in other divisions. Back in 2013, the Region advertised the availability of 50-60 VERA/VSIP offers, I think between 27 and 30 were taken advantage of. 12 satellite positions were eliminated, but all but 3 of these personnel were retained. The Region promised delayering and restructuring.	I am a proponent of old fashioned meeting face to face with these groups. Having a face for the agency or region, working with the group to see what we can do to help them goes a long way with having them provide us with data or referrals. Most people don't want to do this step and claim they are too busy. They are not too busy to send out a strongly worded letter to try and compel cooperation.	Again, it has to be face to face meeting with people. One on one in the offices, public meetings, after hours get togethers on their turf to get to know the community is the best way. Unfortunately, the beaurocracy and paperwork have overtaken us at the offices. No one had time to reach out, we are too busy filing our papers and covering our butts.	There are probably countless ways to improve EPA. As unpopular as my first suggestion would be, I would recommend overhauling the personnel practices that are in place. In my region, we have many senior employees that are over 70 years old. One or two might be spry or articulate enough to justify this, but there are many of them. Some cannot use their email effectively, some are not able to move with the ever changing computer and business training we are required to take. While they might be nice people, I question the health of their attitudes. Some of our older employees have made this "job" their second home. They have friends, coffee pots, and muddle through their day. I understand	I am sure there are computer and other technologies that would make our business lives more efficient, and would have the added benefit of accountability. I do not know of any specific things to suggest. I know there are things already in house that people just don't use. It takes me 2 weeks to get a form letter sent because I have to put it through two layers of concurrence and it needs to get passed around physically. There is edit software we have that could do this through email, and I could just print it out at the end and mail it. Still my office wants three paper copies for secretaries to file. Some of my letters come from a function in a database through our headquarters office. These letters are	The data in your question answers it, yes, but realigning activities of shared responsibility or agencies and states, more would get done. See my other questions for this, particularly question 4. I do believe that pulling similar or same responsibilities from within agencies and across agencies is a good idea. The problem with the current mood or climate is that the goal is to get it done yesterday. These agencies evolved over decades and decades. Tearing them down in a year is not going to work. The result will be chaos. Stretch the timeframe a bit, and get a real handle
1369	1368	5/23/2017		See answer to Q. 4.	See answer to Q. 4.	Yes. Over the past 30 years, agency data on regulated facilities have been highly fragmented and incomplete. EPA and each state environmental agency???as well as each program office (such as air, water, and waste) within those agencies???separately collect, record, and maintain both the specific data needed for each set of regulations and the core information to identify each facility by name, address, geographic location, owner, etc. As a result, regulated facilities have to report and update the same basic identification data to multiple agency programs, at multiple levels of government, and at multiple times over and over again	See answer to Q. 4.	See answer to Q. 4.

1370	1369	5/23/2017	I am a Fellow with the EPA. My mentor, a federal employee with the EPA, is a scientist and major project lead for the EPA. A few years ago, the EPA had budget cuts that got rid of the administrative assistants for the project leads and head scientists. This meant that the project leads and head scientists were forced to be in charge of their own HR if they have Fellows. My mentor is a scientist, not an HR professional, however, he/she is now required to conduct all of the administrative responsibilities for myself and the other Fellows under his/her guidance. This is a huge waste of his/her time, talents, and skills as a scientist. He/she has to spend too much time on administrative work and loses valuable hours that could be better spent accomplishing what the EPA is supposed to accomplish: science research that protects human health.					
1371	1370	5/23/2017	This applies to internal rules that hamper our ability to produce certain communication pieces at low- to- no cost. In the past, program offices wanting to produce a cellphone video -- to show a brief interview with an expert, or include a video with a blog post -- have been prevented from doing so by internal requirements. Instead, the offices have been required to use a contractor to or use the Office of Public Affairs multimedia team (which the program offices have to then pay). That policy feels extremely out of date given the tools available to us today. True, there are certain times, when communicating Administration priorities demands a higher-quality video production with all of the capabilities a studio brings. But there are other times, when lower-cost materials (like a cellphone video) would be fine. And depending on the audience, the lower-cost materials might be preferable. Why are we making it harder to use modern tools? I would address that with a tiered policy that allows certain types of		I'd love to see all incoming employees have to take some training on customer service. Some of my favorite days are the days when I get a call from a citizen who has actually been misdirected, and I can help that person find the answers they are seeking -- even if it means calling another agency to put them in contact with the appropriate person. I do this in part because of a background in retail, but also because these are the people we are working for. We should help them. So many EPA dedicated EPA employees are indeed helping our citizens through the public health protections that results from our work. But I'd love to see more people take more time trying to help individuals who are trying to navigate a large, unfamiliar bureaucracy.		Allow use of additional data platforms, which may give us additional analysis tools to identify areas that may need attention.

1372	1371	5/23/2017	Admin requirements: Not being able to change travel arrangements. E.g., a trip being able to be cut short that is tied to a plane ticket cannot easily be changed, even if it means saving money on hotel stays. Management: Excessive sign-off procedures. They usually just end up being grammar focused rather than content focused. Organizational: Too many middle managers. Branch Chiefs seem unnecessary. Section chiefs do most of the work and get less pay.	State programs are far too lenient with cleanups and establishing cleanup goals and standards.	More outreach to communities, including information sessions and career days at schools and universities.	Rather than spending money YOY on contractors for items like environmental modeling, EPA can spend that money once and train up it's staff to be able to do it themselves. The old generation is not always able to adapt, but the young generation is willing and able.	Cloud computing, changing rules and regulations regarding letterhead to cut back on printing and mailing correspondence.	States should have something similar to "call before you dig" rules with things like institutional controls at contaminated and formerly contaminated sites. As land gets sold, paper trails can get lost and irresponsible land use can lead to exposure if environmental covenants and institutional controls don't have uniform enforcement mechanisms outside of federal and state EPA agencies.
1373	1372	5/23/2017						

AMERICAN OVERSIGHT

	I
1372	Formally encourage licensing, such as professional engineer, professional geologist. It is encourage informally, but there is no established benefit provided by the agency to those who obtain licensure.
1373	It would be difficult to identify an organization that has improved efficiency and reduced costs more than EPA has in the last 25+ years. From 1990 to 2012, we saw a significant population increase in our country. We saw a power demand increase and power usage increase in our country of some 30 percent. We saw our real GDP more than double at the same time that we reduced our criteria pollutants in air quality by over 60 percent. The agency???s spending under the previous Administration was cut between 10 and 20 percent below the budgets of the previous three administrations, when adjusted for inflation. The agency???s budget averaged about $8.8 billion

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1374	1373	5/23/2017						Have intern programs (ORISE, Pathways) ALL have a path to federal employment (or ALL no path). Many interns have long tenure in one program (indicating commitment), but no path while some short-term (e.g., a single summer term) interns do.
1375	1374	5/23/2017	There are very few administrative requirements, management procedures, or organizational processes that prevent me from doing my job efficiently and effectively. Some are annoying, such as the numerous trainings we have to take each year, but those take minimal time and don't really impact my work much (not any more than participating in this survey, at any rate). it would be nice to have administrative assistants to assist with mailing, filing, etc. (and trained consistently), but after about 2 decades without, it's just a part of the job.	This is a broad and far reaching question that differs from program to program, and from project to project. However, I have found that, for most projects, to engage with states/tribes and stakeholders early on in the process yields the best results. When all parties are educated on what the issues are, for everyone, and have a say in the outcome, it saves time and prevents misunderstandings. This is not always possible due to lack of adequate staff resources, travel resources, and time.	It is important to engage with all parties to learn what all the issues are and to agree on an outcome - face-to-face, with presentations and plenty of time for questions and discussion. Again, this requires adequate staffing and travel budgets.	"Untapped opportunities"? To reduce costs and inefficiencies? I'm pretty sure we already operate on a very tight budget. I know that I have enough work for 5 people and I struggle to make deadlines because of the number of projects I have. I see my colleagues doing the same. I suppose, however, if I were to try to reduce costs and inefficiencies, I'd reduce the number of management positions (especially middle management - that level seems to be redundant and yet noisy - keep the Director and immediate Supervisory positions), and increase staff and administrative assistants.	There may be new technologies that could be adopted or existing processes that could be modernized to make us more efficient and effective (as far as I know, we're very accountable!!), but I'm so busy working I haven't had the opportunity to see what else is out there. It would be nice if EPA could afford to hire cutting edge IT people - we do often seem to have issues with our computer technology. Other than that, I'm fairly comfortable with the technological resources available to me at EPA.	This is an interesting question that has many different answers from each EPA office and Region, I'm sure. In my experience, however, it would be a good idea to have a close look at BLM and ACOE and how their activities impact EPAs activities (and vice versa). The States in our Region generally work closely with us and rely on EPA for technical guidance and support for their work.
1376	1375	5/23/2017	The current administrator wants to cuts 25% or more of us why are you even asking us this?	Fund the agency at a level needed to do our full jobs	Provides us the technical and electronic and equipment needs to do our jobs properly	Yes. Cut government funded golf vacations to Florida for all employees and require that where available administration and spouses stay in free government housing (White House and use free government facilities for meeting - Camp David)	Provide employees with up to date computers, monitors, cell phones, and technology.	

AMERICAN OVERSIGHT

	I
1374	
1375	I believe that EPA is fairly adept at reducing waste, thus cost, and is fairly accountable already (though I've heard a few stories, they are only a few and I would wager that of all the Agencies, EPA stands out as efficient, effective, and accountable). We can always do more, however. The use of "virtual technology" should be more available and updated. Virtual meetings help minimize travel expenses. Personal contact should not be completely eliminated, but could be reduced more at EPA.
1376	

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1377	1376	5/23/2017	Funding grants through IGMS can be awkward. Improve the system so the workflow is more obvious and also allow for alternates. In the event, a key person in the funding process is absent, allow for a backup person to be delegated the responsibilities.	Better environmental results can be achieved by hearing what communities need to protect environment and public health. The Community Action for Renewed Environment (CARE) Community Resource Guide is helpful for communities. Communities help each other, and EPA in the regions can guide this empowerment. https://www.epa.gov/sites/production/files/2015-04/documents/care_resource_guide.pdf Review evidence gathered by EPA on chlorpyrifos and reconsider decision to protect children; neurotoxin like lead.	Regional offices can and do provide names of people who can answer questions in various areas of concern. EPA can have connections with the states, tribes, local communities, who meet on regular basis and work toward common goals.	Allow more telework and "hoteling" or shared workspace. The commute continues to be challenging in DC and other locations. It is possible to be more productive when 4+ hours of commuting/day is avoided.	Link training and educational courses to employee's record, and have some system that acknowledges or credits continuing education with professional development and achievements.	The Centers for Disease Control and Prevention (https://www.cdc.gov/) is often on the scene for environmental public health issues like lead in drinking water in Flint, Michigan. Information for the public should be coming from one source so the public does not need to go to multiple locations. In the past, OEI has had a cooperative agreement with EPA that involves the sharing of information. from EPA website some good information for communities also https://www.epa.gov/communityhealth
1378	1377	5/23/2017	There are regulations on electronic reporting associated with the Cromerr rules that prevent us from receiving lab reports via email. This is outdated, as in today's world, correspondence, including official reports, are generally sent via email, and should be accepted the same way as faxes and paper mail. Many offices are currently ignoring this regulations, and it conflicts with the Paper Reduction Act.	Constant dialogue and communication, absolute transparency, emphasis on our common goals, and data sharing. Data sharing, especially in drinking water, needs to be modernized and streamlined. Currently, the way data is shared from States to Fed in SDWIS in inefficient and occupies human resources to navigate the process. Also, Tribal data is still being entered manually in many cases, due to lack of electronic reporting availability, use or easy access.	We need to be accessible, available, transparent and prepared with facts and data. We must be able to explain complex concepts and regulations to the public, and be willing to take the time to do so.	Reduce paperwork and associated filing. Most documents can be saved electronically, which also saves time from physically managing and organizing paper files. Hire younger staff with technical backgrounds, so that new ideas infiltrate the agency, while the experienced generation passes on invaluable knowledge prior to retiring. It is essential to have employees at EPA with science and engineering backgrounds, and this also minimizes the need for management positions. More age diversity at the agency would be beneficial for creativity and also reduce payroll costs.	Firewall security requirements at EPA prevent outside parties from accessing drinking water data. Since we contract out significant functions, these contractors require access to our databases. The States are able to do this, and so should we, as it adds to the transparency and data sharing of our agency.	Cooperative or Inter-agency Agreements are great for partnerships. Again, make sure we are communicating regularly and sharing data. Collaborating on local studies or research would also be valuable.

AMERICAN OVERSIGHT

	I
1377	https://www.cdc.gov/nceh/tracking/ National Environmental Public Health Tracking Program at CDC, uses EPA data like air monitoring to link environment and health data.
1378	There are many innovative technologies and methods for each program, and they often lead back to data sharing. I believe open, accessible data is an important tool for decision-making, rule implementation and efficiency. Some examples of best practices that are standardized inspection report templates, inspector credential guidelines, electronic reporting to SDWIS.

1379	1378	5/23/2017	Further delegations of authority would help staff do their respective jobs more efficiently & effectively. While there were a number of delegations over a decade ago in Region 2, the amount of time it takes to finalize certain documents is, at times, a source of frustration for staff. At least in my program, there are far too many staff and management that currently need to review certain documents just because upper management needs to be the signatory of the document under the current regional delegations. Our delegations should be reviewed and the authority to sign-off on certain documents should be delegated further down the chain. For example, in our region, Superfund (CERCLA) 104(e) Information request letters should be re-delegated to the site attorneys; other regions have done so and as these requests do not bind the region to anything, there is no reason they could not be delegated down to site attorneys in all regions. Routine oversight bills, Notice/Demand letters, etc. are other	I think we have made great strides in the superfund program with that. However, better integration and dovetailing of the Superfund Redevelopment Initiatives and similar brownfield/redevelopment initiatives with the Superfund cleanup program would be helpful. Staff needs to be better educated on how the programs can work together and what tools (Reuse assessment funds, MOAs, BFPP agreements, grants, etc.) are available to staff and outside parties to achieve a proper cleanup and to allow the sites to be put back into reuse as soon as possible (given site conditions). We work very hard to get certain properties cleaned up and for everyone???s sake, especially the state and local governments, we want to see those sites put back into productive use.	FOIA response and Litigation Support is desperately needed. A well-trained, tech-savvy and properly managed staff of paralegals or other professionals to assist staff in preparing FOIA responses and preparing for litigation would be of great help. In preparing a FOIA response or preparing for litigation, EPA staff often has to find, organize, review and scan 1000???s of pages of documents. And then there is the herculean task of managing the electronic files. Both FOIA requests and e-Discovery (in particular), are a huge drain on resources. FOIA requests could be processed more quickly and discovery efforts could proceed at a more advantageous pace for everyone if we had more resources to assist staff on those fronts. Note: The somewhat recent addition of the online FOIA system has been a tremendous help. Streamlining certain documents / LEAN Process Various settlement, information	All Regions should implement a ???Maxiflex??? schedule The flexible schedules, alternative work locations and the 4/10 schedules have done a lot to increase productivity within the agency over the past decade. However, we should implement a Maxiflex schedule option in all regions which would better accommodate the schedules staff works, improve morale and save the agency money. The Maxiflex schedule essentially allows an employee to work his/her 80 hour pay period with a considerable degree of flexibility. This flexibility will help EPA be more agile and efficient and probably reduce the need for overtime (at times, although given the issues EPA	R2 should implement an Electronic Concurrence System Documents are 'lost' for periods of time in concurrence. If everyone can view where the hold-up is, that would be very helpful in getting documents out the door in a timely manner. I believe some regions and/or divisions within certain regions have already done this. R2 could also use more high-speed scanning capabilities. The more documents we can scan and store electronically, the less storage space we need in physical offices. RCRA Electronic manifest system should be implemented. There was a bipartisan push to get this system implemented and plenty of back-up information on how much	See above re: the RCRA Electronic manifest system. I???m sure this would greatly benefit the states and EPA. Closing regional offices and essentially cutting off the in-person meetings and dialogue between EPA and its state counterparts will only hurt our ability to work with our governmental counterparts and achieve our shared goals.
1380	1379	5/23/2017	I'm mostly able to do my job, but "efficiencies" like centralizing much of HR in places like Cincinnati (hundreds of miles and a time zone away) has made my job harder. I suggest looking at the GAO's 2017 annual report. Rather than targeting the Agency with a 30+% resource reduction, follow the GAO's recommendations. Having said that, our country's disinvestments in infrastructure in recent decades have contributed to situations like Flint and sink holes in places like Mar a Lago. we need to be able to strengthen our already-pretty good relationships with other agencies like Army Corps, local water authorities to minimize/prevent Flints, sink holes whose issues are largely due to our ever-weakening infrastructure	Cutting personnel, travel, grant and contract dollars will not help in this area, in fact, quite the opposite. We've had the greatest success when we can interact face-to-face (requires travel dollars), when we can offer requests for proposals from our partners to advance environmental results (requires grant dollars), when we can help support their environmental programs with monetary and technical assistance (requires robust STAG and contract dollars), especially important when state budgets are shrinking to nonsustainable levels	The cuts to our workforce and funds over the past 15 years or more have taxed our ability to provide effective customer service (see also response to Q2 above). More and more we are becoming the "environmental clean-up agency." We seem to be supporting emergency clean-up at the expense of "protection," i.e., working to prevent the clean-ups from ever happening i.e., saving millions of dollars. And yet, with every Flint, the prevention programs, already stretched thin, need to provide support to the clean-up programs. Sustainable resources are needed for compliance and technical assistance. Meanwhile, state and federal environmental protection budgets are being cut to unsustainable levels. We also need to be able to reassure states, tribes, local communities and the public at large that they will have the same access to EPA senior management -- thus ensuring clean water, land, and air -- that the regulated community	Follow the recommendations for EPA in the GAO's annual report. Over the past 7 years, the annual reports have resulted in $75 billions worth in savings (per Sen. Ron Johnson, R-WI). EPA has followed 16 of 17 recommendations since 2011, the report's first year. Meanwhile, DOD has only followed 61 out of 95. Maybe start with DOD with this exercise, since EPA has been doing pretty well. Having said that, what EPA needs to do better is succession planning and institutional memory retention. It does us no good with our diminishing resources to have to reinvent and rediscover policies and practices that went out the door with our valued retired colleagues. It	EPA has always made a good effort to stay state-of-the-art, but has always lagged behind those agencies with more robust and sustainable budgets (e.g., DOD). Cutting EPA's budget by a third, on top of budget cuts in recent years, will not allow us to be trained on and adopt new technologies, both of which are not free.	If states continue to cut their environmental programs and the Federal government continues to cut the EPA, especially with respect to STAG funds, it's hard to answer that question. We have good working relationships with our states who rely on us for grants, technical assistance, problem-solving, being the "gorilla in the closet," providing national consistency, etc. The current challenge for EPA is not being in a situation in which we're asked to actually perform the functions of authorized states because they no longer have the resources to perform them themselves.

1381	1380	5/23/2017	Our administrative systems and support is sorely lacking- HR, personnel, travel management etc. These systems are often subpar and it is time consuming to take care of these basic support functions. THe PARS system is inefficient as well and makes it difficult to hold employees accountable. A Pass Fail system would be better, albeit imperfect as well.I	We need face to face meetings. If the travel budget doesn't allow for this for relationship building, we need to invest in state of the art communication and videoconferencing systems.I				
1382	1381	5/23/2017	1.Reporting on Strategic Plan Measures significantly prevents me from doing my job effectively. While I understand the importance of measuring progress (or identifying a lack there of), many of the measures that my program reports on do not provide an accurate picture of the work being done by EPA or the states. These measures require us to provide annual targets, which we often have no control over, and then we are expected to explain at the end of the year why the results are not what we predicted 12-18 months prior. In addition, many numbers are aggregated at the regional level, so achievements or deficiencies at the state level are not shown and acted on appropriately. These measures develop into a real problem when states and regions become more focused on getting measure credit ("counting the bean") than achieving real results. Time that could be spent solving problems is spent figuring out how to game the system because these measures are tied to the budget, bonuses and PARS ratings.	2.In order to achieve better results with our partners, we need to be communicating and collaborating on every level. EPA staff and management in the regions have to cultivate relationships with our partners in order to build the trust that will support collaboration. Our state agencies share our goal and mission. Communities share our goal and mission. Even the private sector supports our goal and mission, when we can help show support to their bottom line. To achieve results, we have to be strategic, focused and together. One of the barriers to this is the culture of a regulation agency (???I???m your regulator, not your friend!??Â); however, it is to our benefit to work together with those we regulate to find the best solution. For example, it isn???t enough to just ask states to devise plans to reduce nutrient pollution in streams and then	President Obama had great ideas about transparency in government. We can provide better customer service by presenting our decisions to our partners and the public in plain language, for their review and consideration. We can provide better service by sticking to what we do best -- science. Our mission is to protect human health and the environment. Not grow business. Not provide jobs. The American people want us to protect water and air. They want us to combat the VERY REAL effects of climate change. We can provide better customer service by giving the people what they want.		Of course there are lots of new technologies out there, but with 80% of employees over 40, staff will be slow to pick up new processes and will need training. Training will cost a lot of money because we'll need to bring in an outside contractor to put together materials or come to the regions. The Regions are all understaffed and busy, so no one will have time to come to the training. Three years after deployment, the technology will be updated or maybe even outdated. The staff never learned how to use version 1.0, so they can't catch on to 2.0. IDEA: Allow the regions to hire more people. New younger staff will bring their technology skills from college, older staff from their previous jobs. The	Collaborative partnerships that focus efforts together already do this on a micro scale without formal realignment. In order to do this on a macro scale, consideration needs to be given to the regulations that agencies work under and their requirements. Some realignment may be done through changes to regulation, but this doesn't mean we should start pulling back regulations and requirements - just considering them differently based on the knowledge gained since they were enacted. Pulling EPA funds, especially for geographically based initiatives, does NOT

1383	1382	5/23/2017	There???s not enough expert staff dedicated to managing grants to states and localities. My education, training, and experiences are as a scientist, engineer, and researcher ??? not the effective management of funds allocated to states, localities, academics, etc. Having grant specialists do the work of that profession ensures the most cost-effective use of public money. Related to this, there should be no need in this day and age to maintain paper records for cooperative agreements and grants.	EPA needs to take on more authority to quickly and effectively intervene where there???s negligence on the part of state and local public institutions in addressing gross violations of environmental laws and regulations. The public and businesses should not have to suffer the consequences of mismanagement and under-funding of state and local environmental protection programs.	EPA needs to better fund state and local programs that protect human health and the full food web ??? and the many businesses that rely on clean water, air and land. EPA needs to staff up with expertise in managing funds to states, tribes and local communities to ensure funds are spent in more cost-effective manners = greater protections to environments at lower costs.	Greater scrutiny of how federal money is spent by states, tribes, local communities, etc. EPA needs more oversight to ensure federal funds are targeted to where there???s going to be the best bang for the buck. EPA needs to take over state and local programs where federal money is allocated ??? that are not meeting expectations. In some cases, state and local programs are simply dysfunctional because state and local contributions and cost-share have been gutted and/or are being mismanaged. EPA needs to staff up to provide technical and financial support to businesses and the public to fully restore degraded ecosystems and reduce	Cloud computing throughout the agency for scientific investigations, environmental modeling, risk assessments, etc.	USDA should better fund nonpoint source programs since costs of remediation in the agriculture sector are typically not shared among a large base of rate payers for electricity, water and wastewater, etc. The economic and health benefits of pollution controls in the agriculture sector are immense and should be quantified.
1384	1383	5/23/2017				Start hiring senior enlisted and at least company grade officer veterans. EPA is second to last across the board on veterans AND it becomes obvious the "service to a greater good" attitude appears less than it should be for such an influential and needed Agency. These are two directly related cause and effect issues. And put a VETERAN in the Agency's Veteran Coordinator. https://www.fedshirevets.gov/hire/hrp/reports/EmploymentOfVets-FY15.pdf

1387	1386	5/23/2017	The timecard process could be more efficient. We currently have to complete our timecards before the end of the pay period; therefore, one has to go back and amend one's timecard if a change of schedule (i.e., travel is delayed, get sick, etc.) occurs after one submits their timecard. This could be addressed by having employees complete their timecard after the pay period ends. Meetings could be more efficient. The standard meeting time is one hour, but most meetings could be accomplished in 30 or 45 minutes.	Local municipalities and community organizations know their communities best. We could support better results by providing more grant opportunities to local municipalities and community organizations.	Some staff and managers are better at providing good customer service than others. Providing customer service guidance or training to all Agency employees could address this. In addition, employees should consider their colleagues as customers as well and provide prompt responses to questions from external associates as well as internal associates.	The EPA could develop partnerships with foundations that have resources and the desire to address environmental health issues in U.S. communities.	The database used for grants application processing and grants management could be modernized.	
1388	1387	5/23/2017						
1389	1388	5/23/2017	No response for this question.	Many environmental conversations led by EPA in the past are biased, one-sided or non-constructive (e.g. Bristol Bay ~2014-2016, mountaintop mining ~2012-2014, Clean Water Rule ~2013-ongoing). We should acknowledge this and foster mechanisms (online forum?) for creating constructive conversations across party lines, among all stakeholders, integrated with analytics and scenario planning tools (avoiding Facebook-type mechanisms, as they're not designed for this).	See response to Q 2.	Make other countries pull their weight for environmental research and regulations. International consortiums can be better leveraged to save resources. For example, some member countries of the OECD use the OECD essentially to do similar functions as EPA???s ORD. We could do more of that and save money. Also, EPA should be doing more to influence or coerce other countries to improve their environmental policies; pollution and profitable businesses do not respect national borders.	Much of EPA???s portfolio and budget are associated with information technology (this is true for environmental science across all sectors). However, EPA???s portfolio is not often documented like that because staff and managers describe their portfolio in terms of their expertise (often environmental science vocabulary) and because EPA staff are not normally advanced IT people (they're at Google). EPA???s IT products are generally lacking. We should confront this problem, which could save lots of money. Also see report "EPA Scientific Knowledge Management Assessment and Needs": https://cfpub.epa.gov/si/si_public_record_report.cfm?dirEntryId=332630	The US is fairly advanced in terms of the environment. One of the biggest differences we could make for the environment is by influencing the international community to be better. Also see response to Q 4.

1390	1389	5/23/2017	We have so many national and local unions with different agreements and rules. I appreciate the purpose of the union but it is difficult to make positive change with so many who have to be consulted and provide agreement.	Suggest looking at different ways to deliver funding to States. Do we need grant competitions? Can funds be allocated instead via formula based on need to meet the acceptable health or environmental standard or goal/objective? Could a pool of funding be set aside to distribute for general environmental projects to meet those needs? (Note: SF would probably need to be excluded because sites are prioritized and do not necessarily have a responsible party to fund.) Would this reduce administrative costs for EPA and our partners?			Reduce the number of interfaces needed between multiple administrative systems in order to make a payment. Consider placing major systems for grants, contracts, payroll, property, HR and associated policies in the same AAship as the financial system/policies.	E-Enterprise has great potential in this area.
1391	1390	5/23/2017	Over the decades the agency made hundreds of improvements that enable us to do a great job for the public and for the environment.	EPA worked and continues to work very hard and the employees are very respectful and diligent to our partners. As a result, the working relationship with have with states, communities, tribals and the private sector has enhanced our ability to be an outstanding agency.	I think we do it and do it extremely well.	Not at this time.	Not my field of expertise.	Actually, I think that aligning the EPA with Public Heath Agencies would be beneficial for the public. However, that would cause us to increase our work and workforce.

1392	1391	5/23/2017	1. Government Purchase cards. As a purchase card holder I regularly experience extreme frustration at the redundancy and ridiculous amount of steps needed to complete a simple purchase. As a scientist it's these administrative things greatly reduce the time that I can spend on research. To improve the problem I would suggest creating ONE system where we could record purchases, get approval and document purchases (receipts). The unified system would have to be faster (eliminate the 30 second lag between every execution) and allow users to record purchases from different vendors at one time. Having to keep electronic and paper records is a massive waste. Since I keep electronic records, at the end of the year I have to PRINT out all these electronic records to another person to review. The Authorizing Official already does this electronically in addition to have a third party person sign the receipts. Since we are required to scan and upload our receipts and then AMEND those files to	Many thing prevent us from working hand in hand with the states and tribes. Getting permission and completing the forms is a slow process but not as daunting as formulating a project that all partners share in equally. Often, it is EPA scientist that are often at a more technical level (PhDs) often do the data analysis. The issue is how can we assure that states and tribes collected data correctly and according to EPA protocols? If there is a problem with the data who is responsible (recall the ongoing crisis with lead contamination in drinking water in Flint Michigan??) In THEORY working with states and tribes is great BUT the FRAMEWORK that facilitates us doing that is not there. Unless EPA management is willing to forgo some of our QA requirements (e.g. field collection and sample tracking protocols) and other restrictive policies (e.g.	If the push is going to be to provide better customer service to the public then we will no longer be a research agency. Period. Without the resources (funding or staff) to do research, I don't know exactly what 'service' we are going to provide. With reduced budgets it is just not possible to add more administrative duties on researchers. Nothing will get done, unless a entire new center or office is created to provide customer services. I feel we are very strong in this area already, all a member of the public has to do is Google 'EPA' and they will be inundated with websites, links etc., etc. The reports, publications, blogs, YouTube videos, scientific tools and regulations EPA provides to keep our air and water clean are the customer SERVICES that we provide.	Government Performance and Results Act (GPRA), ORD maintains a set of annual performance measures to track and report research progress. End-of-year results and data trends for GPRA measures are reported in the President's Budget and Annual Performance Report. I don't think that this is necessary. VIVO "is ORD's expertise location tool, which integrates information about ORD federal researchers and cooperators from authoritative sources as well as direct user input." Is this necessary? Aren't our profiles and CV's on our site websites? This is a great example of government redundancy.	Contracting within EPA, in general, has many frustrating challenges and seems totally understaffed and over burdened. Some ideas for improvements are: 1) creating one central database for Contracting (with separate pages for each type of contracts, 2) improving/updating the grants tracking and approval software 'IGMS'. It is very slow and confusing to use, 3) hire more contracting officers so that contract initiation, amendments etc. occur in a timely fashion. The Office of Acquisition Management/ Procurement Operations Divisions (RTD and Superfund sites are the ones that I work with) are very slow and seem completely bogged down. Their staff turnover is ridiculous, clearly there are	The U.S. Fish and Wildlife's LCC's (Landscape Conservation Cooperatives) align well with some of our research at EPA and I can see many places where we could work with them. They "use a collaborative approach to identify landscape-scale conservation solutions. LCCs work across jurisdictional and political boundaries to work with partners to: meet unfilled conservation needs, develop decision support tools, share data and knowledge and facilitate and foster partnerships. As part of a shared science strategy, LCCs coordinate closely with the National Climate
1393	1392	5/23/2017	Employees are bombarded with communications from various sources, many of which contain ???requirements??Â. Required actions should come through one channel ??? a line management channel, not multiple channels (usually email). Email is not management. Processes should be consolidated similar to how the required training was consolidated using the e-learning site (improvement is still needed). Facility-based information should be communicated in a consolidated way, not through multiple emails from different people in the same office. Communications product approvals need to have more prominence in the Agency and a better system needs to be developed and FOLLOWED. The system should include the technical expert, the appropriate manager, and the appropriate communications staff ??? not just comms staff. Currently, much is done through email			Invest in organizational development. The high scoring agencies on the annual FEVS survey (NASA, NRC) have internal organizational development consultants and metrics/leadership that encourage them to be called upon by the top agency leadership as well as at the grass roots for small interventions. Develop sound performance metrics. Managers should be rated for management and leadership, not just for delivering the products developed by their staffs. Relate the individual performance metrics to the organizational performance metrics. Clear roles and responsibilities between	Employee data, including position descriptions, performance reviews, awards, training history, and records of disciplinary actions, should be in an automated system that is available to supervisors (i.e., a dashboard for each employee). Position descriptions should be standard not customized for every person that comes on board.	Policies should be consistent across government agencies. Develop a system of consistent position descriptions across government for jobs not unique to a specific agency. This would help ensure consistency of grades across the government.

1394	1393	5/23/2017	Organizational - review process for regulatory packages has completely gotten out of hand. 30 people checking for commas is a waste of time and government funds, particularly when the reviews aren't even consistent. There should be one person who reviews these packages FOR CONTENT in the division and one person who reviews FOR EDITORIAL EDITS. This would eliminate the inconsistencies in the regulatory packages as well as shorten the review time.				electronic reporting systems for data for use in regulatory reviews and enforcement reviews. electronic document management and reviews for use in regulatory reviews - management still refuses to do document review electronically	
1395	1394	5/23/2017		Centralizing where these stakeholders conduct business with EPA will help reduce burden and improve data quality. I believe we are not marketing e-Portal services enough so that its becomes common practice to navigate to site to conduct all EPA business there. All EPA programs that collect data from external sources should be 'required" to link from the e-Portal site. In addition, many of the external stakeholder will also need Federal assistance to build the infrastructure needed to automated business practices with EPA.	I strongly encourage all e-reporting programs to conduct surveys to collect feedback on any e-reporting programs/applications that interact with our stakeholders. The results of surveys should be published on the Web. Programs will negative feedback should be reprimanded in feedback is negative or deficient.	There are a number of e-reporting programs that could be consolidated. Regulatory changes should be looked at to make from reporting more homogeneous and consistent. In addition, shared services should be "mandated" by some e-electronic reporting systems to reduce cost and simplify operations.	SMS ID verification technologies should be more widely used at EPA to verify identity of users conducting business with EPA.	
1396	1395	5/23/2017	I joined EPA about a year and a half ago. In the area of employee benefits, it seems there are different offices in different geographic locations that handle various topics, and it can be hard to track information and contacts for various topics. Would suggest improving access such as be having a single portal that includes access to contact persons.	For the various subject matter areas across the agency, the agency benefits from agency officials maintaining a good working relationships with their state counterparts.	For the various subject matter areas across the agency, the agency benefits from agency officials maintaining a good working relationships with their state counterparts. 1399	1398	5/23/2017	I work in a division that prefers work plans, schedules and process oriented standard operating procedures be followed prior to initiating any work on national policy related issues. Quite often in the early stages of scoping issues and options for resolution, there is not enough information to properly inform the work plan for resolution. However, a great deal of employee???s time is spent on these process oriented documents because they may provide a metric or goal post for management. I think managers need training on how and when these tools when used properly create a more efficient and effective EPA. In my division (AQPD), we have about 5 assistant directors who manage or lead projects on the behalf of the director. In addition, professional staff have group leaders who are first line supervisors. I believe because of the substantive number of projects, my immediate supervisor (i.e., first line) has assigned certain staff as ???policy leads??Â to	2.I believe the EPA needs to learn how to better communicate with its stakeholders using plain English. These stakeholders include businesses, environmental groups, states and local governments and the public (ages ranging from youth to adult). Also, I believe that EPA needs to better market the need and requirements for particular regulations, CWA, CAA, pollution and other important environmental matters. Generally, the public is unaware of the local, state and federal governmental process to address environmental issues. The way the world communicates or shares information is ever-changing. The use of social media is more important now. Websites like regulations.gov and our public website are losing public visibility. EPA needs to be on the forefront of the changing	Certain programs and topics are led by EPA headquarters offices. EPA Regional offices are always first to provide customer service to states, tribes, local communities, the regulated community, and the public. For programs and topics are led by EPA headquarters offices, sometimes the regional offices do not have the program expertise, current EPA message or latest information affecting a topic and may provide customer service that can be viewed as inaccurate or slow because they have to consult with headquarters on the topic or program. I believe when EPA headquarters is the best office to provide customer service on a program or topic we should provide that avenue to states, tribes, local communities, the regulated community, and the public to reduce response time, inaccuracies of shared information from EPA and provide customer service that directly connects best office to	There are a number of opportunities to make changes at EPA that would reduce cost. One change is to reduce or eliminate the costs associated with publication in the Federal Register and its printing. Changes to the Federal Register process reduce paper costs and does not impact environmental protections.		
1400	1399	5/23/2017	P-Net is a superfluous entity, created because the Agency's management was unwilling to discipline intentional improper use of the Government purchase card. ELIMINATE P-Net.	In the Florida Panhandle the population is unable to tell the difference between the federal EPA, the state DEP [Department of Environmental Protection], and the county health board. I am remotely removed from "cooperative agreements" between the EPA and state/county/private but it seems to me that the state/county/private entities have to jump through many hoops in order to get any co-operation.	Create a commission to look at the "rules" created by the Agency to 'obstruct' customer service; particularly between ORD [a research entity] and local colleges/universities.	Allow co-operative agreements that would allow local university students to spend one or two semesters at an ORD facility to get experience and credit hours.	Yes but they cost money and the ORD work-force [I mean the Principal Investigators] are set in using the 'comfortable' OLD methods.	An outside commission needs to look at "research overlap".

1401	1400	5/23/2017	We need additional support from LER and OGC for disciplinary matters. The process takes way too long and we are not getting the support we need. HR needs a complete overhaul. We are not given adequate support to hire and on-board staff. We get different answers depending on the staff working on HR issues and it takes too long to get the assistance we need for hiring. (While we all recognize we're downsizing, we will still need to replace critical staff when they leave.) We need better technology tools to do our jobs. Computers don't work; data systems are outdated and too expensive to upgrade and/or fix; even speaker phones are not good enough to have meaningful engagement with parties outside the building (either regions, states, and/or employees on flexiplace). The funding process for the Regions is broken. HQs provides funding by program area, but there is no transparent accounting for how those funds are actually spent or FTE utilized. All regions should not have the same resources--it should be driven in large	Let states do their jobs, but hold them accountable. Many state programs were authorized quickly with known deficiencies so states are not always even capable of doing their jobs. Each state program should be reviewed for completeness and updated as necessary. They should actually have to prove they have the resources to run the programs (which is often required but they haven't been reviewed in the decades since the original program authorization).	Need better data. Need better transparency.	Take a long, hard look at the regional structures--they are all organized differently which makes communication and coordination overly burdensome and inefficient. Combine a few regions to conserve resources.	We need better data but we get so much push back from industry. It's not overly burdensome to get data in electronic format. More data should be transparent so communities, states, and program offices know what's going on and can address problems before they become too large. We need better data systems to facilitate data analysis so we can prevent problems and/or address them before they get too large.	Again, look at the labs and see if there isn't a way to consolidate and/or specialize. Look at the regions and combine some of them.
1402	1401	5/23/2017	Relatively few resources are devoted to the institutional integration aspects of change management. The focus is normally on project completion and that is often too narrowly defined. Implementation and integration timeframes compete with management tenure. Projects and other change initiatives that are not implemented waste development resources. Improved coordination would help ensure smoother transitions.	The Agency needs to become nimbler. Improvements in internal governance are needed in order to maximize the value the services provided by the Agency. Our world is becoming increasingly dynamic, especially in terms of economics and the environment. Therefore, additional resources are needed to address the mechanics of how to steer a large organization more effectively to meet these inevitable and often diverse and unpredictable challenges. Improvements made from meeting our internal customer needs more effectively can also be applied to external customer engagement as well.	While technology solutions are a key aspect managing work and tracking progress, gains in efficiency also depend on good governance and having an effective skill mix to ensure that management???s priorities are able to be effectively implemented. Generally, the Agency would benefit from earlier consideration of implementation requirements and LOE estimates.	While authoritative leadership and expectations are well defined, collaborative leadership is not well defined or utilized. In order to retain, train and recruit such leadership, we need to understand these roles, the associated skill sets, and establish career tracks outside of the traditional management track. Do frameworks for the establishment collaborative charges exist? What are the characteristics of suitable collaborative projects?	It is through good governance that sound technological decisions are based. While there are efficiencies to be gained through the use of project and portfolio management software, improved integration relies on staff with sufficient experience to develop and manage effective communication plans.	Most of the management and governance challenges faced by the Agency are common across government. Since we are facing many of the same challenges, especially in the areas of change management and IT, collaborative forums to discuss these issues would be very helpful. The traditional route of going up and over to get information from parallel programs like FDA, one tends to get the good news. Establishing staff-to-staff contact would also encourage sharing of what did not work and why.

AMERICAN OVERSIGHT

	I
1401	
1402	One approach to addressing our knowledge retention crisis could be to define collaborative leadership skill sets, roles and positions. The establishment of 13-14 career tracks focused on implementation across projects and initiatives could improve the allocation of resources and speed the time to implementation. There should also be promotion potential for staff committing themselves for long enough to see things through. The position for portfolio manager could be defined and could also be a stepping stone to CIO positions.

1403	1402	5/23/2017	In general terms, layers of oversight by Headquarters personnel prevent us from doing our job efficiently and effectively. I work within the Criminal Enforcement Program, specifically, the EPA Criminal Investigation Division (EPA-CID). Despite years of attrition, and/or budget cuts, the EPA-CID [with the support of the National Enforcement Investigations Center (NEIC)] continues to produce; working in the field (not at the desk) with our federal, state and local counterparts. Its oversight components, OECA and OCEFT, seem to be operating such that they (OECA and OCEFT) believe EPA CID (and the NEIC) exist to support them when in fact it should be the reverse. OECA and OCEFT do not seem to try and obtain resources or follow through on requests for support in a timely or effective fashion; they seem to task CID and then take credit when significant outcomes occur. If EPA-CID and the NEIC reported directly via a separate AA-ship, or directly to the administrator, the taxpayer would benefit by a more	Form more Task Forces as are routinely used within the EPA-CID.	Hire a PIO specifically trained to message the EPA Criminal Enforcement Program, its work to protect Victims and deter criminal conduct, and its connection to the progressive engagement scheme employed by the agency (i.e., compliance assistance should be the first level of engagement, validation inspections next (assurance), administrative/civil enforcement mechanisms, criminal enforcement reserved for criminal conduct, etc..	I want to suggest an organizational change that I believe will lead to a more Efficient, Effective, and Accountable EPA, specifically regarding its Law Enforcement Functions [I am not commenting on the Independent function of the Office of the Inspector General, rather on the EPA Criminal Investigation Division and linked Divisions). Currently, your highly trained Criminal Investigators report though the OECA Assistant Administrator and within that context, do not ultimately answer to a Seasoned Law Enforcement Member of the Senior Executive Service; rather they ultimately report to a political appointee with a different cultural view of the organization (in my opinion).		See Q2 above
1404	1403	5/23/2017	It is hard to get resources these days, we are great at purchasing high end highly sensitive instrumentation through the capital equipment budget. However we do nothing to devote resources to maintain said instrumentation. In short I can't do my job if my instruments are down needing repair.	At my level I am not involved in these decisions.	At my level I am not involved in these decisions.	I see very little opportunity, because management does not pay attention to subject matter experts, i.e. the bench scientist.	Yes, the new technologies are many, probably to many to list here. But in short in the field of chromatography there are newer and improve columns that give better resolutions, than their old counterparts while reducing the amount of solvents used to run an analysis, hence lowering the cost of waste disposal.	At my level I am not involved in these decisions.

1405	1404	5/23/2017	Make changes to People Plus reporting system to be more flexible with editing and modifying leave requests. The previous system, webforms, made it easy to reduce the number or hours of leave requested if less hours are needed. Right, now employees and supervisors do not have an easy way to make and approve the modifications, and several hours are wasted with audits, and trying to elevate changes needed in the system to match up with actuals. Also, credit hours employees have to submit a separate schedule, and report their schedule in a addition to reporting in people plus. The system should be updated to allow one place for scheduling and reporting, so that employees don't spend more time duplicating their information.	Continue and expand the existing grants and programs that provide funding and partnership opportunities to states, tribes, and local communities to educate and prevent violations in the first place. Work with the private sector more closely to educate and inform them about how to best comply with environmental rules and what the impacts of their activities may be to the public health and environment. More funding and more employees at EPA are needed to effectively outreach to private sector to prevent issues, which will reduce the need for enforcement later on.	Set up more local satellite offices, and allow employees to travel more and work remotely from areas where their projects are to interact with the communities they serve. There is too much emphasis on coming into the office to do our work, when much of our work should be with the community, states, or regulated community.	Allowing and providing the resources for a substantial more number of employees to telework or work from communities or areas where there is a large number of environmental issues, and reduce the footprint of our office buildings. Also, continue to employ and emphasize the standards developed by the International environmental management system, ISO 14001 which should guide all of our activities at a fundamental levels. https://www.iso.org/files/live/sites/isoorg/files/standards/docs/en/iso_14001_key_benefits.pdf	Provide more resources and support for the (former) Superfund Innovative Technology Evaluation Program (SITE). The Superfund Program used to be involved in providing funding and assistance to technology companies interested in testing and proving their cleanup methods. Its my understanding that the SITE program was discontinued, and it should be re-started to allow opportunities for businesses to develop their innovative cleanup technologies.	Provide a focal point for organizing the agency based on the communities we serve and the industry we regulate instead of organized by all the various laws and regulations (remove the "stovepiping") Train employees to be experts with the industry or community, and have them rely on specialists in the office familiar with the various laws, instead of have each law have it's own staff dealing with the same communities or industry as staff dealing with all the other laws. Instead of having so many experts in each law or division working directly with the communities, other agencies, and
1406	1405	5/23/2017	The FPPS system is slow and needlessly complex. Replacing FPPS with a more up-date and user friendly system would save a lot of supervisory time.	Bring back the Performance Track program. Performance Track provided an excellent forum for private businesses and EPA to collaborate on innovative and economical environmental strategies. It also provided opportunities to showcase private industry's pollution prevention and other environmental initiatives. The program was terminated 8 years ago.				

AMERICAN OVERSIGHT

	I
1405	The Superfund Program has a very robust community involvement and outreach program and if this method and best practices for the work they do could be used for all of the various EPA offices, and also organize all of the offices around the goals and the makeup of the community, this would results in less effort and duplication of effort across the agency overall. In other words, expand this program and it's methods to be the focus of how EPA manages their work as opposed to a support function in the office of Superfund.

1409	1408	5/23/2017	Excessive annual training requirements.		Larger web presence with rich data banks allowing states/tribes/communities/public to find data independently at the point of need instead of needing to submit FOIA requests or become frustrated on our internet site.	Allowing more electronic reporting of emissions data and possibly automating the collation of that data.	Drop the overt courting of coal mines. Even the Coal Museum in Kentucky is now run by solar power because it's more affordable. Investing in and researching better "new" renewable technologies will help America stay at the forefront of innovation instead of stuck in the industrial age. I'd much rather the rest of the world license/purchase American technology to improve the environment in their countries instead of America having to license/purchase other countries' technology.	A former EPA Administrator said that he found when Reagan rolled back EPA regulations, business owners actually asked him to keep implementing them because customers didn't trust their products when they saw them as deregulated. Form partnerships with business organizations that show how environmental regulations promote trust in business products and industries which grows business more than deregulation and a clean environment creates a better market for their products (people who live longer will buy more things).
1410	1409	5/23/2017				Space consolidation. If cloud computing capabilities are expanded, the agency might be well served to change floor plans in such a way that allows more employees to occupy the same amount of space, as workstations won't need to be big enough to accommodate old record keeping habits. Too many employees are reliant on keeping mountains of paperwork dating back years to even decades, despite electronic record keeping capabilities. The younger generations seem more flexible in this regard, and if EPA and other federal agencies are going to make strides into 2017, older methods need to be phased out. This will save money on rent, and foster a more collaborative environment.		

AMERICAN OVERSIGHT

	I
1409	HPOD contracting is severely understaffed making their employees unresponsive to internal and external customers. Better staffing levels and benchmarking response times like in customer service industries would alleviate long-term frustration for EPA staff as well as the companies that we contract with.

1411	1410	5/23/2017	2 things regarding Federal Register notices. First, we should be able to submit packages for publication in the federal register completely electronically (i.e. no need for paper or CD copies). Second, the FR notices themselves should be re-formatted to optimize electronic reading. Currently they are published in 3 columns, meaning that when you read on a screen you scroll down and then up again multiple times per page, while trying to ignore the other two columns. Re: time and attendance system (PeoplePlus). You should be able to submit multiple leave slips for the same day as long as they are for different hours. Currently, once you have put in a leave slip for one hour of the day (e.g. a morning doctor's appointment) you cannot put in a second leave slip for another time of the day (e.g. early child pick-up).				eDiscovery and other database management lags significantly behind the private sector, making us work significantly harder than necessary to search and analyze the information we already have. For example, our ability to search our email system to respond to FOIA or other information requests is severely limited.	
1412	1411	5/23/2017	Finding information on the agency???s intranet can be a huge investment for both staff and managers. The more time employees spend trying to filter through the sea of outdated and unmanaged content to locate current administrative, policy and program information, the more it costs the agency and the employees in wasted time and productivity. Senior leader support is needed for the Office of Internal Communications and Office of Environmental Information to tackle a transformation of the agency intranet to make it a standardized primary internal communications tool. A more intuitive design and interface is needed to improve access to the tools and technologies employees need to advance the agency???s mission. A plan for regions and program offices to review and clean-up outdated content on the intranet is also needed.			Roughly 80 percent of companies now run on open source software to manage their intranets to save money. However, our current methods for managing the intranet is extremely costly and not conducive to advancing work or saving the agency money. Under the current system, each regional and program office manages multiple servers and intranet accounts called TSSMS accounts. These multiple accounts and servers cost the agency thousands of dollars each year. By adopting Drupal ??? which is the system EPA uses for its public website -- as the intranet standard for the entire agency, EPA could save a significant amount of money, while also improving	Adopting a standard intranet strategy and platform across the agency would greatly increase our efficiency. It would improve information sharing and also reduce costs. A platform like Drupal, best known as the open-source platform behind public websites like Whitehouse.gov and our own EPA.gov, is also a good option to manage our intranet. As previously mentioned, the agency has already made the investment in Drupal for the public site. However, regions and program offices are allowed to use multiple platforms to manage their internal websites. Because there is no standard, the agency is spending a significant amount of money to support multiple platforms. These platforms are not well	

AMERICAN OVERSIGHT

1413	1412	5/23/2017	Within OARM, Office of Administration, there is the Security Management Division (SMD). That division creates redundancies and has significant overlap with other offices. The Personnel Security Branch should be a part of the Office of Human Resources since there is a signification connection in the work that they do and would create efficiencies that save time, money, and help get new employees onboard faster. The National Security Information team (within the Personnel Security Branch) should be a part of the Office of Homeland Security and not within that branch at all. The Physical Security and Preparedness Branch should be a part of the Facilities Management and Services Division. Both are related to the physical security of office buildings, and having them in the same office would create efficiencies and ensure there are no gaps in our security. Dissolving SMD into other offices would decrease needless bureaucracy. Additionally, the management within SMD is potentially harming the security of this agency				For a while EPA was offering Personal Audio Conferencing Services to HQ employees that allowed up to 6 lines to call into a conference line at no cost. However, the service has since filled up and they are not accepting new requests. This means that for small conference calls, offices often have to use a normal conference line for meetings, which results in increased costs for the agency. (http://intranet.epa.gov/otopintr/phoneservices/phoneservices.html#conf) EPA should also look into services such as Good for Enterprise that would allow employees to access email on their personal phones. This would allow employees better access to email on busy days, but would not	
1414	1413	5/23/2017	It is difficult completing some tasks on time due to other coworkers being compressed or teleworking. Typically per a work week, you have Tuesday-Thursday to really meet with coworkers and get things done.	I believe better environment results can be achieved by sharing results from other countries and demonstrating how they have interacted to achieve their countries environmental goals.	In order to provide better service to the public, I believe that the federal work schedule should coincide with the typical Monday-Friday business work schedule. Compressed days hinder the success of achieving environmental results at the state and federal level.	In order to reduce costs, EPA must consolidate its office buildings. I suggest moving the Potomac yard building to the Federal Triangle complex as the lease is outrageously expensive.	In order to be more accountable, I suggest having more outlets for the public to comment or make suggestions on routine EPA processes. Maybe having a direct message source if projects are posted online.	We can accomplish more by sharing interests and expertise with the states.

AMERICAN OVERSIGHT

1416	1415	5/23/2017	There should not be so many funds wasted on new office equipment/supplies. There should be more mandatory actual discourse between colleagues, too many EPA employees may become complacent or slow/lazy in their work without this level of accountability.	Making in-person connections with external partners would be beneficial, and it would also be useful to have a more direct process as well as a more well known procedure for states to get in touch with researchers directly (not just EPA Region points of contacts) to ask their questions, share their environmental observations, etc.	Ensure that the EPA employee or contractor who communicates with states is a friendly and responsive individual as well as have high standards for who that point person is.	Yes, since the majority of EPA employees "work remotely" or "tele-work" there is a large cost waste associated with getting the lights on in areas of the building where few if any employees are working. In addition, since few employees are in the office frequently/regularly, there is no need for such a large janitorial staff presence in the EPA buildings. Rather than custodians coming to each cubicle/office daily, biweekly cleaning would suffice. Also, there is not a need for so many printers and office supplies in general. EPA has a surplus of these items.	Yes, EPA should stop printing the majority of their materials. Not only is this a waste of natural resources, but printing documents, fact sheets, annual yearbooks and reports is excessively expense, and in my time working here, I have seen so many documents untouched in filing cabinets, collecting dust. Many contracts/funds for printing should be cut.	EPA should look to innovative office/internal processes to make our Agency more efficient. Many of the work habits that EPA employees have are out-dated. A sense of pressure and urgency is lacking in the observable work practices in my office.

AMERICAN OVERSIGHT

	I
1415	ORD has reduced the amount of contract dollars it spends annually on public website support as a result of its Drupal migration. 1417	1416	5/23/2017		Renewing and upgrading water (i.e. potable water, wastewater, resource water, and stormwater) infrastructure (e.g., pipes, pumps, storage, treatment, green & gray infrastructure) is a top-four priority for EPA. It is too expensive to renew all water infrastructure. Therefore, improvements are needed in capability to cost-effectively assess condition of installed pipes. So, investigate ways in which EPA ORD, OW (e.g., State Revolving Funds, WIFIA), utilities, service providers, technology developers, academia, engineering firms, states, and other Federal agencies can work together to develop better technologies, procedures, and life-cycle and failure data to enable better decisions on when, where, and how to renew water infrastructure. This can save substantial funds, for example, by (a) keeping good pipe in the				
1418	1417	5/23/2017	There are several instances where other divisions essentially have dumped work that they don't want to take on to other divisions; however, staff are not able to have a say since the higher managers have already agreed to it. As people either retire or leave, positions are not being filled as the workload increases. These are two instances that have impacts on each other and are two separate problems.		Don't start work groups on customer service. Use that money to fund existing programs that would greatly benefit these entities. More crop tours, site visits, and allowing staff to attend conferences would help staff connect what they do at work with what is going on on the ground in states, tribes, local communicates, the regulated community, and the public at large. They can then provide better customer service since they can then access that experience/background knowledge.	Stop rolling back on regulations and reforming regulations that are already in place. They are costing EPA a fortune and a lot of wasted time. They are in place for a reason.	Make IGMS more user friendly. Allow people to save their work in the system with ease. Use more GIS in data collection and/or information display. Visualization goes a long way. Allow EPA platform to accommodate GIS story maps.	Identify where resources are similar among other federal agencies and collaborate instead of recreating materials/resources.
1419	1418	5/23/2017				I have seen no such opportunities in all my time at EPA. We are already deprived of the financial resources needed to fulfill our statutory obligations to protect clean air and water.	I imagine it would save a lot of money if EPA bought its own computers instead of leasing them monthly from EZTech.

1420	1419	5/23/2017		Good, solid Supplemental Environmental Projects (SEPs) allow a respondent to perform needed environmental work associated with their violations, in lieu of payment of a full cash penalty. These can provide tremendous environmental benefit for local communities which would otherwise not be possible. Additionally, in my experience, it allows a respondent to become more aware of environmental issues in his/her community. We should readily offer this opportunity in most enforcement actions where it is appropriate.	EPA should be in a position to be able to oversee state authorized programs so that when disagreements arise or things don't go as they should (i.e., Flint, MI) EPA can assist with mediation and compliance assistance.			
1421	1420	5/23/2017	(1) Interference from industry and political interference in science. Repetitive requests for delay in science to consider "new" or "soon to be released" data that delay decisions. There will never be "perfect" information. Decisions need to be made based on the the information available at a given time. (2) Allowing non-experts to provide equal sway in policy or science decisions is inappropriate and ineffective.	(1) Increased engagement with ECOS and ERIS. (2) Restart the sectors program in a thoughtful and meaningful way.	(1) Increased engagement with ECOS and ERIS. (2) Restart the sectors program in a thoughtful and meaningful way.	Encourage cross-media office approaches to environmental protection. Reward collaboration. Increase hiring flexibility to allow for a more agile workforce that can respond to the changing needs of our nation.	EPA's IT infrastructure and hardware is embarrassing and makes it impossible to do our job well.	Reward collaboration in meaningful ways. Encourage communication across offices, governments, etc.

AMERICAN OVERSIGHT

	I
1420	
1421	Take advantage of all hiring authorities, such as Title 42 and other flexible hiring authorities. Getting the best and the brightest is the best way to improve efficiency.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1422	1421	5/23/2017	Managers (both GS 14 and 15) are very rigid with time and attendance procedures of their employees, however, I have experienced (on numerous occasions) where managers seem to take advantage of their positions by taking advantage of the rules and regulations. Managers need to be held accountable in all areas and set the standard by their actions. GS 14 and 15 levels supervisors need to be watched for abuse of power. Regional Division Directors and Deputies need to assure compliance and fairness within their organizations on a regular basis.	EPA needs to be able to continue providing grant monies to state and local governments for voluntary partnerships. More grant monies and very specific grant conditions could help in achieving better environmental results. It will definitely work against achieving results if EPA stops providing grants dollars for voluntary partnerships such as Pollution Prevention, energy efficiency, lead programs, etc.	EPA needs to provide added value for states, tribes, and local communities so that they want to work with us. In the past we have had joint events, and have brought $$$ to the table and $$ (it works!). Additionally, joint press about positive events like the Safer Choice Program National Partners of the year, or Energy Stars' National Anniversary needs to be told, but this year HQ communications was not allowed to do press...they were told not to issue this positive effort to the press ...there were great stories to be told ...let them be told to the press!!!	Yes, as a former position classifier, I know of GS 15 supervisor that are only supervising 8 employees and is reporting to another 15 over them...this is poor position management! All of the regional organizational charts need to be reviewed immediately to begin making 15's tow their load of work for the salary that they are being paid or downgrade the position immediately. Additionally, EPA has allocated enough funds for 1 percent of spending on GS salaries to go toward performance awards...EPA should not issue ANY performance awards this year!!!! You can save 1%!!!	Unknown..... FYI...I am a 30+ year non supervisory GS-13 federal employee (with 1/2 my years in EPA). I have seen supervisors and managers come and go...that is why I am so targeted in my suggestions to you. Please look at the management and supervisory structures ...They need to scrutinized more fully and reviewed regularly for grade justification.	Outreach and Voluntary programs (if they survive the realignment and FY18 budget) should be reorganized to be part of the Administrators Communications staff and Regional Administrators staff in order to make inroads with the public. Positive education and awareness are critical in positive relations with states.Recognition of partnership efforts is critical for better collaboration and communications with other federal agencies, state and local government.
1423	1422	5/23/2017		Certain states and local communities, as well as certain private sector stakeholders, have deployed clean energy technologies like renewables and energy efficiency that both have achieved better environmental results and lowered these stakeholders' costs. The EPA could support additional states, tribes, local communities, and private sector entities in achieving these improved environmental results and cost reductions by sharing the many existing clean energy success stories and helping others implement similar types of solutions, including by helping specific states, localities, tribes, and companies identify which clean energy options may generate the best environmental and economic outcomes for them.	EPA's website has housed a tremendous amount of information, including tools and guides, that can be of use to the public at large and other stakeholder communities. Maintaining these resources and improving their searchability on the Agency website would improve our customer service to these groups by making the information and resources easier to find.	I would guess the Agency could reduce the cost and emissions of its building footprint by modifying our own heating and cooling processes to incorporate a bit more seasonality (i.e., setting temperatures a degree or two cooler in the winter and a degree or two warmer in the summer). These efficiencies could also yield an interesting story to share with other institutions (businesses, schools, state & local governments, etc.) that also might derive benefits from this type of change.		

AMERICAN OVERSIGHT

	I
1422	Each state office that received Pollution Prevention Grant monies and have manufacturing best practices that were adopted in conjunction with EPA grant monies to state universities. Local collaborations have already been made with Department of Commerce NIST MEP Centers. EPA monies helped state Manufacturing Technology Centers and local manufacturing technical specialists... best practices are on their websites. If funding is cut, we will not be involved with/or knowledgeable about these critical efficiencies done at the local level...the connection will be severed.
1423	

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1424	1423	5/23/2017	Micromanagement either from branch chief or director's office	Conducting joint review of pesticides and risk analysis with state and tribes	Reduce redundancy in terms of reviewing same chemicals by multiple scientific committees.	delegate some review or risk assessment processes to states or tribes. Relocate office buildings from city center to suburbs which will reduce renting cost of the building. Consolidate/Combine similar branches to 1 . Reduce the salary of managers since they do not conduct any primary review or substantial ground work.	I do not have any opinion about this	I think we can delegate some risk assessment work of pesticide exposure to states .
1425	1424	5/23/2017	Eliminate the State Review Framework and develop a more collaborative process for working with our states to implement compliance monitoring and enforcement programs. Eliminate OECA's Nationally Significant Issues policy and allow the Regions to work with the states within their Region to determine the appropriate resolution of an enforcement matter. Eliminate the one size fits all designation of National Enforcement Initiatives. These are frequently not the biggest issues facing our states. Increase the utilization of CAA blanket waivers to allow for the Regions to address noncompliance in a more timely manner without requiring OECA and DOJ involvement.	I believe that EPA needs to spend more time listening to the regulated community in order to better understand the unique compliance challenges that they are facing. Many EPA rules are poorly written and industry would benefit from increased compliance assistance outreach related to EPA's interpretation of specific regulations.	We should ask them how EPA can provide them with better service?			Work with our States to understand the specific environmental and public health challenges that they are facing and align our efforts to ensure that they we are all focused on addressing these issues. Establish formal partnership with OSHA on issues involving work safety and chemical accident prevention.

AMERICAN OVERSIGHT

	I
1424	Eliminate multiple reviews of the same or similar assessment of pesticides .
1425	We desperately need to eliminate paper reporting systems and the redundancy of reports being sent to both the states and Regions. This would be a huge cost savings for industry. Everyday thousands of documents are sent to EPA via FedEx or other certified mail at a great cost to industry. Establish an electronic records management system to reduce the administrative burden and significant costs associated with maintaining paper files. The State of Louisiana maintains an Electronic Document Management System that is a great example of an electronic records system that provides electronic access to records and

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1426	1425	5/23/2017	Paper files are still the official records for all our business. This creates inefficiencies of duplication (we must make paper copies of all files while we really work with electronic ones for actual business), takes time for storage preparation, requires drawer space. It is 2017, we can do better	1) Regulations are based on scientific evidence. But what the evidence means is often settled in court, which costs more for government and industry. We could set up this process ahead of the regulation becoming issued. What I think of is the creation of a third party, funded in equal parts from government and relevant industry groups, to review and evaluate the evidence (perhaps during the pubic notice period). The model for this is the Health Effects Institute, a current partnership of ORD,OAR and the automobile industry. The credibility of their review is so much greater because of the multiplicity of inputs. This can be expanded to other sectors. 2) FDA has an interesting process for food products developed for market. While the manufacturer still has responsibility to ensure food is safe, they can voluntarily consult with FDA through a	ORD research is usually targeted to support EPA program offices. Many opportunities exist for doing research that could reduce emissions for industry. It's one thing to say you shall keep levels at this level; it's another to be able to offer "and here are some suggestions you can further develop" from EPA's own research		Electronic records. An agency-wide tool for project management would increase efficiency and offer enormous transparency.	NIEHS and EPA ORD have strong affinity, for example. At a minimum, leadership coordination would help.
1427	1426	5/23/2017	1)Purchase Card Program is an area with organizational processes that are inefficient and ineffective a.Moratorium on new purchase card accounts. There has been a moratorium in place since March 18, 2014 on issuing new purchase card and convenience check accounts. This moratorium negatively impacts the ability for offices to obtain new purchase card accounts when cardholders transfer or retire. The fact that this moratorium has been in place for over three years is a sign of inefficiency. There needs to be a process established and in place for offices to obtain new purchase cards instead of this blanket moratorium. In addition, that process should empower individuals at the lowest level possible to obtain approval rather than creating additional bureaucratic procedures to obtain approval at a high level. Empowering individuals and holding them accountable should be the ideal and not the exception. b.Transaction processing and record		Emphasize the importance of cost impact of rules and regulations One idea for providing better service would be to emphasize the importance of cost and the impact that this has on states, tribes, and regulated community. A recent regulation in my unit had a 30 percent cost increase from the previous regulatory cycle. This type of increase does have an impact. Unfortunately, during preparation of the rule as well as the review process for this action, there was no emphasis on the cost impact. In my view, employees, managers and senior leaders need to emphasize the importance of the cost implications of our regulatory actions on states, tribes, and the regulated community.			Review current programs within EPA for areas of duplication and overlap. There is clear duplication of activities within program offices and efforts need to be made to reorganize. For example, there is a National Homeland Security Research Center in ORD and a Water Security Division within the Office of Water. How many separate offices does EPA require to work on ???security???Â Recommend programmatic reviews to eliminate these areas of duplication and obtain cost savings through consolidation. A further programmatic review is required to ensure that these areas are focused

	A	B	C	D	E	F	G	H
1428	1427	5/23/2017	The time management system is too cumbersome and time consuming. In the Superfund Program we have too many categories and managing them all becomes too cumbersome. We need to find ways to simply using project codes in People Plus. Another major inefficiency in People Plus is we are required to enter time and attest on Thursdays a day prior to end of pay period. Since we haven't yet worked on Friday we cannot record time for projects. We end up amending our timecards every pay period which takes additional time for the employee and timekeeper. What if are give time to enter our time sheet until Friday afternoon of the pay period. This will eliminate amending the time sheet every two weeks and also save time for the timekeeper to verify it.	Currently we have good working partnership with the States and private sector.	I believe EPA has good working relationship with the states. We could have more community engagement although EPA has been advocating this for a few years now and we are doing more community outreach.			
1429	1428	5/23/2017	We do not do enough succession planning. I have been with EPA for close to 20 years and no matter how much it has been expressed that succession planning is needed it goes by the waste side for administration task and budgetary task. Technology is always looked at first above all. It is the admin and budget that assist with the technology getting completed. People have retired or moved on only for their work to passed on to another person who does not have a clue or is doing the same type of job with a full load and then give more. The pressure and stress it great and people who looked loved and cared about their job are now overworked and filling it. This has and is making people deciding to leave and/or retire. Just did not have to be this way. Sigh!! Space is an issue. Program offices used to manage their own space, but now it is being managed by a division that does not always know the needs of the office.	More communication and more opportunities to meet and understand how we can leverage or learn more from all communities we support as an agency.	Same as above for Q2, but listen to the need of the community and try and implement solutions or practices to assist the communities we serve. sometimes we as an agency put things and technology in place, but may not have a full understanding of the community we serve or even the customers inside the EPA we service. Example: Space is need to move contractors on EPA's campus due to the TIC, but space is at a premium. The decision was made for the TIC as a security measure, but did we communicate this effectively with the people who have to find the space to house a number of contractors. Working together would make for a better environment and community of service.	I feel the LEAN program is not fully being utilized and could assist in streamlining processes and creating a better community of service.	Not sure, but sure there are some areas that need attention.	May be better efficiency, lessons learned. We used to have Liaisons to work with the program offices, but was very effective was working with OARM, Security, etc. to build relationships and community of contacts to go to when something is needed. This has assisted both sides in many projects that I have been involved in over the years. If we would stop territorial and work together we could accomplish more, more effectively. We do a great job, but it could be better.

	I
1428	EPA needs an electronic file sharing system that is accessible to external partners similar to SharePoint that is used for internal EPA employees. When we large documents to share, currently the only way for us to share is send it on CD. We also don't have the ability to receive large documents unless the external partner provides a link to download. If EPA can create a file sharing system where we are able to send large documents and at the same time allow external parties to upload to the EPA system we can improve efficiencies and save mailing costs.
1429	Not sure of other agencies, but Wake Med North Hospital has a very good check in process, followup and management. Don't know what they do, but it is impressive.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1430	1429	5/23/2017	Leave has to be requested in different systems, dependent on the type, due to PeoplePlus limitations;annual leave, comp time, travel comp time are requested in PeoplePlus but Credit hours (CH) leave are requested in Lotus Notes & request take a long time to process from telework locations. In 2018 People Plus will start to track CH and we'll be able to request CH leave in PeoplePlus, but the system will not track our actual minutes worked daily for accumulating 1/4 hour increments for the week but will truncate to nearest 1/4 hour daily, so we'll be supplementing the government with free minutes each day. Tracking in one system should be expedited for efficiency and actual minutes tracking needs to be programmed into PeoplePlus to not violate the law which prohibits supplementing by federal employees.	Tribal partners seem to be held to a lower standard than states when it comes to performance and that should not be allowed, especially given limited funds. Tribes are also given a higher status than states, which creates inflated expectations of immediate or near immediate response and undue stress on staff which can lead to inefficiencies and ineffectiveness as staff are expected to jump into action at the drop of a hat and drop other critical work due to management pressures. I have heard that grouping of funds and performance into PPGs adds to watered down accountability so those should be checked. Better accountability should yield improved environmental results with limited funds.	Small and rural communities often need a bit more hand holding than larger communities with numerous staff. Additional staff emphasis and travel funds should be allowed for reaching these communities. Also, small and rural communities along with Tribes tend to lose staff more often (for different reasons) than normal size communities, so the additional staff emphasis and travel would also help with that. Challenges and solutions that work for other communities simply aren't practical or applicable to these communities and we need to craft special tools with help of staff experienced with these customers.	I have heard that some building space leases are so expensive in some regions, so those need to be revisited and renegotiated, or changes made. Also, I have heard that some offices have so much empty space due to so many people teleworking, that perhaps smaller office space leases would be merited. If people telework so many days, like 3-5 days on a regular basis, then perhaps they should share a space with someone else, or only have touch down spaces which are minimal; we should not be paying for office space that is not being utilized. Lower total space needs should result in lower lease costs and lower heating/cooling expenses. Another untapped opportunity is providing administrative support to	I can't thing of anything right now on such short notice.	This is such a loaded question with so many opportunities that I can't even begin to do this question justice. I suggest that you look at currently coordinated work and groups and ask those folks for ideas directly, plus repeat the process that was used to create those successful partnerships for other areas identified and other agency groupings.
1431	1430	5/23/2017	We do not use Docu-sign or other secure signing tools. Not only does this waste resources as far as printing and pushing paper, but it hurts our ability to properly track documents (records management). Additionally, we are wasting resources and opportunities to collaborate by having many databases rather than storing information in a centralized database.	Rather than pesticide approval letters, provide stakeholders with a 'fact sheet' outlining changes made to the pesticide product. This will help improve stewardship and communication with states, applicators, and growers.	Stronger risk communication strategies. Our stakeholder groups are forced to interpret our communication strategies in regulations.gov rather than having information come accurately and in an easy-to-understand format for our stakeholders. I think the public at large would benefit from better 21st century communication methods.	Pesticides program has a portal for chemical company applicants to submit submission packages for review. Unfortunately, staff is unable to get this information in a user-friendly way, so we are often asking companies to resubmit information by email.	Docu-sign Mandating electronic reporting, recordkeeping, and data collection. Using CRM tools, commonly used in the private sector, to track work progress	Invest in technology but ensure EPA staff are involved

AMERICAN OVERSIGHT

	I
1430	Again, this is such a loaded question with so many opportunities that I think you should focus on this separately as with the above. So many best practices in so many areas.
1431	The Worker Protection Standard and Certification and Training Rule did an amazing job at involving stakeholders in all aspects of decision-making. They are a great model to use for effective state-federal partnership

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1432	1431	5/23/2017	Currently, the ordering process is too complicated due to conflicting requirements. This causes the ordering process, for even simple items such as pens, to be confusing and to take far too much time. Often, it???s difficult to know which requirements take priority when there are conflicting requirements. The various requirements should be clearly elucidated and should not compete or overlap.		Think more like team members than regulators.	I rarely see OPP management excited about supporting the EO for EMS. Most of our ESC management review meetings are not attended by top-level OPP management and that sends a clear message of disinterest. So far, the Trump administration has not eliminated the EO for EMS requirement. Of course that could change, but unless it does, shouldn???t there be a little more enthusiasm for this EO? As a result, other intraoffice environmental groups and efforts have been created that seem to overlap with the efforts being made at the EMS level and there isn???t a lot of cross communication.		
1433	1432	5/23/2017	That your supervisor has to return a leave slip to you before you can fix it. We used to be able to ???take back??Â a leave slip to make fixes, and it???s just crazy to make overworked supervisors have to take the first step before staff can correct a leave slip. This is especially a problem with sick leave slips for doctor???s appointments, when you can???t predict very well in advance the time you will be on leave. What possible business reason could there be to not trust staff with this responsibility? I can think of none. The Agency-level awards process is antiquated. Managers write nominations for staff at the division or office level, and the nominations advance through a system that has so many levels that it takes a whole year before there is an awards ceremony. Actually, the last several years, there hasn???t even been an actual awards ceremony.	Hire some Assistant Administrators, because they are your lieutenants who can interact with EPA staff to advance your priorities. Hiring a set of special assistants or senior counselors (either way, recent law school graduates with little environmental law or regulatory experience) is no substitute for a set of experienced, senior managers. You need people you can trust, who also have the respect of staff to make sure you are getting sound information. Hire people who have experience in environmental programs at the state level, if you are really serious about federalism. If you don???t hire qualified AAs, and rely on acting career senior officials, how long do you think any changes you do manage to make at EPA will really last? No Administrator has ever met every staff person, but this is the	See my answer to #5. Also, make it easier for the public to see on the web exactly what is going on in their neighborhood in terms of environmental quality (e.g., what was the original expiration date on a facility???s permit?).	There are too many people who have been ???promoted??Â to ???front office??Â jobs in AO and AAships, where they are farther removed from programs that protect the environment. In theory, they are there to provide oversight and aid senior officials, but people who sign up for those jobs tend to be more out of touch than the average staff person, and senior officials like having minions at their beck and call (whether that helps with environmental protection or not). And the more out-of-touch are staff with our stakeholders, the less effectively they can provide oversight. Whatever it takes to do so, move as many of those staff to program offices, divisions and branches. To some, it	Make more use of electronic reporting and continuous monitoring as well as rules that would require environmental information to be gathered and publicly reported without concomitant requirements to control pollution (let that follow based on the level of interest from the public), and other similar tools from the field of behavioral economics. Recent attempts at EPA to encourage electronic reporting have been watered down. Focus EPA resources on building tools that states could use for electronic reporting. If we seek their input in the tools we build and ask them how advancing electronic reporting tools could help them do their jobs, and realize that we???ll never get consensus from all 50 states,	See also my response to #4.

AMERICAN OVERSIGHT

	I
1432	
1433	I can???t think of particular best practices. But I do think that much of the burden for sharing best practices rests with staff in the administrative support offices. They could do a much better job in terms of communicating with staff on policies and procedures, but not just telling us the rules to be followed, but also helping us understand better ways to do the aspects of our jobs that are their bailiwick.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1434	1433	5/23/2017	One thing that is a hindrance is allowing the fossil fuel industry to dictate to the EPA because of the worthless lawyer appointed by trump.	How about keeping the politics of the far right wing out of environmental decisions and start listening to science.		A cost reducing change could be to cut Scott Pruitt's government salary and just let the fossil fuel industry pay him openly or have him earn a PhD in Environmental Engineering so that he can have a clue about the agency he is highly underqualified to run.		
1435	1434	5/23/2017	Contracts! Our contracts system is broken. The Agency lacks an adequate supply of staff to accomplish the work needed to put new contracts in place, in particular. My group developed a contracts request for proposals two years ago that was only released a few months ago. I have experienced stop work periods that have put projects to a standstill because there were not enough contracts staff to ensure a smooth transition from one option period to another on an existing contract. We could use clear step-by-step and standard guidance for managing contracts. And, at the staff/Work assignment manager level, there should be actual in-person training/renewal classes to take periodically rather than just on-line trainings because the education received is less informative. The requirement that only EZ Tech can download programs to our computers - including EPA programs - can be incredibly inefficient, particularly for	I have been working closely with states and local governments on achieving better environmental results for over 20 years at EPA. The voluntarily program I work on provides free (to the state, local and tribal government officials) tools and resources to help them make more informed decisions based on the things THEY care about while ensuring they can meet their environmental goals. For example, if they want to lower their greenhouse gas emissions or criteria air pollutants but also have a big priority to advance economic development and promote renewable energy, we work with them to help them understand the economic as well as energy and environmental implications of their choices so that they can select the best options for their needs. With a single investment plus modest support over time, EPA is able develop and maintain credible,	I think the regulatory programs could learn a lot from the approaches taken by the voluntary programs at EPA. Voluntary programs have to be very focused on the needs of our customers and tailor our approaches accordingly so that we can convince them of the value of our program to them.	Ensure that the lessons learned from any grants issued by the EPA to states and locals are easily available to others (e.g. on a website, in reports, shared at conferences, etc) so that the lessons aren't lost only on the recipient. It will make the value of our valuable tax-payer dollars go much farther.		It would be helpful to identify areas where one federal agency or department's actions could help another achieve their goals. For example, EPA relies upon DOE and EIA data and tools for our analyses but, in some cases, there are deficiencies in the data that could otherwise help EPA produce a better baseline. We frequently meet at the staff levels across agencies to identify these types of opportunities but it would be much more effective if the direction came from the to look for ways to support each other's efforts.

AMERICAN OVERSIGHT

	I
1434	
1435	Our voluntary programs, particularly those that work with state and local governments, have been working internally with our regulatory colleagues over the last several years to ensure that state and local priorities, experiences and circumstances (e.g. energy regulatory structures) are understood and considered during the rule-making process. The voluntary program experience has taught us the significant value of outreach, listening and engagement with our state and local partners; bringing that approach to regulations, has made a world of difference. The Clean Power Plan was an incredible success in terms of the way it was developed in close partnership between EPA HQ, EPA

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1436	1435	5/23/2017	For EPA data systems, web applications, information services - a huge obstacle to modernizing how we develop and maintain them is an apparent need for long-term strategies before any work can be done. For example, I recently heard a presentation about EPA OEI's plan to develop a strategy to provide digital services... A plan to develop a strategy - this happens a lot in EPA IT, can make the strategy obsolete before it's ever final, and is opposed to agile and "DevOps" methodologies that are successful in the private sector.	For data exchange, E-Enterprise for the Environment (https://www.epa.gov/e-enterprise) and the related Exchange Network should be made an Agency priority with associated resources and qualified FTE. *Quality, complete* data will make environmental protection so much more efficient and allow us to focus resources appropriately.	For EPA web applications and data systems, a free two-way communication tool like Trello might provide more real-time, user-friendly interaction and understanding of stakeholder priorities.	EPA OEI seems to be out of touch with program offices. It needs to be supporting the data systems, web applications, information services, and reusable services that the program offices, EPA regions, and their state/local/tribal partners need - rather than creating strategies and directives in a vacuum. Having occasional webinars to tell us what they're doing isn't enough - there needs to be regular two-way communication and support for the products/services most necessary to the Agency to support its mission.	The Facility Registry Service, managed by OEI, is way under-staffed, yet it could make data exchange so much more efficient for the regulated community and state/local/tribal partners by centrally managing information that is common to multiple systems and programs across the Agency. This would make data exchange more efficient, freeing up time for other activity, and give us better information to do our jobs. Additionally, OEI's System of Registries is a mess; services are repetitive/overlapping and difficult to search and use. Some of these registries have the potential to make us more efficient, but I don't think they've received the resources and qualified FTE that they need.	Appropriate numbers of FTE should be assigned to activities of mutual interest to EPA and other agencies/states, particularly in the realm of data collection and exchange; typically one person is assigned and is expected to build, manage, and communicate an activity almost on his/her own. As already noted, E-Enterprise for the Environment (https://www.epa.gov/e-enterprise) and the related Exchange Network should be made an Agency priority with associated resources and qualified FTE (these FTE should not just be in OEI but also from the program offices). Unfortunately, we may
1437	1436	5/23/2017	Despite a lot of improvements, we still do a lot of work on paper. Even when we are working with digital copies of documents, there is often not an IT infrastructure to easily transfer and track these documents between the divisions that need to work on them. This can cause inefficiencies and bottlenecks in our workflow. Additionally, our digital files are saved in many unconnected databases. Thus to do our daily work you may have to access many different databases to find information on one product registration. An overarching IT infrastructure that allows for a truly paperless office, that also allows for the transfer, tracking, and storage of digital information would greatly increase our efficiency. It would also make accessing information on previous work much simpler, and help to ensure consistent decisions are made across chemicals and registrations.		A more comprehensive IT infrastructure would make it easier to share our information with our government partners. This would make it easier for them to access certain information, reducing their need to duplicate our work, or their need submit questions to us. It would also help to make our work more transparent. A public facing side of this system would allow anyone to search across products to answer questions about what products they can use, and about all registrations in general. An electronic product registration system (which is in the work, but still needs to be completed) would be a large part of such an infrastructure. This would allow for better communication with the registrant, help us to improve the quality of labels, fill data gaps on label, and would decrease our need to make assumptions about label language. Once this system is fully functional, it will decrease the time needed for	The improvements to IT infrastructure discussed above would reduce costs and inefficiencies, and allow us to fulfill our mission more easily.	Use of open source code and adaptable technologies (such as APIs) would allow us to continually update our databases and how we access them. Currently, we are limited by the capabilities offered by our service providers. When a system becomes outdated or we decide to switch service providers we have to figure out how to migrate all our data to a new system. The use of open source code and adaptable technologies would allow us to constantly update our IT as our needs and technologies change.

1438	1437	5/23/2017	Paper concurrences for enforcement actions: This may be effective, but it is not efficient. We should be able to concur on documents electronically. This would facilitate easier review, eliminate paper waste generated when changes are made, allow parties to know the location of the document while it is being reviewed, and lead to more timely enforcement actions. Allow for (or require) electronic submission from Respondents: This eliminates bulky paper submissions and would bring us a step closer towards electronic record keeping.		Share/advertise tools and online resources on EPA's website that are already publicly available but may not widely used outside of the agency (this may be specific to the Region / states within the Region). Highlight on EPA's website links to the Regional EPA webpages that share information specific to the states in that Region.			
1439	1438	5/23/2017	OGC review of Regional SIP actions for consistency-- not all issues are equal.	Region 7 Air program works collaboratively and cooperatively with our states, tribes and local communities to be pragmatic and follow the rule of law. I believe that there are unrealistic expectations from HQ related to making sure all state actions are consistent in the approach, which neglects the concept of state and local air agencies developing solutions for their unique problems. NPMs should clarify the environmental principles in which all actions must have.	Streamline the review process of state air program actions by reasserting the delegation to the regions to take action. When HQ and OGC are involved, 2-3 month issues turn into 2 -3 year issues. We spent too much time trying to create a "perfect" solution that everyone can live with and the environmental measures become secondary in decision making.	Create centers of excellence... why does every region need their own expertise related to modeling, emissions inventory.	develop common technical specifications/catalog of approved information management options and technology. Make records management and retention common sense. Why should the EPA not have an approved/certified plan for electronic signature across all Agency programs and actions.	Air quality modeling, work to build access to data centers across firewalls to collaborate on the development of attainment demonstrations. Why should both EPA and the states have to create data, systems, separately?
1440	1439	5/23/2017				Some program offices have insufficient (non-administrative) staff to efficiently execute statutory requirements. Staffing should be increased for those offices, such as in the applicable divisions within OAQPS. Increased output will pay for itself beyond the additional costs of staffing.

1441	1440	5/23/2017	Design internal EPA information systems - People Plus, Travel, Employee Schedules, Transit Subsidy tracking -- so that all systems "talk" to each other. This would free up first line supervisors to manage rather than spend way too much time on these administrative tasks -- much of which is redundant and could be streamlined. Our internal procedures need to be consistent and legal.	Regulate the entire environmental footprint of facilities -- look at all impacts rather than prescriptive and narrow regulation. Take a multi-media holistic approach to environmental regulation. Seriously consider and take to heart the environmental protection paradigm outlined by Daniel J. Fiorino in his 2006 book, the new environmental regulation. Many of EPA's statutes need to be modernized to address current environmental issues like climate change. Many of our statutes are out of date.	Be consistent.	Adopt an integrated multi-media approach to environmental protection.		
1442	1441	5/23/2017	Travel Comp Time Approvals are currently done on paper and later reflected in People Plus. This process needs to be updated because it is archaic and a complete waste of time. You end up wasting 30 min of senior management time in order to get credit for spending 30 min in a car. Please connect travel comp time--and regular comp time--directly with People Plus, the way that annual leave and sick leave are requested and approved.	Expand the community-driven work in the Regions that was successful through the Making a Visible Difference in Communities Efforts. When we have Regional staff serving as partners and liaisons with states, tribes, communities it is clear how little value-added many HQ staff/programs actually are.	Give communities/regional areas one liaison who will work with them in a cross-programmatic capacity. Each focus community currently has an EPA lead that is a regional staff person, we can expand this approach to other communities, and because we cannot cover each city individually we can also have staff people who cover larger jurisdictions like counties. Hire more interdisciplinary, policy folks. The regions are full of engineers that do not have the skills to provide good customer service.	YES. #1 STOP PARTICIPATION IN CFC. EPA staff are PAID to organize events to collect donations. This is unacceptable. We can reduce the amount regional staff that work on OARM/OEI related efforts, for example the training officers, HR reps, finance officers. There are many people in those regional divisions that are unnecessary. They create work for others rather than benefiting the organization. Many are walking around collecting mail and passing around paper forms, all tasks could be automated. We also do not need an Environmental Justice Working Group.	YES. Reporting our time, sharing our schedules, and working with people who are at an AWL could all be made easier by modernizing our current processes. SF52 process should also be updated. Too many people are involved in process, could be streamlined.	Take a community-driven approach. Do not let environmental engineers dictate the policies by which we run our agency.

1443	1442	5/23/2017	The lack of consistency in budgets from year to year have made it difficult to plan ahead in order to address training needs and do simple things like meet face-to-face with federal, state, and local stakeholders throughout the region (this has been a trend through multiple administrations). The uncertainty surrounding the proposed FY18 budget is exacerbating these conditions in addition to creating fear in the workplace that inevitably leads to distraction. I would suggest that addressing questions such as the ones in this survey prior to establishing or proposing drastic cuts to EPA programs and staff would be optimal. My experience in a decade of working in this agency is that a majority of the employees here already strive to meet the Administrator???s goal of protecting the environment while being pro-economy. The continuing restrictions placed on the EPA workforce has actually limited our stakeholder interactions, and I don???t see that ending as a result of the proposed	My answer to question 1 actually addresses this issue. Physical presence and availability of staff are essential to these partnerships. Cutting programs and employees before properly addressing the answer to these questions will inevitably set the agency up for failure.	My answer to question 1 actually addresses this issue. Physical presence and availability of staff are essential to providing the level of customer service that the public and stakeholders deserve. Cutting programs and employees before properly addressing the answer to these questions will inevitably set the agency up for failure.			
1444	1443	5/23/2017	****my apologies for typos in these answers as I do not have time to review these before sending them***** Too many layers of bureaucracy to go through. We need a flatter, more streamlined organization. During the Clinton-Gore reinventing-government initiative, many EPA office eliminated a layer of management on paper, but in practice the layer remained. OGC is an excellent example of this, but other offices did the same thing. They simply called the eliminated layer "team leaders" or "practice group leaders" rather than supervisors. Same function with the exception that they did not provide ratings. No improvement in efficiency. Most management best practices in the private sector find that flatter organizations are higher performing organizations. Eliminating middle management and focusing some of those savings on more people to do that work and the rest of the savings at	The agency's processing of requests made by Tribes takes far too long. In response to an old IG report, the agency put together a "strategy" document that was to speed up processing of "treatment as a state" applications under federal statutes. That speed up largely has not occurred, however. We need to set clear deadlines for processing of these applications. It is good for Tribes and States as it provides quicker resolution of outstanding issues, promotes regulatory certainty for business to determine what is the regulatory agency the need to interact with, and ensures that, if litigation does occur, it occurs more quickly and can be resolved sooner.	See question #2 answer, above. It directly applies here as well. In addition, We need to write our regulations so that they are easier to understand. Even complex issues can be written more clearly. I'm an attorney, and when I read our regulations, half the time I do not know what they mean. I can only image the average small businessman or farmer who needs to understand what his or her obligations are under the law, and simply cannot because of our incomprehensible and excessively cross-referenced regulations. A small farmer or small businessman should not need to hire a $400+ per hour lawyer just to understand what they need to do to comply with the nation's environmental laws.	The EPA Office of General Counsel is very top-heavy in the management ranks. The office is staffed largely by GS-15 employees, who, as a class of employees, are supposed to require minimal supervision to get their work done. Despite this, OGC has increased the number of both SES and GS-15 managers in recent years, thus reducing efficiency and increasing budget demands. For example, all OGC law offices recently brought on board a Deputy Associate General Counsel. This is a GS-15 manager to assist the SES manager. For OGC's larger law office like the General Law Office or the Air and Radiation Law Office, it may make sense to have an additional layer. But for the smaller office like the Solid	Our computer technology here sucks. Additionally, the IT contractor that provides tech support is awful. Frequently problems are not fixed in a timely manner or the user is blamed. The contract for IT services lacks important performance measures. For the performance measures that it does have, frequently the contractor is not held accountable. There is a view that we cannot fire an underperforming IT contractor because that would be overly disruptive to the agency. But that thinking fails to recognize that an inability to get the work done due to terrible IT services is disruptive, just over a longer period. But when you add up that longterm disruption,

1445	1444	5/23/2017	No comment	One pragmatic way for achieving better environmental results from partnering with states, tribes, local communities or the private sector would be by identifying communities with greatest environmental needs for help, linking those needs to EPA's core philosophies. We would then develop or enhance existing collaborations with our partners under key priority areas.	Attentively listening, thoughtfully and timely responding in our regular contacts with our stakeholders. Frequently we are perceived as bureaucratic and insincere.	The regions are in the front line where a lot of the environmental work is being done. This implies to me that the regions are best positioned to identify vulnerable areas locally with greatest need for greatest beneficial impact to address most urgent pollution related issues. Perhaps a bottom up approach connecting problem areas with appropriated funding might work more efficiently in addressing environmental problems sooner - this would be in contrast to, as I see it, working from different pots of funds from different parts of the agency to do what one can do in very limited ways.	A lot of new technology is now getting in the hands of communities. We need to do better in common sense transparency helping bridge communication gaps with our citizens when informing about the science effect of our work on the ground in lay-terms fashion.	We are very compartmentalized and this is frequently challenging for outsiders of EPA. From a stakeholder point of view wanting to work best with agencies at every level of government, it is like a maze. This is probably one reason why it is frequently viewed that regulatory agencies' doors seem wide open to the industries they regulate. Larger regulated entities use professionals that know how to navigate the system. Smaller businesses and the public sector in communities and the like are not as fortunate. Clear navigational centralized access for
1446	1445	5/23/2017	Documents currently routed for review and approval using paper copies could instead be routed electronically using OneDrive/SharePoint.	Avoid supporting the false narrative (put forth by industry) that EPA is to blame where such partnerships have become adversarial or less than collaborative.	Based on my experience working at EPA and in the private sector, EPA already goes to great lengths to serve and accommodate states and locals. To better serve the regulated community and the public, more staff/time/resources should be devoted to drafting clear and thorough rulemaking and policy documents.	Better utilization of electronic communication.	Documents currently routed for review and approval using paper copies could instead be routed electronically using OneDrive/SharePoint.	

AMERICAN OVERSIGHT

1447	1446	5/23/2017	The many systems for managing personnel components... For example, if I'd like to telework episodically and take a few hours of leave on the same day, I have to: 1. submit a telework request form (which is electronic, but has several steps in itself...), 2. submit an absence request 3. enter the hours of leave I will be taking on the telework request form 4. enter telework hours on electronic worksheet 5. enter leave hours on electronic worksheet. If something changes and I need to adjust any of this information, I must ask my supervisor to "return" my electronic request forms, and begin from step 1.... I also log my own hours because I know that I cannot trust the timekeeping systems (which are not only delayed in updating calculations but sometimes make mistakes). Seems like with the technology we have, there is no reason to have these outdated personnel systems! Have a single system that will be automated and smart for managing time, leave, payroll, etc.	Elevate environmental protection's importance in national and state politics? Currently, many states view environmental protection as an adversary! In the absence of increase in funding, the EPA's leadership must stand behind their staff in requesting that states and tribes provide clear workplans that include ENVIRONMENTAL outcomes that will result from federal dollars spent. States should oblige EPA's requests for additional information and/or improvements on those plans and environmental outcomes. The relationship between states and EPA is theoretically supposed to be cooperative, but in many cases the states do not cooperate with EPA's staff. Often, issues that could be resolved at the staff level quickly get elevated by the states' management, past EPA's staff, directly to EPA's	Have EPA provide good and clear (and timely/relevant) regulation and guidance!!! That's the agency's purpose.	EPA is already pretty bare-bones... You'll need to make some investments to reduce inefficiencies.	I personally feel pretty well supported in terms of technologies and the freedom to seek out new processes. Others who do not have updated computers and software would certainly benefit from that. The only thing that could make me better at my job would be "more time" - or additional colleagues to take over part of my workload so I can devote full attention to only a few projects.	Aren't we already doing that? EPA is so bare-bones that everyone is pretty good about not duplicating work...
1448	1447	5/23/2017	We are currently getting no communication from Administrator's office through our AA-ship and down to our other Headquarters offices. It is difficult to know what to communicate about current actions pending or other activities to state agencies.	Programs with proven track records that can be replicated are the Clean Diesel Program (Diesel Emissions Reduction Act-DERA) and the Advance Program. These voluntary efforts have produced real environmental results over their lifetimes and should be continued and built upon.	Reduce Headquarters oversight on permit actions and communications with our state agencies. This causes delays in the overall permitting process.	CONCUR travel system and contracts should be renegotiated to reduce the fees charged for travel authorizations, travel vouchers and other associated fees (hotel bookings, flight changes, etc.)	There are too many changes being initiated with the EPA webpages. Large amounts of useful and historical information is being deleted or archived so that it is difficult for EPA staff or the public to find it and access it.	Everything EPA does cannot be delegated to the state or local agencies. States have resource and budget issues that are affecting their ability to complete their essential work already. Delegating more activities that they may not want does not help them or the environmental program.

AMERICAN OVERSIGHT

	I
1447	EPA provides the option for a credit hour schedule - this allows employees to work "overtime" to get time-off without the agency having to pay additional salary... This really is a win-win for both. Employees get more work done and the agency saves money. This also helps with the work-life balance which results in better employee morale, thus better productivity.
1448	EPA has completed a large number of LEAN projects and efficiency efforts over the last several years. These need to be relayed across the Agency so we do not reinvent the wheel on something that has already been completed or evaluated.

AMERICAN OVERSIGHT

1449	1448	5/23/2017	Finding the information that is spread across our agency's internal resources is very difficult and wastes countless hours of our employees. Every organization has it's own intranet and SharePoint has grown exponentially that it's nearly impossible to find content that lives at the agency level. Centralizing agency content in to a single intranet platform, where content is reusable and relatable would ensure that users only access content that is accurate and current. While the implementation of SharePoint created a way for users to quickly share documents internally and externally, it has grown so much that it's impossible to find anything. Significant features of SharePoint don't work (search!) and there's no way to collaborate across sites. Each organizational site collection creates it's own silo. Let's ensure that SharePoint is used as our governance intends - a collaboration tool and not a dumping ground for files.			In mid-2016, the Federal Source Code policy was released, requiring agencies to release the code for anything custom-developed by the federal government in an effort to promote re-use across government agencies. Using open source technology not only makes meeting this policy easier, it is already the practice in open source. By focusing on open source technology first, we would increase our innovation and efficiency. Adopting open source forces the adoption of the tools and technologies of modern software development.	The adoption of a standard intranet strategy and platform across the agency is necessary if the agency wants it's internal information resources to be current, accurate, and trust-worthy. The agency currently allows regions and program offices to use a multitude of platforms to manage their internal websites. With no standard platform, the agency wastes considerable time and resources. Different platforms also limits agency employees from learning from one another, sharing and re-using solutions, and developing a community that supports innovation and growth. Drupal is a proven content management system. It has	
1450	1449	5/23/2017	One of the biggest hurdles I now face in conducting my job efficiently and effectively are the new contract requirements that are being leveraged on us by the contracting officers. We had an original system, ATGS, the was easy to use, streamlined and EFFECTIVE. We have now been told that this system is not good and that we have to use the EAS system. However, I can not track the work orders using EAS, only the Contracting Officer can do that. I also now have to submit an IGCE every time I increase the budget by >$2500. It does not make sense to me that it is okay to assign work to the same contractor, using the same contractor for years without doing this, then a new CO comes in and interprets the FAR differently and makes us do this additional work. I used to be able to assign work to our contractor in a matter of minutes, NOW it takes my hours to prepare the paperwork and then wait for 2-5 days (sometimes longer) for CO approval. This is ridiculous! In our Region (10) we are working on a	I believe I have wonderful partnerships with the states and tribes that I work with. I think the key to that is good communications.	I think that the funding decisions for grants and cooperative agreements, should be made at the regional level, not at Headquarters. All of the Regions should be allotted a certain amount of funding and then be allowed to decide, without interference, how that funding is spent. We are the closest to the recipients, we should be allowed to allocate the funding as we see fit.	Please see my answer to Q1 above. In addition, we continue to add new requirements on grants and cooperative agreements as programs grow. Personally, I don't see a lot of value added for some of these. For example, the "light refreshments" requirement. We now have to complete a special form for that. These light refreshments usually only cost ~$200. The only reason we have to do this is because somebody got some bad press for hosting a reception a few years ago, when their government overseer was not paying attention. So now we all have to suffer...	I don't think we need new technologies, but I think the ones that we currently have need to work better. For example, "SharePoint". We also need training on how to use these technologies, which we don't seem to have funding for.	I believe the programs I work on are already well aligned with the appropriate state agencies.

AMERICAN OVERSIGHT

	I
1449	Adopting an "open source by default" policy would severely limit the amount of technical debt the agency would take on with each tool that it develops. Standardization of a single platform would reduce costs and improve user experience. Enforcing the governance that supports these efforts is imperative. EPA is the only agency I've worked at where governance and policies are rarely enforced. Policies are put in place to improve efficient and save money. If these policies are not enforced, we will continue to waste tax payer dollars by investing in multiple technologies and creating mounds of technical debt we will not be able to manage.
1450	Common sense?

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1451	1450	5/23/2017		I transferred to EPA Region 10 from another EPA Region and firmly believe that the EPA Region 10 model of having staff in operations offices close to the State Environmental regulators helps develop a wonderful and cooperative relationship - not that this can't be developed from a distance but when you meet directly at least once per month this really helps and does not cost travel money if the employee is already nearby.	EPA employees are very dedicated to doing the best work they can to protect human health and the environment. Employees can be more effective if they are given the time and travel dollars to meet directly with the stakeholders.	I think all agencies need to communicate better with each other to leverage federal dollars effectively. There used to be an initiative called Strong Cities, Strong Communities (SC2) that helped facilitate federal collaboration effectively.		Regular meetings at the staff level could help. Not all employees at all agencies realize what the others are doing and if they are able to understand this better collaboration and leveraging of resources can occur.
1452	1451	5/23/2017	Since the change in administration, oversight from Washington has increased tremendously, but there has been no justification for it. This effectively slows down our ability to effective, efficient public servants.	EPA has been successful partnering with states, tribes, local communities and the private sector. These entities do not have the capacity to assume many of the programs we oversee and help them implement. More resources (e.g., staffing and funds) will help us achieve better environmental results.	We can provide better customer service by providing information based on sound science. For example, making false statements that question climate change just diminishes our credibility and prevents us from ensuring clean air and clean water.	I believe your question is premature. I honestly don't think the Trump Administration understands the roles and responsibilities of EPA. I don't believe the administration understands the mandate of EPA to protect the environment and public health and safety. I don't believe the administration understands that economic prosperity and environmental protection go hand-in-hand. I don't this administration knows what it wants. So, how can you ask about changes at EPA when the administration doesn't understand our core mission?	We just hired young energetic graduates with an understanding of state of the art new technologies. It is part of succession planning. This makes us more efficient and effective....RIFing them makes no sense.	

AMERICAN OVERSIGHT

	I
1451	
1452	The messaging coming from the new administration has been insulting and degrading to EPA public servants that have devoted their careers to uphold the mission of environmental protection and public health and safety. It comes from an administration that doesn't understand the statutes under which we operate. I believe the new administration should adopt the best practices from other agencies and the private sector that respect the work and accomplishments of their employees.

AMERICAN OVERSIGHT

	A	B	C	D	E	F	G	H
1453	1452	5/23/2017	There is micromanagement over regular reports and the regulatory processes utilized in EPA, along with a constant focus on enforcement, rather than on technical assistance to ensure regulatory requirements are met. I would address this by eliminating OECA, and downsizing the enforcement organization, including attorneys. EPA attorneys also do not take enforcement actions - they are referred to the DOJ to pursue, which appears duplicative.	The states and private sector are much more knowledgeable, innovative, and creative on ways to obtain environmental results. They should be allowed to take the lead in protecting the environment, and EPA should stand back, listen, and learn. EPA should only ensure core regulatory requirements are being met, and let the states run environmental programs, even on tribal reservations located in those states.	EPA's overall focus should be on environmental problem-solving. EPA should decrease enforcement, and do more technical assistance where needed. There is too much effort from enforcement and management to score "brownie points" by doing enforcement actions and collecting fines, and calling it "protecting public health" rather than fixing problems. Being supportive to the regulated community and public would go much further in protecting the environment.	1) EPA is top heavy with management and attorneys - their numbers should be greatly decreased so there are more general staffers and subject matter experts to provide technical assistance to the regulated community, and work with states, communities, and other agencies to provide environmental protection. 2) Centralize all contracting, grant management, and financial services to one or two offices versus offices at HQ and in each region, much like human resources are centrally managed. 3) Many grant programs (such as tribal grants) spend thousands of dollars with no results and no accountability - they should be scrapped, or cut back as outlined in the FY18 proposed budget.	Electronic records management - there have been numerous EPA work groups to look at the issue, but additional cloud computing for records storage should be adopted. We also do not need complex numbering and organizational methods for record storage - it is causing too many duplicative records to be saved.	1) There are duplicative utility infrastructure support programs within EPA, USDA, and IHS - only one agency should administer utility infrastructure funding, not three or more. 2) Energy efficiency programs like vehicle fuel economy ratings and Energy Star for appliances should be administered by the Department of Energy, not EPA. 3) Too many times, EPA focuses only on public health issues and not the environment. A more holistic view of the world by partnering with the Department of the Interior and the Department of Agriculture on environmental issues
1454	1453	5/23/2017	Redelegation of TSCA program responsibilities from one organizational group to another has prevented implementation of the program in an efficient and effective manner. The original organizational group has implemented the program since its inception and has focused, experienced, and expert staff. Perhaps a minor shifting of FTE funding could have prevented the redelegation from a focused group of experts to a broad group of staff and managers lacking expertise in the program. Program expertise, consistency in implementation, faster site cleanups, and efficiency/effectiveness in working with the regulated community are factors in favor of returning the delegation to the original program.					

AMERICAN OVERSIGHT

	I
1453	ALL EPA employees should learn project management, and run their programs like projects, with more finely defined goals and outcomes. This could cut back on EPA program scope creep, with EPA following narrowly delineated regulatory parameters, and not creating policies and regulations that are outside Congressional intent.
1454

1457	1456	5/24/2017	We are audited to the point that we cannot function: As part of the Office and Research and Development???s SHEM Program, the XXXXXX is scheduled for an ORD-level SHEM Program Evaluation for fiscal year 2017. Your evaluation is being conducted ahead of your scheduled SSD Headquarter Safety, Health, and Environmental Management Audit in FY2018. STOP the audits to check up on audits of sites that have not had significant findings in many audit cycles, ORD adds too many layers of administration through the recent "administrative efficiency project" it did nothing but promote folks in DC to higher grades, reduced billets at L/C/O where in a lot of cases there was a justifiable need for a billet, and the project pushed a lot more work and surveys, and studies to the "boots on the ground" folks just trying to get the job done.					
1458	1457	5/24/2017				The practice of supervisors submitting timecards and supervisors approving timecards before the pay period is over ultimately results in supervisors and employees wasting a significant amount of time correcting their timecards in the future. This is because staff are expected to forecast their time, which is especially problematic in areas where flexible schedules are available. Because of this practice, staff and supervisors spend working hours trying to fix timecards every pay period. Recommend you conduct a study in R6 to really understand how problematic this is. A simple fix in asking staff to certify their timecards AFTER the time has been worked would eliminate this wasted time.

BNA: Indian to Get EPA Money for Lead Cleanup, Water Upgrades.

The EPA is giving the Hoosier State a loan of nearly half a billion dollars to upgrade its water systems, with plans to spend additional money to clean up a lead-contaminated site in the northwestern part of the state. EPA Administrator Scott Pruitt on April 19 visited Whiting, Ind., home of a former Federated Metals plant that is now a Superfund site. Pruitt said his agency would spend $1.7 million to address lead contamination at the former copper, lead, and zinc smelter.

Brietbart: Exclusive—Talgo: EPA Administrator Scott Pruitt Should Be Applauded, Not Attacked

Environmental Protection Agency (EPA) Administrator Scott Pruitt has unquestionably been the most effective official in President Donald Trump's administration. He has laid waste to Barack Obama's radical environmental legacy, which is why Democrats, the mainstream media, academia, environmentalists, and left-wing advocacy groups are in full-panic mode. Out of desperation, these zealots (aided by the media) are resorting to unwarranted character assaults to challenge Pruitt's integrity and diminish his authority.

Gulf Live: EPA Administrator Signs $107.6 Million Memorandum to Clean Mississippi Phosphates Site

The Environmental Protection Agency administrator Scott Pruitt signed an Action Memorandum for $107.6 million on Wednesday, accelerating the cleanup of the former Mississippi Phosphates Corporation (MPC) Site in Pascagoula. In January, Pruitt and his team added MPC to its Superfund Priorities List after the agency announced in August 2017 their intentions to recommend the site for the list because of the environmental hazard it posed to marine and human life in the City of Pascagoula. The Action Memorandum signed Wednesday selects a $71.6 million cleanup that will take place from 2018 through 2020, plus $36 million for ongoing wastewater treatment during the three-year cleanup period.

Indiana to Get EPA Money for Lead Cleanup, Water Upgrades

By: David Schultz, 4/19/18

The EPA is giving the Hoosier State a loan of nearly half a billion dollars to upgrade its water systems, with plans to spend additional money to clean up a lead-contaminated site in the northwestern part of the state.

EPA Administrator Scott Pruitt on April 19 visited Whiting, Ind., home of a former Federated Metals plant that is now a Superfund site. Pruitt said his agency would spend $1.7 million to address lead contamination at the former copper, lead, and zinc smelter.

Pruitt also highlighted a $436 million loan from the Environmental Protection Agency to Indiana through the agency's Water Infrastructure Finance and Innovation Act program, which provides low-cost financing for drinking water and wastewater

AMERICAN OVERSIGHT

infrastructure upgrades. The agency first announced last summer it had accepted Indiana's application for this loan as part of its first-ever round of financing under the program established in 2014.

The EPA said in an April 19 statement that the money would flow through to the state "once all needed processes are complete." The loan cleared a preliminary EPA environmental review earlier this year. This loan is one of 12 that the EPA granted through its first $2.3 billion round of financing through this program.

The agency's press office did not immediately respond to Bloomberg Environment's request for comment on what specific actions the EPA took on April 19 on the Indiana loan or about whether the loan has been finalized.

Pruitt Talks to Residents

The announcement came after Pruitt personally visited Whiting, which is on Lake Michigan, and spoke with people living near the contaminated Federated Minerals site.

"There was a woman who was a property owner waiting for them," Thomas Frank, an activist with the East Chicago, Ind.-based Community Strategy Group, an environmental justice advocacy coalition, told Bloomberg Environment. "Apparently her property tested high in lead and she was showing them where the tests had occurred,"

Pruitt was at the Indiana site about 10 or 15 minutes, Frank said.

Pruitt also made a stop lasting less than 20 minutes at the EPA's Region 5 headquarters in Chicago, Mike Mikulka, president of American Federation of Government Employees Local 704 union, told Bloomberg Environment.

Exclusive—Talgo: EPA Administrator Scott Pruitt Should Be Applauded, Not Attacked

By: Chris Talgo, 4/19/18

Environmental Protection Agency (EPA) Administrator Scott Pruitt has unquestionably been the most effective official in President Donald Trump's administration.

He has laid waste to Barack Obama's radical environmental legacy, which is why Democrats, the mainstream media, academia, environmentalists, and left-wing advocacy groups are in full-panic mode. Out of desperation, these zealots (aided by the media) are resorting to unwarranted character assaults to challenge Pruitt's integrity and diminish his authority.

The disingenuousness of these attacks is made evident by the silence of these same groups when several Obama-era federal agencies engaged in illegal and/or unethical activities. The fact very few Americans know the name "Richard Windsor" is proof of selective outrage by "good government" groups and the media. (Windsor is the name of a fake EPA employee created by former EPA head Lisa Jackson to skirt public-records laws.)

Thankfully, Pruitt is not letting ad hominem attacks distract him from his mission of implementing a "back to basics" agenda for EPA. Unlike most of his predecessors at EPA and his opponents on the left, Pruitt believes, "We can and we will achieve clean air and clean water and we will also have strong economic growth and job creation at the same time."

To accomplish these long-overdue reforms, Pruitt has focused on and been incredibly successful at implementing a "three E's" strategy: concentrating on the environment, economy, and engagement with state and local governments.

1. **Protecting the Environment**

AMERICAN OVERSIGHT

2.

Under Obama, the EPA became a highly politicized agency, one that had been captured by radical environmental groups. When Pruitt took office, he vowed to refocus the agency on its core mission: protecting the environment and staying out of politics.

In May 2017, Pruitt created the Super Fund Task Force "to provide recommendations for improving and expediting site cleanups and promoting redevelopment." As of this writing, EPA has already completed seven Super Fund site clean-ups.

Additionally, EPA is prioritizing drinking water problems, including the egregious lead problem that arose during the Obama era in Flint, Michigan.

2. **Sensible regulations that encourage economic growth**

Obama's two EPA administrators, Jackson and Gina McCarthy, instituted an unprecedented era of unnecessary, costly, burdensome rulemaking, undermining personal property rights and economic growth.

Fortunately, Pruitt has put an end to this. His highlights, which are many, include announcing that the United States will pull out of the Paris climate accord.

In 2016, Obama pushed the United States into the Paris climate agreement, which analysts found would reduce U.S. gross domestic product by more than $2.5 trillion and result in an average annual job loss of nearly 400,000 by 2035 compared to jobs projections without the accord.

Pruitt has been a staunch advocate of withdrawing from this fake "treaty," and his support for the idea surely contributed to Trump's decision to pull back from the Paris accords.

AMERICAN OVERSIGHT

In October 2017, Pruitt proposed repealing Obama's Clean Power Plan, a set of regulations that economists estimated would cost U.S. taxpayers $40 billion per year and produce no effect on global carbon dioxide levels.

Also in October, Pruitt issued a directive to end EPA's "sue and settle" practices, a scheme in which radical environmental groups sue EPA to impose their agenda and EPA chooses not to fight the lawsuit in order to satisfy radical environmentalists' demands.

Putting the interests of ordinary Americans ahead of special-interest groups, Pruitt declared in October 2017 "the days of regulation through litigation are over."

In another measure designed to protect consumers, Pruitt announced in March 2018 the EPA will no longer use "secret science" in crafting regulations. Going forward, EPA rulemaking will be transparent and based on good data—not ideology.

Most recently, Pruitt suspended for review the onerous Corporate Annual Fuel Economy (CAFE) standards Obama's regime rushed through near the end of his final term. These burdensome regulations mandated unachievable fuel economy standards and would have forced carmakers to produce vehicles Americans don't want—and for an extra $3,800 per vehicle and negligible environmental benefits.

3. **Engaging with state and local partners**

For decades, EPA has usurped power from state and local governments. Pruitt is reversing this disturbing trend by instituting "cooperative federalism." Under this program, EPA will coordinate with state and local governments, rather than dictating edicts. His track record so far includes his revision of the definition and implementation of Obama's 2015 Waters of the United States rule (WOTUS), which was overly broad and abusive. WOTUS effectively granted to the federal government jurisdiction over every puddle and tiny body of water on private land.

"EPA is restoring states' important role in the regulation of water," Pruitt stated when announcing the end of the rule.

AMERICAN OVERSIGHT

EPA is also establishing Compliance Assistance Centers to "help businesses, colleges and universities, local governments, tribes and federal facilities understand and comply with environmental requirements and save money," and it's introducing Next Generation Compliance standards to "reduce costs and saves time and resources, while improving compliance."

Under Pruitt, the EPA is no longer imposing onerous rules that stifle economic growth and bankrupt the country. Instead, Pruitt is enacting levelheaded regulations that strike a proper balance between protecting the environment and maintaining consumer freedom.

After little more than a year on the job, Pruitt has transformed EPA's culture and restored its mission. The EPA Swamp has been substantially drained, a huge setback for power-grabbing leftists. And it's primarily for that reason the left and mainstream media have succumbed to attacking Pruitt's character. Just imagine how apoplectic they will get if Pruitt is allowed to continue his record of success in the years ahead!

Gulf Live

http://blog.gulflive.com/mississippi-press-news/2018/04/epa_administrator_signs_1076_m.html

EPA Administrator Signs $107.6 Million Memorandum to Clean Mississippi Phosphates Site

By: Tyler Carter, 4/19/18

The Environmental Protection Agency administrator Scott Pruitt signed an Action Memorandum for $107.6 million on Wednesday, accelerating the cleanup of the former Mississippi Phosphates Corporation (MPC) Site in Pascagoula.

In January, Pruitt and his team added MPC to its Superfund Priorities List after the agency announced in August 2017 their intentions to recommend the site for the list

AMERICAN OVERSIGHT

because of the environmental hazard it posed to marine and human life in the City of Pascagoula.

The Action Memorandum signed Wednesday selects a $71.6 million cleanup that will take place from 2018 through 2020, plus $36 million for ongoing wastewater treatment during the three-year cleanup period.

"In just over a year, EPA has taken multiple important actions to accelerate the remediation of the Mississippi Phosphates Superfund Site," Pruitt said. "This memo reflects my commitment to addressing Superfund sites as quickly and safely as possible to ensure human health and economic activity in the surrounding areas are fully protected."

The cleanup plan identified in the Action Memorandum focuses on the closure of the East Gypsum Stack and the North Ponds at the West Gypsum Stack. The cleanup will eliminate storage of more than 500 million gallons of contaminated water on site and reduce the volume of water requiring treatment by an estimated 98 percent.

Design of the closure system is underway. EPA is evaluating the possible use of local dredge spoil to cap and close the East Gypsum Stack.

In response to comments received during the public comment period, EPA is also evaluating the use of engineered geosynthetic turf products as an alternative cap/cover system in its design.

The MPC Site is a former diammonium phosphate fertilizer plant that began operation in the 1950s. The facility ceased operations in December 2014 under Chapter 11 bankruptcy protection, leaving more than 700,000,000 gallons of acidic, nutrient-rich wastewater stored at the facility.

The wastewater--if improperly discharged--may be toxic to fish and other forms of marine life and can also cause algal blooms. Previous releases of untreated wastewater

AMERICAN OVERSIGHT

from the site (before EPA took over wastewater treatment operations) resulted in fish kills.

EPA currently oversees wastewater treatment at a rate of approximately 2-4 million gallons per day--at a cost of over $1 million per month--due to the high volume of wastewater requiring treatment. EPA has expended approximately $17 million to treat wastewater at the site.

EPA assumed control of wastewater treatment operations at the former MPC fertilizer facility once the MPC Environmental Trust, which owns the property, ran out of funds in February 2017.

"Pascagoula has lived with this catastrophic issue for years with no response," Mayor Dane Maxwell said. "Since President Trump took office and under Administrator Pruitt not only have we had a response, but it has been from the highest levels. Making Mississippi Phosphates cleanup a priority is very important for the entire Gulf Coast."

Daily Caller

Associated Press Publishes Misleading Headline on Scott Pruitt's Travel Arrangements

By: Jason Hopkins, 4/19/18

AMERICAN OVERSIGHT

The Environmental Protection Agency is pushing back against The Associated Press' reporting on Administrator Scott Pruitt's private travel.

The AP released a report on Wednesday titled: "EPA chief sat in coach when not flying on taxpayer's dime." The headline — and the opening lede — suggested that the leader of the EPA makes more economical decisions when taking personal flights, as opposed to his travel when conducting official business.

Pruitt has received criticism for flying first class on the taxpayers' dime, an arrangement he says is made for security reasons. The AP story centered on how Pruitt flew coach on Southwest Airlines when he made personal trips to Oklahoma in August and September.

However, there is one major detail included about Southwest Airlines: They do not offer first-class travel. This detail was included in the body of the AP article, but the headline and angle of the report framed Pruitt as a hypocrite when it comes to personal travel.

"Despite their misleading headline, the Associated Press knowingly reported that that there are no premium-class seats on Southwest Airlines," read a Wednesday statement from the EPA. "The fact is: Administrator Pruitt consistently follows the same security measures, which is not about sitting in first class but sitting near the front of the plane. It's impossible to fly first-class on Southwest Airlines, however Administrator Pruitt always sat in the first few rows of the aircraft."

This was not the only detail the EPA took issue with. The AP claimed on Twitter that it confirmed their story with the agency.

However, EPA spokesperson Jahan Wilcox said this tweet is false and that the agency never confirmed their report. "The same security procedures are followed whether Administrator Pruitt is on official or personal travel," the official statement provided to the AP read. The statement neither confirmed nor denied the story.

AMERICAN OVERSIGHT

Pruitt, who has racked up thousands of dollars in travel expenses since taking the helm of the EPA, has received immense criticism for taking first-class flights on taxpayer dollars. Democrats and other Pruitt opponents have used news of his expensive flights to push for his ouster. The EPA, however, maintains more expensive flights are necessary for his safety.

Pruitt has been the target of aggression and profane language at airports since leading the agency.

"He was approached in the airport numerous times, to the point of profanities being yelled at him and so forth," Henry Barnet, director of the EPA's Office of Criminal Enforcement, told Politico in a Feb. 15 report. "We felt that based on the recommendation from the team leader, the special agent in charge, that it would be better suited to have him in business or first class, away from close proximity from those individuals who were approaching him and being extremely rude, using profanities and potential for altercations and so forth."

Tulsa World

http://www.tulsaworld.com/news/usworld/scott-pruitt-showed-penchant-for-travel-drivers-even-before-being/article_4aa07e53-b8ff-5241-a223-58d1829655d2.html

Scott Pruitt Showed Penchant for Travel, Drivers Even Before Being Names EPA Head

By: Ellen Knickmeyer and Sean Murphy, 4/20/18

Scott Pruitt's penchant for travel and concerns about security were notable even before he became head of the Environmental Protection Agency, according to newly obtained records that show that as Oklahoma's attorney general he frequently traveled out-of-state for appearances before conservative groups and used an office investigator as a driver.

As Oklahoma's top prosecutor from 2011 to 2016, Pruitt was raising his profile nationally as a conservative in favor of rolling back regulation and federal authority.

AMERICAN OVERSIGHT

Records obtained by The Associated Press show Pruitt traveled extensively as Oklahoma's attorney general, taking 18 out-of-state trips in 2015 and 2016, for example, including 11 to Washington, D.C. Although some travel expenses were reimbursed by conservative think tanks where Pruitt spoke, records show no sign of reimbursement for several trips involving appearances before them.

Immediately after taking office as attorney general, Pruitt started using a full-time driver who chauffeured him in a large black SUV from his home in Tulsa to the office in Oklahoma City, about 90 miles away.

Pruitt's daily calendars show the driver — variously shown on the records as "driver" or "agent" — was often an office investigator, a licensed law enforcement officer who typically investigates crimes for the agency.

"It appears he created his own security detail," said Gary Jones, Oklahoma's state auditor and a fellow Republican.

As EPA administrator, Pruitt has been under intense scrutiny since it was first revealed last month that he had stayed last year in a bargain-priced Capitol Hill condo tied to a fossil-fuels lobbyist. Multiple investigations have been launched by government watchdogs and congressional committees looking into luxury travel expenses, outsized security spending and massive raises awarded to political appointees.

Lincoln Ferguson, a former spokesman for the attorney general who now serves as a senior adviser to him at the EPA, said if Pruitt's out-of-state travel was strictly for political purposes, it would have been paid for by campaign funds. But travel records show the trips were arranged through a state-contracted travel agency, and few show any reimbursement was made.

In Oklahoma, Pruitt routinely made the three-hour commute from his home in Tulsa to the state Capitol in Oklahoma City during the working day, according to the calendars.

AMERICAN OVERSIGHT

The entry for Dec. 7, 2015, for example, shows the entry: "8:15 to 9:45, depart Tulsa for OKC" and "3:30-5, depart OKC for Tulsa."

That was despite Pruitt expanding his office's Tulsa branch during his time. The AP reported in December 2016 that the move to bigger, pricier offices in Tulsa were part of a 40 percent increase in his office's expenses as attorney general. Pruitt also added nearly 60 employees to the attorney general's office.

By contrast, Pruitt's predecessor, Democrat Drew Edmondson, who held the attorney general post for 16 years, said he typically used a four-door sedan and drove himself to events.

Ferguson, the senior adviser to Pruitt, said "there was no wasted time" on Pruitt's commutes between Tulsa and Oklahoma City.

"He was working, reviewing documents, on the phone," Ferguson said.

Overall spending on travel by Pruitt's office averaged about $270,000 a year in his last four years as Oklahoma's attorney general, up 26 percent from his predecessor's final year in office. The figures do not include a total for Pruitt's trips alone. The attorney general's office spent $201,000 on travel during his predecessor's last year in the office.

The calendars are heavily redacted and entire days are blacked out.

But the records do show Pruitt frequently traveled to Washington to speak to groups including the Federalist Society; the Club for Growth, a free-enterprise advocacy group; and an anti-abortion rally. He also made similar appearances elsewhere, such as one before the small-government FreedomWorks group in Cleveland on "Battling the

AMERICAN OVERSIGHT

Regulatory State."

"If it's not state-related, then the state should not be responsible for" the cost, said Jones, the state auditor. "You can't use any public assets for personal or political reasons."

Records show many of the trips occurred during the workweek, when Pruitt was drawing a state salary of $132,000. Oklahoma broadly bans first-class tickets for state employees. The travel records show only one first-class flight for Pruitt, with a scrawled note on it showing Pruitt's campaign paid for it.

Edmondson, who is now running for governor, said his travel expenses as attorney general typically covered national and regional conventions of attorneys general.

"I think you'll find that his out-of-state travel would far exceed any other attorney general" in Oklahoma, said former Gov. David Walters, a Democrat, who recalled Pruitt speaking before local clubs on topics such as the Obama administration, rather than crime or consumer fraud in Oklahoma.

Conservative groups hosting Pruitt appeared to reimburse most of Pruitt's flights and some other direct state travel expenses after 2015, and some beforehand.

But on one trip in January 2016, Pruitt billed taxpayers more than $1,000 for a trip to Washington in which he held separate meetings with executives of three conservative think tanks: the APP Foundation, The Federalist Society and Club for Growth. There was no record of reimbursement for that trip. Three weeks later, Pruitt spent the weekend in California for a dinner and a speech to The Federalist Society, which reimbursed the state for his travel.

Associated Press

AMERICAN OVERSIGHT

https://apnews.com/e29d5563fc0c45caa4faa6b3749405a6/Comey-memo:-Trump-complained-about-Flynn's-'judgment-issues

In Comey memos, Trump fixates on 'hookers,' frets over Flynn

By: Mary Clare Jalonick, Eric Tucker, and Chad Day, 4/20/18

In a series of startlingly candid conversations, President Donald Trump told former FBI Director James Comey that he had serious concerns about the judgment of a top adviser, asked about the possibility of jailing journalists and described a boast from Vladimir Putin about Russian prostitutes, according to Comey's notes of the talks obtained by The Associated Press on Thursday night.

The 15 pages of documents contain new details about a series of interactions with Trump that Comey found so unnerving that he chose to document them in writing. Those seven encounters in the weeks and months before Comey's May 2017 firing include a Trump Tower discussion about allegations involving Trump and prostitutes in Moscow; a White House dinner at which Comey says Trump asked him for his loyalty; and a private Oval Office discussion where the ex-FBI head says the president asked him to end an investigation into Michael Flynn, the former White House national security adviser.

The documents had been eagerly anticipated since their existence was first revealed last year, especially since Comey's interactions with Trump are a critical part of special counsel Robert Mueller's investigation into whether the president sought to obstruct justice. Late Thursday night, Trump tweeted that the memos "show clearly that there was NO COLLUSION and NO OBSTRUCTION."

The president also accused Comey of leaking classified information. The memos obtained by the AP were unclassified, though some portions were blacked out as classified. Details from Comey's memos reported in news stories last year appear to come from the unclassified portions.

In explaining the purpose of creating the memos, which have been provided to

AMERICAN OVERSIGHT

Mueller, Comey has said he "knew there might come a day when I would need a record of what had happened" to defend not only himself but the FBI as well.

The memos cover the first three months of the Trump administration, a period of upheaval marked by staff turnover, a cascade of damaging headlines and revelations of an FBI investigation into potential ties between the Trump campaign and Russia. The documents reflect Trump's uneasiness about that investigation, though not always in ways that Comey seemed to anticipate.

In a February 2017 conversation, for instance, Trump told Comey how Putin told him, "we have some of the most beautiful hookers in the world" even as the president adamantly, and repeatedly, distanced himself from a salacious allegation concerning him and prostitutes in Moscow, according to one memo.

In another memo, Comey recounts how Trump at a private White House dinner pointed his fingers at his head and complained that Flynn, his embattled national security adviser, "has serious judgment issues." The president blamed Flynn for failing to alert him promptly to a congratulatory call from a world leader, causing a delay for Trump in returning a message to an official whose name is redacted in the documents.

"I did not comment at any point during this topic and there was no mention or acknowledgment of any FBI interest in or contact with General Flynn," Comey wrote.

By that point, the FBI had already interviewed Flynn about his contacts with the Russian ambassador, Sergey Kislyak, and the Justice Department had already warned White House officials that they were concerned Flynn was vulnerable to blackmail.

Flynn was fired Feb. 13, 2017, after White House officials said he had misled them about his Russian contacts during the transition period by saying that he had not discussed sanctions. The following day, according to a separate memo, Comey says Trump cleared the Oval Office of other officials, encouraged him to let go of the investigation into Flynn and called him a good guy. Flynn pleaded guilty to lying to the FBI and is now cooperating with Mueller's investigation.

AMERICAN OVERSIGHT

The memos reveal that days before Flynn's firing, then-White House chief of staff Reince Priebus asked Comey if Flynn's communications were being monitored under a secret surveillance warrant.

"Do you have a FISA order on Mike Flynn?" Priebus asked Comey, according to the memos, referring to an order under the Foreign Intelligence Surveillance Act.

Comey said he "paused for a few seconds and then said that I would answer here, but that this illustrated the kind of question that had to be asked and answered through established channels."

Comey's response is redacted on the unclassified memos.

The memos also show Trump's continued distress at a dossier of allegations — compiled by an ex-British spy whose work was funded by the Democratic National Committee and the Clinton campaign — examining potential ties between him and his aides and the Kremlin. Comey writes how Trump repeatedly denied to him having been involved in an encounter with Russian prostitutes in a Moscow hotel.

"The President said 'the hookers thing' is nonsense," Comey writes, noting that Trump then related the conversation with Putin about the "most beautiful hookers." Comey says Trump did not say when Putin had made the comment.

The documents also include the president's musings about pursuing leakers and imprisoning journalists. They also provide insight into Comey's personal and professional opinions. He judges the administration's travel ban to be legally valid, and he takes a swipe at former Attorney General Loretta Lynch, calling her predecessor, Eric Holder, "smarter and more sophisticated and smoother."

The memos were provided to Congress earlier Thursday as House Republicans

AMERICAN OVERSIGHT

escalated criticism of the Justice Department, threatening to subpoena the documents and questioning officials.

In a letter sent to three Republican House committee chairmen Thursday evening, Assistant Attorney General Stephen Boyd wrote that the department was sending a classified version of the memos and an unclassified version. The department released Boyd's letter publicly but did not release the memos. The chairmen issued a statement late Thursday saying the memos show that Comey clearly never felt threatened, and Trump didn't obstruct justice.

Justice officials had allowed some lawmakers to view the memos but had never provided copies to Congress. Boyd wrote that the department had also provided the memos to several Senate committees.

Boyd wrote in the letter that the department "consulted the relevant parties" and concluded that releasing the memos would not adversely affect any ongoing investigations. Mueller is investigating potential ties between Russia and Trump's 2016 campaign as well as possible obstruction of justice by the president.

Comey is on a publicity tour to promote his new book, "A Higher Loyalty." He revealed last year that he had written the memos after conversations with Trump.

He said in an interview Thursday with CNN that he's "fine" with the Justice Department turning his memos over to Congress.

"I think what folks will see if they get to see the memos is I've been consistent since the very beginning, right after my encounters with President Trump, and I'm consistent in the book and tried to be transparent in the book as well," he said.

Trump hires Giuliana, Two Other Attorneys Amid Mounting Legal Turmoil Over Russia

By: Robert Costa, Josh Dawsey and Rosalind Helderman, 4/19/18

Former New York mayor Rudolph W. Giuliani and two other former federal prosecutors joined President Trump's legal team Thursday following weeks of turbulence and struggles to find attorneys who would agree to represent the president in the ongoing federal probe into Russian election interference.

The reshuffling comes at a particularly tense juncture for Trump, who aides said is increasingly frustrated by special counsel Robert S. Mueller III's investigation and with the senior officials at the Justice Department.

The entry of Giuliani, an experienced attorney with a combative reputation, immediately raises questions about how Trump will engage with Mueller and the leadership at Justice. Some Trump advisers are concerned that the president could use his -executive authority to close or diminish the special counsel probe, which has spawned a parallel investigation in New York targeting his personal attorney.

"I'm doing it because I hope we can negotiate an end to this for the good of the country and because I have high regard for the president and for Bob Mueller," Giuliani said in an interview Thursday.

Trump said in a statement that Giuliani "wants to get this matter quickly resolved."

In recent days, the president has been regularly venting and speculating to aides about his legal status and the expected timeline for the Russia investigation to end, according

AMERICAN OVERSIGHT

to associates briefed on the discussions.

Rudolph W. Giuliani was an ardent supporter of President Trump during the 2016 campaign, and the former New York mayor was considered for the post of attorney general. (Mike Segar/Reuters)

Trump also loudly and repeatedly complained to several advisers earlier this week that former FBI director James B. Comey, former deputy FBI director Andrew McCabe and former Democratic presidential nominee Hillary Clinton, among others, should be charged with crimes for misdeeds alleged by Republicans, the associates said.

Although White House officials said Thursday that Trump has not called Justice Department officials or taken any formal action, the persistent grousing has made some advisers anxious, according to two people close to the president. A publicity tour by Comey to promote his book critical of Trump, "A Higher Loyalty," has attracted particular attention from the president, who has disparaged Comey publicly and privately.

Trump also complained this week about Supreme Court Justice Neil M. Gorsuch, saying the judge had proved too liberal in recent cases, according to administration officials who heard about the complaints. Associates said he was incensed that Gorsuch had voted against the administration on an immigration case and said it renewed his doubts that Gorsuch would be a reliable conservative. One top Trump adviser played down the comments as unhappiness with Gorsuch's decision rather than with Gorsuch broadly.

Giuliani, 73, brings a familiarity with several of the legal fronts that Trump is navigating. He is a former associate attorney general and a former U.S. attorney for the Southern District of New York, which is the office overseeing an investigation of Trump's personal attorney, Michael Cohen.

Trump counsel Jay Sekulow said Thursday that former federal prosecutors Jane Serene Raskin and Marty Raskin, a couple who manage a Florida-based law firm, have also agreed to join the legal team.

AMERICAN OVERSIGHT

Giuliani is certain to come under intense scrutiny for his role. His own pre-election activities two years ago have been the subject of criticism from Democrats, especially television interviews in which he suggested he had sources providing him inside information about the FBI's investigation of Clinton's private email server when she was secretary of state.

A Justice Department Inspector General report on the department's handling of the Clinton investigations is expected to be released in coming weeks and will probably include results of leak investigations regarding the Clinton probe.

Numerous other challenges face the attorneys who will work alongside Sekulow and counsel Ty Cobb — who have functioned as Trump's legal nucleus for weeks following the resignation of John Dowd, a legal veteran and the team's former leader. Dowd stepped down in March amid clashes over strategy and whether Trump should sit for a voluntary interview with Mueller. The legal team has often been beset by infighting.

"The big question is, how's he going to play with everybody else?" said a lawyer involved with the investigation who was not authorized to speak publicly. "Will he be combative Rudy, or will he play well with Mueller's team? Will he try to walk . . . back from the brink and answer the big question, which is whether the president will sit for an interview? And will Trump listen to him?"

Giuliani declined to say whether Trump has made a final decision on whether to sit for an interview with federal investigators. Trump has been mulling it for weeks, moving away from the idea after the home, offices and hotel room of Cohen were raided this month. Trump reacted angrily, calling it "disgraceful."

"It's too early for me to say that," Giuliani replied, when asked whether a Trump interview is unlikely to happen.

Giuliani also declined to discuss whether Deputy Attorney General Rod J. Rosenstein, who has been under fire from conservatives and oversees the Russia probe, could be

AMERICAN OVERSIGHT

fired by the president in the coming weeks.

"I'm not involved in anything about those issues. My advice on Mueller has been this: He should be allowed to do his job. He's entitled to do his job."

Giuliani said he formalized his decision in recent days, including over dinner last week at Trump's Mar-a-Lago resort in Florida. Giuliani and Trump spoke Thursday about the legal plan moving forward, along with Sekulow, whom he has known for years and called a friend. He added that he and Cobb also spoke, on Wednesday.

Giuliani — who will take a leave from his law firm, Greenberg Traurig, and is in the midst of a divorce from his third wife — said he would spend a "great deal of time" in Washington working with Trump but would continue to live in New York. He has been frequently been seen holding court at the Trump International Hotel in Washington, dining and drinking with friends and browsing for gourmet cigars.

Trump had considered Giuliani for attorney general and has said in recent weeks he needs a New York-based attorney. Many leading white-collar lawyers, such as former solicitor general Theodore Olson, have declined Trump's entreaties, often citing conflicts or expressing unease about the high-profile case.

Trump is also known to be a difficult client who does not always listen to his attorneys' advice, according to lawyers who know him. And Giuliani, once a top adviser, grew frustrated with his treatment during the transition and had receded from the inner circle.

As he has closely monitored cable-news programs chronicling his presidency and the Mueller probe, Trump has swatted away the notion that he cannot attract prominent attorneys. He has also spoken about his desire for a bolstered team and wondered aloud about the damage that Cohen's legal proceedings could bring, according to the associates briefed on the discussions, who requested anonymity to talk about them.

AMERICAN OVERSIGHT

Giuliani's arrival is part of a broader shift in Trump's inner circle toward the core allies and brusque and brutal style that defined his outsider presidential campaign and his business career. Beyond Mueller, aides said everyone and everything around Trump feels liable to become a target for his wrath as he grapples with difficult issues at home and abroad, in Syria and North Korea.

"What we've been seeing with the president is that he is picking A-level people that he knows are experienced but also know him well," said Trump ally Christopher Ruddy, the president and CEO of Newsmax Media, a conservative outlet. "One of the problems in the first year was that people didn't work out because they didn't know him and they didn't have experience for the position."

Brietbart: Exclusive—Talgo: EPA Administrator Scott Pruitt Should Be Applauded, Not Attacked

Environmental Protection Agency (EPA) Administrator Scott Pruitt has unquestionably been the most effective official in President Donald Trump's administration. He has laid waste to Barack Obama's radical environmental legacy, which is why Democrats, the mainstream media, academia, environmentalists, and left-wing advocacy groups are in full-panic mode. Out of desperation, these zealots (aided by the media) are resorting to unwarranted character assaults to challenge Pruitt's integrity and diminish his authority.

Gulf Live: EPA Administrator Signs $107.6 Million Memorandum to Clean Mississippi Phosphates Site

The Environmental Protection Agency administrator Scott Pruitt signed an Action Memorandum for $107.6 million on Wednesday, accelerating the cleanup of the former Mississippi Phosphates Corporation (MPC) Site in Pascagoula. In January, Pruitt and his team added MPC to its Superfund Priorities List after the agency announced in August 2017 their intentions to recommend the site for the list because of the environmental hazard it posed to marine and human life in the City of Pascagoula. The Action Memorandum signed Wednesday selects a $71.6 million cleanup that will take place from 2018 through 2020, plus $36 million for ongoing wastewater treatment during the three-year cleanup period.

Daily Caller: Associated Press Publishes Misleading Headline on Scott Pruitt's Travel Arrangements

The Environmental Protection Agency is pushing back against The Associated Press' reporting on Administrator Scott Pruitt's private travel. The AP released a report on Wednesday titled: "EPA chief sat in coach when not flying on taxpayer's dime." The headline — and the opening lede — suggested that the leader of the EPA makes more economical decisions when taking personal flights, as opposed to his travel when conducting official business. Pruitt has received criticism for flying first class on the taxpayers' dime, an arrangement he says is made for security reasons. The AP story centered on how Pruitt flew coach on Southwest Airlines when he made personal trips to Oklahoma in August and September.

Indiana to Get EPA Money for Lead Cleanup, Water Upgrades

By: David Schultz, 4/19/18

The EPA is giving the Hoosier State a loan of nearly half a billion dollars to upgrade its water systems, with plans to spend additional money to clean up a lead-contaminated site in the northwestern part of the state.

EPA Administrator Scott Pruitt on April 19 visited Whiting, Ind., home of a former Federated Metals plant that is now a Superfund site. Pruitt said his agency would spend $1.7 million to address lead contamination at the former copper, lead, and zinc smelter.

Pruitt also highlighted a $436 million loan from the Environmental Protection Agency to Indiana through the agency's Water Infrastructure Finance and Innovation Act program, which provides low-cost financing for drinking water and wastewater infrastructure upgrades. The agency first announced last summer it had accepted Indiana's application for this loan as part of its first-ever round of financing under the program established in 2014.

The EPA said in an April 19 statement that the money would flow through to the state "once all needed processes are complete." The loan cleared a preliminary EPA environmental review earlier this year. This loan is one of 12 that the EPA granted through its first $2.3 billion round of financing through this program.

The agency's press office did not immediately respond to Bloomberg Environment's request for comment on what specific actions the EPA took on April 19 on the Indiana loan or about whether the loan has been finalized.

Pruitt Talks to Residents

AMERICAN OVERSIGHT

The announcement came after Pruitt personally visited Whiting, which is on Lake Michigan, and spoke with people living near the contaminated Federated Minerals site.

"There was a woman who was a property owner waiting for them," Thomas Frank, an activist with the East Chicago, Ind.-based Community Strategy Group, an environmental justice advocacy coalition, told Bloomberg Environment. "Apparently her property tested high in lead and she was showing them where the tests had occurred,"

Pruitt was at the Indiana site about 10 or 15 minutes, Frank said.

Pruitt also made a stop lasting less than 20 minutes at the EPA's Region 5 headquarters in Chicago, Mike Mikulka, president of American Federation of Government Employees Local 704 union, told Bloomberg Environment.

Brietbart

Exclusive—Talgo: EPA Administrator Scott Pruitt Should Be Applauded, Not Attacked

By: Chris Talgo, 4/19/18

Environmental Protection Agency (EPA) Administrator Scott Pruitt has unquestionably been the most effective official in President Donald Trump's administration.

He has laid waste to Barack Obama's radical environmental legacy, which is why Democrats, the mainstream media, academia, environmentalists, and left-wing advocacy groups are in full-panic mode. Out of desperation, these zealots (aided by the media) are resorting to unwarranted character assaults to challenge Pruitt's integrity and diminish his authority.

AMERICAN OVERSIGHT

The disingenuousness of these attacks is made evident by the silence of these same groups when several Obama-era federal agencies engaged in illegal and/or unethical activities. The fact very few Americans know the name "Richard Windsor" is proof of selective outrage by "good government" groups and the media. (Windsor is the name of a fake EPA employee created by former EPA head Lisa Jackson to skirt public-records laws.)

Thankfully, Pruitt is not letting ad hominem attacks distract him from his mission of implementing a "back to basics" agenda for EPA. Unlike most of his predecessors at EPA and his opponents on the left, Pruitt believes, "We can and we will achieve clean air and clean water and we will also have strong economic growth and job creation at the same time."

To accomplish these long-overdue reforms, Pruitt has focused on and been incredibly successful at implementing a "three E's" strategy: concentrating on the environment, economy, and engagement with state and local governments.

1. **Protecting the Environment**
2.

Under Obama, the EPA became a highly politicized agency, one that had been captured by radical environmental groups. When Pruitt took office, he vowed to refocus the agency on its core mission: protecting the environment and staying out of politics.

In May 2017, Pruitt created the Super Fund Task Force "to provide recommendations for improving and expediting site cleanups and promoting redevelopment." As of this writing, EPA has already completed seven Super Fund site clean-ups.

Additionally, EPA is prioritizing drinking water problems, including the egregious lead problem that arose during the Obama era in Flint, Michigan.

2. **Sensible regulations that encourage economic growth**

Obama's two EPA administrators, Jackson and Gina McCarthy, instituted an unprecedented

AMERICAN OVERSIGHT

era of unnecessary, costly, burdensome rulemaking, undermining personal property rights and economic growth.

Fortunately, Pruitt has put an end to this. His highlights, which are many, include announcing that the United States will pull out of the Paris climate accord.

In 2016, Obama pushed the United States into the Paris climate agreement, which analysts found would reduce U.S. gross domestic product by more than $2.5 trillion and result in an average annual job loss of nearly 400,000 by 2035 compared to jobs projections without the accord.

Pruitt has been a staunch advocate of withdrawing from this fake "treaty," and his support for the idea surely contributed to Trump's decision to pull back from the Paris accords.

In October 2017, Pruitt proposed repealing Obama's Clean Power Plan, a set of regulations that economists estimated would cost U.S. taxpayers $40 billion per year and produce no effect on global carbon dioxide levels.

Also in October, Pruitt issued a directive to end EPA's "sue and settle" practices, a scheme in which radical environmental groups sue EPA to impose their agenda and EPA chooses not to fight the lawsuit in order to satisfy radical environmentalists' demands.

Putting the interests of ordinary Americans ahead of special-interest groups, Pruitt declared in October 2017 "the days of regulation through litigation are over."

In another measure designed to protect consumers, Pruitt announced in March 2018 the EPA will no longer use "secret science" in crafting regulations. Going forward, EPA rulemaking will be transparent and based on good data—not ideology.

Most recently, Pruitt suspended for review the onerous Corporate Annual Fuel Economy (CAFE) standards Obama's regime rushed through near the end of his final term. These burdensome regulations mandated unachievable fuel economy standards and would have

AMERICAN OVERSIGHT

forced carmakers to produce vehicles Americans don't want—and for an extra $3,800 per vehicle and negligible environmental benefits.

3. **Engaging with state and local partners**

For decades, EPA has usurped power from state and local governments. Pruitt is reversing this disturbing trend by instituting "cooperative federalism." Under this program, EPA will coordinate with state and local governments, rather than dictating edicts. His track record so far includes his revision of the definition and implementation of Obama's 2015 Waters of the United States rule (WOTUS), which was overly broad and abusive. WOTUS effectively granted to the federal government jurisdiction over every puddle and tiny body of water on private land.

"EPA is restoring states' important role in the regulation of water," Pruitt stated when announcing the end of the rule.

EPA is also establishing Compliance Assistance Centers to "help businesses, colleges and universities, local governments, tribes and federal facilities understand and comply with environmental requirements and save money," and it's introducing Next Generation Compliance standards to "reduce costs and saves time and resources, while improving compliance."

Under Pruitt, the EPA is no longer imposing onerous rules that stifle economic growth and bankrupt the country. Instead, Pruitt is enacting levelheaded regulations that strike a proper balance between protecting the environment and maintaining consumer freedom.

After little more than a year on the job, Pruitt has transformed EPA's culture and restored its mission. The EPA Swamp has been substantially drained, a huge setback for power-grabbing leftists. And it's primarily for that reason the left and mainstream media have succumbed to attacking Pruitt's character. Just imagine how apoplectic they will get if Pruitt is allowed to continue his record of success in the years ahead!

Gulf Live

AMERICAN OVERSIGHT

EPA Administrator Signs $107.6 Million Memorandum to Clean Mississippi Phosphates Site

By: Tyler Carter, 4/19/18

The Environmental Protection Agency administrator Scott Pruitt signed an Action Memorandum for $107.6 million on Wednesday, accelerating the cleanup of the former Mississippi Phosphates Corporation (MPC) Site in Pascagoula.

In January, Pruitt and his team added MPC to its Superfund Priorities List after the agency announced in August 2017 their intentions to recommend the site for the list because of the environmental hazard it posed to marine and human life in the City of Pascagoula.

The Action Memorandum signed Wednesday selects a $71.6 million cleanup that will take place from 2018 through 2020, plus $36 million for ongoing wastewater treatment during the three-year cleanup period.

"In just over a year, EPA has taken multiple important actions to accelerate the remediation of the Mississippi Phosphates Superfund Site," Pruitt said. "This memo reflects my commitment to addressing Superfund sites as quickly and safely as possible to ensure human health and economic activity in the surrounding areas are fully protected."

The cleanup plan identified in the Action Memorandum focuses on the closure of the East Gypsum Stack and the North Ponds at the West Gypsum Stack. The cleanup will eliminate storage of more than 500 million gallons of contaminated water on site and reduce the volume of water requiring treatment by an estimated 98 percent.

Design of the closure system is underway. EPA is evaluating the possible use of local dredge spoil to cap and close the East Gypsum Stack.

AMERICAN OVERSIGHT

In response to comments received during the public comment period, EPA is also evaluating the use of engineered geosynthetic turf products as an alternative cap/cover system in its design.

The MPC Site is a former diammonium phosphate fertilizer plant that began operation in the 1950s. The facility ceased operations in December 2014 under Chapter 11 bankruptcy protection, leaving more than 700,000,000 gallons of acidic, nutrient-rich wastewater stored at the facility.

The wastewater--if improperly discharged--may be toxic to fish and other forms of marine life and can also cause algal blooms. Previous releases of untreated wastewater from the site (before EPA took over wastewater treatment operations) resulted in fish kills.

EPA currently oversees wastewater treatment at a rate of approximately 2-4 million gallons per day--at a cost of over $1 million per month--due to the high volume of wastewater requiring treatment. EPA has expended approximately $17 million to treat wastewater at the site.

EPA assumed control of wastewater treatment operations at the former MPC fertilizer facility once the MPC Environmental Trust, which owns the property, ran out of funds in February 2017.

"Pascagoula has lived with this catastrophic issue for years with no response," Mayor Dane Maxwell said. "Since President Trump took office and under Administrator Pruitt not only have we had a response, but it has been from the highest levels. Making Mississippi

AMERICAN OVERSIGHT

Phosphates cleanup a priority is very important for the entire Gulf Coast."

Daily Caller

http://dailycaller.com/2018/04/19/associated-press-scott-pruitt-travel/

Associated Press Publishes Misleading Headline on Scott Pruitt's Travel Arrangements

By: Jason Hopkins, 4/19/18

The Environmental Protection Agency is pushing back against The Associated Press' reporting on Administrator Scott Pruitt's private travel.

The AP released a report on Wednesday titled: "EPA chief sat in coach when not flying on taxpayer's dime." The headline — and the opening lede — suggested that the leader of the EPA makes more economical decisions when taking personal flights, as opposed to his travel when conducting official business.

Pruitt has received criticism for flying first class on the taxpayers' dime, an arrangement he says is made for security reasons. The AP story centered on how Pruitt flew coach on Southwest Airlines when he made personal trips to Oklahoma in August and September.

However, there is one major detail included about Southwest Airlines: They do not offer first-class travel. This detail was included in the body of the AP article, but the headline and angle of the report framed Pruitt as a hypocrite when it comes to personal travel.

"Despite their misleading headline, the Associated Press knowingly reported that that there are no premium-class seats on Southwest Airlines," read a Wednesday statement from the EPA. "The fact is: Administrator Pruitt consistently follows the same security measures, which is not about sitting in first class but sitting near the front of the plane. It's impossible to fly first-class on Southwest Airlines, however Administrator Pruitt always sat in the first

AMERICAN OVERSIGHT

few rows of the aircraft."

This was not the only detail the EPA took issue with. The AP claimed on Twitter that it confirmed their story with the agency.

However, EPA spokesperson Jahan Wilcox said this tweet is false and that the agency never confirmed their report. "The same security procedures are followed whether Administrator Pruitt is on official or personal travel," the official statement provided to the AP read. The statement neither confirmed nor denied the story.

Pruitt, who has racked up thousands of dollars in travel expenses since taking the helm of the EPA, has received immense criticism for taking first-class flights on taxpayer dollars. Democrats and other Pruitt opponents have used news of his expensive flights to push for his ouster. The EPA, however, maintains more expensive flights are necessary for his safety.

Pruitt has been the target of aggression and profane language at airports since leading the agency.

"He was approached in the airport numerous times, to the point of profanities being yelled at him and so forth," Henry Barnet, director of the EPA's Office of Criminal Enforcement, told Politico in a Feb. 15 report. "We felt that based on the recommendation from the team leader, the special agent in charge, that it would be better suited to have him in business or first class, away from close proximity from those individuals who were approaching him and being extremely rude, using profanities and potential for altercations and so forth."

Tulsa World

http://www.tulsaworld.com/news/usworld/scott-pruitt-showed-penchant-for-travel-drivers-even-before-being/article_4aa07e53-b8ff-5241-a223-58d1829655d2.html

Scott Pruitt Showed Penchant for Travel, Drivers Even Before Being Names EPA Head

AMERICAN OVERSIGHT

By: Ellen Knickmeyer and Sean Murphy, 4/20/18

Scott Pruitt's penchant for travel and concerns about security were notable even before he became head of the Environmental Protection Agency, according to newly obtained records that show that as Oklahoma's attorney general he frequently traveled out-of-state for appearances before conservative groups and used an office investigator as a driver.

As Oklahoma's top prosecutor from 2011 to 2016, Pruitt was raising his profile nationally as a conservative in favor of rolling back regulation and federal authority.

Records obtained by The Associated Press show Pruitt traveled extensively as Oklahoma's attorney general, taking 18 out-of-state trips in 2015 and 2016, for example, including 11 to Washington, D.C. Although some travel expenses were reimbursed by conservative think tanks where Pruitt spoke, records show no sign of reimbursement for several trips involving appearances before them.

Immediately after taking office as attorney general, Pruitt started using a full-time driver who chauffeured him in a large black SUV from his home in Tulsa to the office in Oklahoma City, about 90 miles away.

Pruitt's daily calendars show the driver — variously shown on the records as "driver" or "agent" — was often an office investigator, a licensed law enforcement officer who typically investigates crimes for the agency.

"It appears he created his own security detail," said Gary Jones, Oklahoma's state auditor and a fellow Republican.

As EPA administrator, Pruitt has been under intense scrutiny since it was first revealed last month that he had stayed last year in a bargain-priced Capitol Hill condo tied to a fossil-fuels lobbyist. Multiple investigations have been launched by government watchdogs and congressional committees looking into luxury travel expenses, outsized security spending and massive raises awarded to political appointees.

AMERICAN OVERSIGHT

Lincoln Ferguson, a former spokesman for the attorney general who now serves as a senior adviser to him at the EPA, said if Pruitt's out-of-state travel was strictly for political purposes, it would have been paid for by campaign funds. But travel records show the trips were arranged through a state-contracted travel agency, and few show any reimbursement was made.

In Oklahoma, Pruitt routinely made the three-hour commute from his home in Tulsa to the state Capitol in Oklahoma City during the working day, according to the calendars.

The entry for Dec. 7, 2015, for example, shows the entry: "8:15 to 9:45, depart Tulsa for OKC" and "3:30-5, depart OKC for Tulsa."

That was despite Pruitt expanding his office's Tulsa branch during his time. The AP reported in December 2016 that the move to bigger, pricier offices in Tulsa were part of a 40 percent increase in his office's expenses as attorney general. Pruitt also added nearly 60 employees to the attorney general's office.

By contrast, Pruitt's predecessor, Democrat Drew Edmondson, who held the attorney general post for 16 years, said he typically used a four-door sedan and drove himself to events.

Ferguson, the senior adviser to Pruitt, said "there was no wasted time" on Pruitt's commutes between Tulsa and Oklahoma City.

"He was working, reviewing documents, on the phone," Ferguson said.

Overall spending on travel by Pruitt's office averaged about $270,000 a year in his last four years as Oklahoma's attorney general, up 26 percent from his predecessor's final year in office. The figures do not include a total for Pruitt's trips alone. The attorney general's office

AMERICAN OVERSIGHT

spent $201,000 on travel during his predecessor's last year in the office.

The calendars are heavily redacted and entire days are blacked out.

But the records do show Pruitt frequently traveled to Washington to speak to groups including the Federalist Society; the Club for Growth, a free-enterprise advocacy group; and an anti-abortion rally. He also made similar appearances elsewhere, such as one before the small-government FreedomWorks group in Cleveland on "Battling the Regulatory State."

"If it's not state-related, then the state should not be responsible for" the cost, said Jones, the state auditor. "You can't use any public assets for personal or political reasons."

Records show many of the trips occurred during the workweek, when Pruitt was drawing a state salary of $132,000. Oklahoma broadly bans first-class tickets for state employees. The travel records show only one first-class flight for Pruitt, with a scrawled note on it showing Pruitt's campaign paid for it.

Edmondson, who is now running for governor, said his travel expenses as attorney general typically covered national and regional conventions of attorneys general.

"I think you'll find that his out-of-state travel would far exceed any other attorney general" in Oklahoma, said former Gov. David Walters, a Democrat, who recalled Pruitt speaking before local clubs on topics such as the Obama administration, rather than crime or consumer fraud in Oklahoma.

Conservative groups hosting Pruitt appeared to reimburse most of Pruitt's flights and some other direct state travel expenses after 2015, and some beforehand.

But on one trip in January 2016, Pruitt billed taxpayers more than $1,000 for a trip to

AMERICAN OVERSIGHT

Washington in which he held separate meetings with executives of three conservative think tanks: the APP Foundation, The Federalist Society and Club for Growth. There was no record of reimbursement for that trip. Three weeks later, Pruitt spent the weekend in California for a dinner and a speech to The Federalist Society, which reimbursed the state for his travel.

https://apnews.com/e29d5563fc0c45caa4faa6b3749405a6/Comey-memo:-Trump-complained-about-Flynn's-'judgment-issues

In Comey memos, Trump fixates on 'hookers,' frets over Flynn

By: Mary Clare Jalonick, Eric Tucker, and Chad Day, 4/20/18

In a series of startlingly candid conversations, President Donald Trump told former FBI Director James Comey that he had serious concerns about the judgment of a top adviser, asked about the possibility of jailing journalists and described a boast from Vladimir Putin about Russian prostitutes, according to Comey's notes of the talks obtained by The Associated Press on Thursday night.

The 15 pages of documents contain new details about a series of interactions with Trump that Comey found so unnerving that he chose to document them in writing. Those seven encounters in the weeks and months before Comey's May 2017 firing include a Trump Tower discussion about allegations involving Trump and prostitutes in Moscow; a White House dinner at which Comey says Trump asked him for his loyalty; and a private Oval Office discussion where the ex-FBI head says the president asked him to end an investigation into Michael Flynn, the former White House national security adviser.

The documents had been eagerly anticipated since their existence was first revealed last year, especially since Comey's interactions with Trump are a critical part of special counsel Robert Mueller's investigation into whether the president sought to obstruct justice. Late Thursday night, Trump tweeted that the memos "show clearly that there was NO COLLUSION and NO OBSTRUCTION."

AMERICAN OVERSIGHT

The president also accused Comey of leaking classified information. The memos obtained by the AP were unclassified, though some portions were blacked out as classified. Details from Comey's memos reported in news stories last year appear to come from the unclassified portions.

In explaining the purpose of creating the memos, which have been provided to Mueller, Comey has said he "knew there might come a day when I would need a record of what had happened" to defend not only himself but the FBI as well.

The memos cover the first three months of the Trump administration, a period of upheaval marked by staff turnover, a cascade of damaging headlines and revelations of an FBI investigation into potential ties between the Trump campaign and Russia. The documents reflect Trump's uneasiness about that investigation, though not always in ways that Comey seemed to anticipate.

In a February 2017 conversation, for instance, Trump told Comey how Putin told him, "we have some of the most beautiful hookers in the world" even as the president adamantly, and repeatedly, distanced himself from a salacious allegation concerning him and prostitutes in Moscow, according to one memo.

In another memo, Comey recounts how Trump at a private White House dinner pointed his fingers at his head and complained that Flynn, his embattled national security adviser, "has serious judgment issues." The president blamed Flynn for failing to alert him promptly to a congratulatory call from a world leader, causing a delay for Trump in returning a message to an official whose name is redacted in the documents.

"I did not comment at any point during this topic and there was no mention or acknowledgment of any FBI interest in or contact with General Flynn," Comey wrote.

By that point, the FBI had already interviewed Flynn about his contacts with the Russian ambassador, Sergey Kislyak, and the Justice Department had already warned White House officials that they were concerned Flynn was vulnerable to blackmail.

AMERICAN OVERSIGHT

Flynn was fired Feb. 13, 2017, after White House officials said he had misled them about his Russian contacts during the transition period by saying that he had not discussed sanctions. The following day, according to a separate memo, Comey says Trump cleared the Oval Office of other officials, encouraged him to let go of the investigation into Flynn and called him a good guy. Flynn pleaded guilty to lying to the FBI and is now cooperating with Mueller's investigation.

The memos reveal that days before Flynn's firing, then-White House chief of staff Reince Priebus asked Comey if Flynn's communications were being monitored under a secret surveillance warrant.

"Do you have a FISA order on Mike Flynn?" Priebus asked Comey, according to the memos, referring to an order under the Foreign Intelligence Surveillance Act.

Comey said he "paused for a few seconds and then said that I would answer here, but that this illustrated the kind of question that had to be asked and answered through established channels."

Comey's response is redacted on the unclassified memos.

The memos also show Trump's continued distress at a dossier of allegations — compiled by an ex-British spy whose work was funded by the Democratic National Committee and the Clinton campaign — examining potential ties between him and his aides and the Kremlin. Comey writes how Trump repeatedly denied to him having been involved in an encounter with Russian prostitutes in a Moscow hotel.

"The President said 'the hookers thing' is nonsense," Comey writes, noting that Trump then related the conversation with Putin about the "most beautiful hookers." Comey says Trump did not say when Putin had made the comment.

AMERICAN OVERSIGHT

The documents also include the president's musings about pursuing leakers and imprisoning journalists. They also provide insight into Comey's personal and professional opinions. He judges the administration's travel ban to be legally valid, and he takes a swipe at former Attorney General Loretta Lynch, calling her predecessor, Eric Holder, "smarter and more sophisticated and smoother."

The memos were provided to Congress earlier Thursday as House Republicans escalated criticism of the Justice Department, threatening to subpoena the documents and questioning officials.

In a letter sent to three Republican House committee chairmen Thursday evening, Assistant Attorney General Stephen Boyd wrote that the department was sending a classified version of the memos and an unclassified version. The department released Boyd's letter publicly but did not release the memos. The chairmen issued a statement late Thursday saying the memos show that Comey clearly never felt threatened, and Trump didn't obstruct justice.

Justice officials had allowed some lawmakers to view the memos but had never provided copies to Congress. Boyd wrote that the department had also provided the memos to several Senate committees.

Boyd wrote in the letter that the department "consulted the relevant parties" and concluded that releasing the memos would not adversely affect any ongoing investigations. Mueller is investigating potential ties between Russia and Trump's 2016 campaign as well as possible obstruction of justice by the president.

Comey is on a publicity tour to promote his new book, "A Higher Loyalty." He revealed last year that he had written the memos after conversations with Trump.

He said in an interview Thursday with CNN that he's "fine" with the Justice Department turning his memos over to Congress.

"I think what folks will see if they get to see the memos is I've been consistent since the

AMERICAN OVERSIGHT

very beginning, right after my encounters with President Trump, and I'm consistent in the book and tried to be transparent in the book as well," he said.

Trump hires Giuliana, Two Other Attorneys Amid Mounting Legal Turmoil Over Russia

By: Robert Costa, Josh Dawsey and Rosalind Helderman, 4/19/18

Former New York mayor Rudolph W. Giuliani and two other former federal prosecutors joined President Trump's legal team Thursday following weeks of turbulence and struggles to find attorneys who would agree to represent the president in the ongoing federal probe into Russian election interference.

The reshuffling comes at a particularly tense juncture for Trump, who aides said is increasingly frustrated by special counsel Robert S. Mueller III's investigation and with the senior officials at the Justice Department.

The entry of Giuliani, an experienced attorney with a combative reputation, immediately raises questions about how Trump will engage with Mueller and the leadership at Justice. Some Trump advisers are concerned that the president could use his -executive authority to close or diminish the special counsel probe, which has spawned a parallel investigation in New York targeting his personal attorney.

"I'm doing it because I hope we can negotiate an end to this for the good of the country and because I have high regard for the president and for Bob Mueller," Giuliani said in an interview Thursday.

AMERICAN OVERSIGHT

Trump said in a statement that Giuliani "wants to get this matter quickly resolved."

In recent days, the president has been regularly venting and speculating to aides about his legal status and the expected timeline for the Russia investigation to end, according to associates briefed on the discussions.

Rudolph W. Giuliani was an ardent supporter of President Trump during the 2016 campaign, and the former New York mayor was considered for the post of attorney general. (Mike Segar/Reuters)

Trump also loudly and repeatedly complained to several advisers earlier this week that former FBI director James B. Comey, former deputy FBI director Andrew McCabe and former Democratic presidential nominee Hillary Clinton, among others, should be charged with crimes for misdeeds alleged by Republicans, the associates said.

Although White House officials said Thursday that Trump has not called Justice Department officials or taken any formal action, the persistent grousing has made some advisers anxious, according to two people close to the president. A publicity tour by Comey to promote his book critical of Trump, "A Higher Loyalty," has attracted particular attention from the president, who has disparaged Comey publicly and privately.

Trump also complained this week about Supreme Court Justice Neil M. Gorsuch, saying the judge had proved too liberal in recent cases, according to administration officials who heard about the complaints. Associates said he was incensed that Gorsuch had voted against the administration on an immigration case and said it renewed his doubts that Gorsuch would be a reliable conservative. One top Trump adviser played down the comments as unhappiness with Gorsuch's decision rather than with Gorsuch broadly.

Giuliani, 73, brings a familiarity with several of the legal fronts that Trump is navigating. He is a former associate attorney general and a former U.S. attorney for the Southern District of New York, which is the office overseeing an investigation of Trump's personal attorney, Michael Cohen.

AMERICAN OVERSIGHT

Trump counsel Jay Sekulow said Thursday that former federal prosecutors Jane Serene Raskin and Marty Raskin, a couple who manage a Florida-based law firm, have also agreed to join the legal team.

Giuliani is certain to come under intense scrutiny for his role. His own pre-election activities two years ago have been the subject of criticism from Democrats, especially television interviews in which he suggested he had sources providing him inside information about the FBI's investigation of Clinton's private email server when she was secretary of state.

A Justice Department Inspector General report on the department's handling of the Clinton investigations is expected to be released in coming weeks and will probably include results of leak investigations regarding the Clinton probe.

Numerous other challenges face the attorneys who will work alongside Sekulow and counsel Ty Cobb — who have functioned as Trump's legal nucleus for weeks following the resignation of John Dowd, a legal veteran and the team's former leader. Dowd stepped down in March amid clashes over strategy and whether Trump should sit for a voluntary interview with Mueller. The legal team has often been beset by infighting.

"The big question is, how's he going to play with everybody else?" said a lawyer involved with the investigation who was not authorized to speak publicly. "Will he be combative Rudy, or will he play well with Mueller's team? Will he try to walk . . . back from the brink and answer the big question, which is whether the president will sit for an interview? And will Trump listen to him?"

Giuliani declined to say whether Trump has made a final decision on whether to sit for an interview with federal investigators. Trump has been mulling it for weeks, moving away from the idea after the home, offices and hotel room of Cohen were raided this month. Trump reacted angrily, calling it "disgraceful."

"It's too early for me to say that," Giuliani replied, when asked whether a Trump interview is unlikely to happen.

AMERICAN OVERSIGHT

Giuliani also declined to discuss whether Deputy Attorney General Rod J. Rosenstein, who has been under fire from conservatives and oversees the Russia probe, could be fired by the president in the coming weeks.

"I'm not involved in anything about those issues. My advice on Mueller has been this: He should be allowed to do his job. He's entitled to do his job."

Giuliani said he formalized his decision in recent days, including over dinner last week at Trump's Mar-a-Lago resort in Florida. Giuliani and Trump spoke Thursday about the legal plan moving forward, along with Sekulow, whom he has known for years and called a friend. He added that he and Cobb also spoke, on Wednesday.

Giuliani — who will take a leave from his law firm, Greenberg Traurig, and is in the midst of a divorce from his third wife — said he would spend a "great deal of time" in Washington working with Trump but would continue to live in New York. He has been frequently been seen holding court at the Trump International Hotel in Washington, dining and drinking with friends and browsing for gourmet cigars.

Trump had considered Giuliani for attorney general and has said in recent weeks he needs a New York-based attorney. Many leading white-collar lawyers, such as former solicitor general Theodore Olson, have declined Trump's entreaties, often citing conflicts or expressing unease about the high-profile case.

Trump is also known to be a difficult client who does not always listen to his attorneys' advice, according to lawyers who know him. And Giuliani, once a top adviser, grew frustrated with his treatment during the transition and had receded from the inner circle.

As he has closely monitored cable-news programs chronicling his presidency and the Mueller probe, Trump has swatted away the notion that he cannot attract prominent attorneys. He has also spoken about his desire for a bolstered team and wondered aloud about the damage that Cohen's legal proceedings could bring, according to the associates briefed on the discussions, who requested anonymity to talk about them.

AMERICAN OVERSIGHT

Giuliani's arrival is part of a broader shift in Trump's inner circle toward the core allies and brusque and brutal style that defined his outsider presidential campaign and his business career. Beyond Mueller, aides said everyone and everything around Trump feels liable to become a target for his wrath as he grapples with difficult issues at home and abroad, in Syria and North Korea.

"What we've been seeing with the president is that he is picking A-level people that he knows are experienced but also know him well," said Trump ally Christopher Ruddy, the president and CEO of Newsmax Media, a conservative outlet. "One of the problems in the first year was that people didn't work out because they didn't know him and they didn't have experience for the position."

AMERICAN OVERSIGHT

BNA: Indian to Get EPA Money for Lead Cleanup, Water Upgrades.

The EPA is giving the Hoosier State a loan of nearly half a billion dollars to upgrade its water systems, with plans to spend additional money to clean up a lead-contaminated site in the northwestern part of the state. EPA Administrator Scott Pruitt on April 19 visited Whiting, Ind., home of a former Federated Metals plant that is now a Superfund site. Pruitt said his agency would spend $1.7 million to address lead contamination at the former copper, lead, and zinc smelter.

Brietbart: Exclusive—Talgo: EPA Administrator Scott Pruitt Should Be Applauded, Not Attacked

Environmental Protection Agency (EPA) Administrator Scott Pruitt has unquestionably been the most effective official in President Donald Trump's administration. He has laid waste to Barack Obama's radical environmental legacy, which is why Democrats, the mainstream media, academia, environmentalists, and left-wing advocacy groups are in full-panic mode. Out of desperation, these zealots (aided by the media) are resorting to unwarranted character assaults to challenge Pruitt's integrity and diminish his authority.

Gulf Live: EPA Administrator Signs $107.6 Million Memorandum to Clean Mississippi Phosphates Site

The Environmental Protection Agency administrator Scott Pruitt signed an Action Memorandum for $107.6 million on Wednesday, accelerating the cleanup of the former Mississippi Phosphates Corporation (MPC) Site in Pascagoula. In January, Pruitt and his team added MPC to its Superfund Priorities List after the agency announced in August 2017 their intentions to recommend the site for the list because of the environmental hazard it posed to marine and human life in the City of Pascagoula. The Action Memorandum signed Wednesday selects a $71.6 million cleanup that will take place from 2018 through 2020, plus $36 million for ongoing wastewater treatment during the three-year cleanup period.

Daily Caller: Associated Press Publishes Misleading Headline on Scott Pruitt's Travel Arrangements

The Environmental Protection Agency is pushing back against The Associated Press' reporting on Administrator Scott Pruitt's private travel. The AP released a report on Wednesday titled: "EPA chief sat in coach when not flying on taxpayer's dime." The headline — and the opening lede — suggested that the leader of the EPA makes more

AMERICAN OVERSIGHT

economical decisions when taking personal flights, as opposed to his travel when conducting official business. Pruitt has received criticism for flying first class on the taxpayers' dime, an arrangement he says is made for security reasons. The AP story centered on how Pruitt flew coach on Southwest Airlines when he made personal trips to Oklahoma in August and September.

Tulsa World: Scott Pruitt Showed Penchant for Travel, Drivers Even Before Being Named EPA Head

Scott Pruitt's penchant for travel and concerns about security were notable even before he became head of the Environmental Protection Agency, according to newly obtained records that show that as Oklahoma's attorney general he frequently traveled out-of-state for appearances before conservative groups and used an office investigator as a driver. As Oklahoma's top prosecutor from 2011 to 2016, Pruitt was raising his profile nationally as a conservative in favor of rolling back regulation and federal authority.

Indiana to Get EPA Money for Lead Cleanup, Water Upgrades

By: David Schultz, 4/19/18

The EPA is giving the Hoosier State a loan of nearly half a billion dollars to upgrade its water systems, with plans to spend additional money to clean up a lead-contaminated site in the northwestern part of the state.

EPA Administrator Scott Pruitt on April 19 visited Whiting, Ind., home of a former Federated Metals plant that is now a Superfund site. Pruitt said his agency would spend $1.7 million to address lead contamination at the former copper, lead, and zinc smelter.

Pruitt also highlighted a $436 million loan from the Environmental Protection Agency to Indiana through the agency's Water Infrastructure Finance and Innovation Act program, which provides low-cost financing for drinking water and wastewater infrastructure upgrades. The agency first announced last summer it had accepted Indiana's application for this loan as part of its first-ever round of financing under the program established in 2014.

The EPA said in an April 19 statement that the money would flow through to the state "once all needed processes are complete." The loan cleared a preliminary EPA environmental review earlier this year. This loan is one of 12 that the EPA granted through its first $2.3 billion round of financing through this program.

The agency's press office did not immediately respond to Bloomberg Environment's

AMERICAN OVERSIGHT

request for comment on what specific actions the EPA took on April 19 on the Indiana loan or about whether the loan has been finalized.

Pruitt Talks to Residents

The announcement came after Pruitt personally visited Whiting, which is on Lake Michigan, and spoke with people living near the contaminated Federated Minerals site.

"There was a woman who was a property owner waiting for them," Thomas Frank, an activist with the East Chicago, Ind.-based Community Strategy Group, an environmental justice advocacy coalition, told Bloomberg Environment. "Apparently her property tested high in lead and she was showing them where the tests had occurred,"

Pruitt was at the Indiana site about 10 or 15 minutes, Frank said.

Pruitt also made a stop lasting less than 20 minutes at the EPA's Region 5 headquarters in Chicago, Mike Mikulka, president of American Federation of Government Employees Local 704 union, told Bloomberg Environment.

Exclusive—Talgo: EPA Administrator Scott Pruitt Should Be Applauded, Not Attacked

By: Chris Talgo, 4/19/18

Environmental Protection Agency (EPA) Administrator Scott Pruitt has unquestionably been the most effective official in President Donald Trump's administration.

AMERICAN OVERSIGHT

He has laid waste to Barack Obama's radical environmental legacy, which is why Democrats, the mainstream media, academia, environmentalists, and left-wing advocacy groups are in full-panic mode. Out of desperation, these zealots (aided by the media) are resorting to unwarranted character assaults to challenge Pruitt's integrity and diminish his authority.

The disingenuousness of these attacks is made evident by the silence of these same groups when several Obama-era federal agencies engaged in illegal and/or unethical activities. The fact very few Americans know the name "Richard Windsor" is proof of selective outrage by "good government" groups and the media. (Windsor is the name of a fake EPA employee created by former EPA head Lisa Jackson to skirt public-records laws.)

Thankfully, Pruitt is not letting ad hominem attacks distract him from his mission of implementing a "back to basics" agenda for EPA. Unlike most of his predecessors at EPA and his opponents on the left, Pruitt believes, "We can and we will achieve clean air and clean water and we will also have strong economic growth and job creation at the same time."

To accomplish these long-overdue reforms, Pruitt has focused on and been incredibly successful at implementing a "three E's" strategy: concentrating on the environment, economy, and engagement with state and local governments.

1. **Protecting the Environment**
2.

Under Obama, the EPA became a highly politicized agency, one that had been captured by radical environmental groups. When Pruitt took office, he vowed to refocus the agency on its core mission: protecting the environment and staying out of politics.

In May 2017, Pruitt created the Super Fund Task Force "to provide recommendations for improving and expediting site cleanups and promoting redevelopment." As of this writing, EPA has already completed seven Super Fund site clean-ups.

Additionally, EPA is prioritizing drinking water problems, including the egregious lead problem that arose during the Obama era in Flint, Michigan.

AMERICAN OVERSIGHT

2. **Sensible regulations that encourage economic growth**

Obama's two EPA administrators, Jackson and Gina McCarthy, instituted an unprecedented era of unnecessary, costly, burdensome rulemaking, undermining personal property rights and economic growth.

Fortunately, Pruitt has put an end to this. His highlights, which are many, include announcing that the United States will pull out of the Paris climate accord.

In 2016, Obama pushed the United States into the Paris climate agreement, which analysts found would reduce U.S. gross domestic product by more than $2.5 trillion and result in an average annual job loss of nearly 400,000 by 2035 compared to jobs projections without the accord.

Pruitt has been a staunch advocate of withdrawing from this fake "treaty," and his support for the idea surely contributed to Trump's decision to pull back from the Paris accords.

In October 2017, Pruitt proposed repealing Obama's Clean Power Plan, a set of regulations that economists estimated would cost U.S. taxpayers $40 billion per year and produce no effect on global carbon dioxide levels.

Also in October, Pruitt issued a directive to end EPA's "sue and settle" practices, a scheme in which radical environmental groups sue EPA to impose their agenda and EPA chooses not to fight the lawsuit in order to satisfy radical environmentalists' demands.

Putting the interests of ordinary Americans ahead of special-interest groups, Pruitt declared in October 2017 "the days of regulation through litigation are over."

In another measure designed to protect consumers, Pruitt announced in March 2018 the EPA will no longer use "secret science" in crafting regulations. Going forward, EPA rulemaking will be transparent and based on good data—not ideology.

AMERICAN OVERSIGHT

Most recently, Pruitt suspended for review the onerous Corporate Annual Fuel Economy (CAFE) standards Obama's regime rushed through near the end of his final term. These burdensome regulations mandated unachievable fuel economy standards and would have forced carmakers to produce vehicles Americans don't want—and for an extra $3,800 per vehicle and negligible environmental benefits.

3. **Engaging with state and local partners**

For decades, EPA has usurped power from state and local governments. Pruitt is reversing this disturbing trend by instituting "cooperative federalism." Under this program, EPA will coordinate with state and local governments, rather than dictating edicts. His track record so far includes his revision of the definition and implementation of Obama's 2015 Waters of the United States rule (WOTUS), which was overly broad and abusive. WOTUS effectively granted to the federal government jurisdiction over every puddle and tiny body of water on private land.

"EPA is restoring states' important role in the regulation of water," Pruitt stated when announcing the end of the rule.

EPA is also establishing Compliance Assistance Centers to "help businesses, colleges and universities, local governments, tribes and federal facilities understand and comply with environmental requirements and save money," and it's introducing Next Generation Compliance standards to "reduce costs and saves time and resources, while improving compliance."

Under Pruitt, the EPA is no longer imposing onerous rules that stifle economic growth and bankrupt the country. Instead, Pruitt is enacting levelheaded regulations that strike a proper balance between protecting the environment and maintaining consumer freedom.

After little more than a year on the job, Pruitt has transformed EPA's culture and restored its mission. The EPA Swamp has been substantially drained, a huge setback for power-grabbing leftists. And it's primarily for that reason the left and mainstream media have succumbed to attacking Pruitt's character. Just imagine how apoplectic they will get if Pruitt is allowed to continue his record of success in the years ahead!

EPA Administrator Signs $107.6 Million Memorandum to Clean Mississippi Phosphates Site

By: Tyler Carter, 4/19/18

The Environmental Protection Agency administrator Scott Pruitt signed an Action Memorandum for $107.6 million on Wednesday, accelerating the cleanup of the former Mississippi Phosphates Corporation (MPC) Site in Pascagoula.

In January, Pruitt and his team added MPC to its Superfund Priorities List after the agency announced in August 2017 their intentions to recommend the site for the list because of the environmental hazard it posed to marine and human life in the City of Pascagoula.

The Action Memorandum signed Wednesday selects a $71.6 million cleanup that will take place from 2018 through 2020, plus $36 million for ongoing wastewater treatment during the three-year cleanup period.

"In just over a year, EPA has taken multiple important actions to accelerate the remediation of the Mississippi Phosphates Superfund Site," Pruitt said. "This memo reflects my commitment to addressing Superfund sites as quickly and safely as possible to ensure human health and economic activity in the surrounding areas are fully protected."

The cleanup plan identified in the Action Memorandum focuses on the closure of the East Gypsum Stack and the North Ponds at the West Gypsum Stack. The cleanup will eliminate storage of more than 500 million gallons of contaminated water on site and reduce the volume of water requiring treatment by an estimated 98 percent.

AMERICAN OVERSIGHT

Design of the closure system is underway. EPA is evaluating the possible use of local dredge spoil to cap and close the East Gypsum Stack.

In response to comments received during the public comment period, EPA is also evaluating the use of engineered geosynthetic turf products as an alternative cap/cover system in its design.

The MPC Site is a former diammonium phosphate fertilizer plant that began operation in the 1950s. The facility ceased operations in December 2014 under Chapter 11 bankruptcy protection, leaving more than 700,000,000 gallons of acidic, nutrient-rich wastewater stored at the facility.

The wastewater--if improperly discharged--may be toxic to fish and other forms of marine life and can also cause algal blooms. Previous releases of untreated wastewater from the site (before EPA took over wastewater treatment operations) resulted in fish kills.

EPA currently oversees wastewater treatment at a rate of approximately 2-4 million gallons per day--at a cost of over $1 million per month--due to the high volume of wastewater requiring treatment. EPA has expended approximately $17 million to treat wastewater at the site.

EPA assumed control of wastewater treatment operations at the former MPC fertilizer facility once the MPC Environmental Trust, which owns the property, ran out of funds in February 2017.

AMERICAN OVERSIGHT

"Pascagoula has lived with this catastrophic issue for years with no response," Mayor Dane Maxwell said. "Since President Trump took office and under Administrator Pruitt not only have we had a response, but it has been from the highest levels. Making Mississippi Phosphates cleanup a priority is very important for the entire Gulf Coast."

Associated Press Publishes Misleading Headline on Scott Pruitt's Travel Arrangements

By: Jason Hopkins, 4/19/18

The Environmental Protection Agency is pushing back against The Associated Press' reporting on Administrator Scott Pruitt's private travel.

The AP released a report on Wednesday titled: "EPA chief sat in coach when not flying on taxpayer's dime." The headline — and the opening lede — suggested that the leader of the EPA makes more economical decisions when taking personal flights, as opposed to his travel when conducting official business.

Pruitt has received criticism for flying first class on the taxpayers' dime, an arrangement he says is made for security reasons. The AP story centered on how Pruitt flew coach on Southwest Airlines when he made personal trips to Oklahoma in August and September.

However, there is one major detail included about Southwest Airlines: They do not offer first-class travel. This detail was included in the body of the AP article, but the headline and angle of the report framed Pruitt as a hypocrite when it comes to personal travel.

AMERICAN OVERSIGHT

"Despite their misleading headline, the Associated Press knowingly reported that that there are no premium-class seats on Southwest Airlines," read a Wednesday statement from the EPA. "The fact is: Administrator Pruitt consistently follows the same security measures, which is not about sitting in first class but sitting near the front of the plane. It's impossible to fly first-class on Southwest Airlines, however Administrator Pruitt always sat in the first few rows of the aircraft."

This was not the only detail the EPA took issue with. The AP claimed on Twitter that it confirmed their story with the agency.

However, EPA spokesperson Jahan Wilcox said this tweet is false and that the agency never confirmed their report. "The same security procedures are followed whether Administrator Pruitt is on official or personal travel," the official statement provided to the AP read. The statement neither confirmed nor denied the story.

Pruitt, who has racked up thousands of dollars in travel expenses since taking the helm of the EPA, has received immense criticism for taking first-class flights on taxpayer dollars. Democrats and other Pruitt opponents have used news of his expensive flights to push for his ouster. The EPA, however, maintains more expensive flights are necessary for his safety.

Pruitt has been the target of aggression and profane language at airports since leading the agency.

"He was approached in the airport numerous times, to the point of profanities being yelled at him and so forth," Henry Barnet, director of the EPA's Office of Criminal Enforcement, told Politico in a Feb. 15 report. "We felt that based on the recommendation from the team leader, the special agent in charge, that it would be better suited to have him in business or first class, away from close proximity from those individuals who were approaching him and being extremely rude, using profanities and potential for altercations and so forth."

Scott Pruitt Showed Penchant for Travel, Drivers Even Before Being Names EPA Head

By: Ellen Knickmeyer and Sean Murphy, 4/20/18

Scott Pruitt's penchant for travel and concerns about security were notable even before he became head of the Environmental Protection Agency, according to newly obtained records that show that as Oklahoma's attorney general he frequently traveled out-of-state for appearances before conservative groups and used an office investigator as a driver.

As Oklahoma's top prosecutor from 2011 to 2016, Pruitt was raising his profile nationally as a conservative in favor of rolling back regulation and federal authority.

Records obtained by The Associated Press show Pruitt traveled extensively as Oklahoma's attorney general, taking 18 out-of-state trips in 2015 and 2016, for example, including 11 to Washington, D.C. Although some travel expenses were reimbursed by conservative think tanks where Pruitt spoke, records show no sign of reimbursement for several trips involving appearances before them.

Immediately after taking office as attorney general, Pruitt started using a full-time driver who chauffeured him in a large black SUV from his home in Tulsa to the office in Oklahoma City, about 90 miles away.

Pruitt's daily calendars show the driver — variously shown on the records as "driver" or "agent" — was often an office investigator, a licensed law enforcement officer who typically investigates crimes for the agency.

"It appears he created his own security detail," said Gary Jones, Oklahoma's state auditor and a fellow Republican.

AMERICAN OVERSIGHT

As EPA administrator, Pruitt has been under intense scrutiny since it was first revealed last month that he had stayed last year in a bargain-priced Capitol Hill condo tied to a fossil-fuels lobbyist. Multiple investigations have been launched by government watchdogs and congressional committees looking into luxury travel expenses, outsized security spending and massive raises awarded to political appointees.

Lincoln Ferguson, a former spokesman for the attorney general who now serves as a senior adviser to him at the EPA, said if Pruitt's out-of-state travel was strictly for political purposes, it would have been paid for by campaign funds. But travel records show the trips were arranged through a state-contracted travel agency, and few show any reimbursement was made.

In Oklahoma, Pruitt routinely made the three-hour commute from his home in Tulsa to the state Capitol in Oklahoma City during the working day, according to the calendars.

The entry for Dec. 7, 2015, for example, shows the entry: "8:15 to 9:45, depart Tulsa for OKC" and "3:30-5, depart OKC for Tulsa."

That was despite Pruitt expanding his office's Tulsa branch during his time. The AP reported in December 2016 that the move to bigger, pricier offices in Tulsa were part of a 40 percent increase in his office's expenses as attorney general. Pruitt also added nearly 60 employees to the attorney general's office.

By contrast, Pruitt's predecessor, Democrat Drew Edmondson, who held the attorney general post for 16 years, said he typically used a four-door sedan and drove himself to events.

Ferguson, the senior adviser to Pruitt, said "there was no wasted time" on Pruitt's commutes between Tulsa and Oklahoma City.

"He was working, reviewing documents, on the phone," Ferguson said.

AMERICAN OVERSIGHT

Overall spending on travel by Pruitt's office averaged about $270,000 a year in his last four years as Oklahoma's attorney general, up 26 percent from his predecessor's final year in office. The figures do not include a total for Pruitt's trips alone. The attorney general's office spent $201,000 on travel during his predecessor's last year in the office.

The calendars are heavily redacted and entire days are blacked out.

But the records do show Pruitt frequently traveled to Washington to speak to groups including the Federalist Society; the Club for Growth, a free-enterprise advocacy group; and an anti-abortion rally. He also made similar appearances elsewhere, such as one before the small-government FreedomWorks group in Cleveland on "Battling the Regulatory State."

"If it's not state-related, then the state should not be responsible for" the cost, said Jones, the state auditor. "You can't use any public assets for personal or political reasons."

Records show many of the trips occurred during the workweek, when Pruitt was drawing a state salary of $132,000. Oklahoma broadly bans first-class tickets for state employees. The travel records show only one first-class flight for Pruitt, with a scrawled note on it showing Pruitt's campaign paid for it.

Edmondson, who is now running for governor, said his travel expenses as attorney general typically covered national and regional conventions of attorneys general.

"I think you'll find that his out-of-state travel would far exceed any other attorney general" in Oklahoma, said former Gov. David Walters, a Democrat, who recalled Pruitt speaking before local clubs on topics such as the Obama administration, rather than crime or consumer fraud in Oklahoma.

Conservative groups hosting Pruitt appeared to reimburse most of Pruitt's flights and some

AMERICAN OVERSIGHT

other direct state travel expenses after 2015, and some beforehand.

But on one trip in January 2016, Pruitt billed taxpayers more than $1,000 for a trip to Washington in which he held separate meetings with executives of three conservative think tanks: the APP Foundation, The Federalist Society and Club for Growth. There was no record of reimbursement for that trip. Three weeks later, Pruitt spent the weekend in California for a dinner and a speech to The Federalist Society, which reimbursed the state for his travel.

Associated Press

https://apnews.com/e29d5563fc0c45caa4faa6b3749405a6/Comey-memo:-Trump-complained-about-Flynn's-'judgment-issues

In Comey memos, Trump fixates on 'hookers,' frets over Flynn

By: Mary Clare Jalonick, Eric Tucker, and Chad Day, 4/20/18

In a series of startlingly candid conversations, President Donald Trump told former FBI Director James Comey that he had serious concerns about the judgment of a top adviser, asked about the possibility of jailing journalists and described a boast from Vladimir Putin about Russian prostitutes, according to Comey's notes of the talks obtained by The Associated Press on Thursday night.

The 15 pages of documents contain new details about a series of interactions with Trump that Comey found so unnerving that he chose to document them in writing. Those seven encounters in the weeks and months before Comey's May 2017 firing include a Trump Tower discussion about allegations involving Trump and prostitutes in Moscow; a White House dinner at which Comey says Trump asked him for his loyalty; and a private Oval Office discussion where the ex-FBI head says the president asked him to end an investigation into Michael Flynn, the former White House national security adviser.

The documents had been eagerly anticipated since their existence was first revealed last year, especially since Comey's interactions with Trump are a critical part of special counsel

AMERICAN OVERSIGHT

Robert Mueller's investigation into whether the president sought to obstruct justice. Late Thursday night, Trump tweeted that the memos "show clearly that there was NO COLLUSION and NO OBSTRUCTION."

The president also accused Comey of leaking classified information. The memos obtained by the AP were unclassified, though some portions were blacked out as classified. Details from Comey's memos reported in news stories last year appear to come from the unclassified portions.

In explaining the purpose of creating the memos, which have been provided to Mueller, Comey has said he "knew there might come a day when I would need a record of what had happened" to defend not only himself but the FBI as well.

The memos cover the first three months of the Trump administration, a period of upheaval marked by staff turnover, a cascade of damaging headlines and revelations of an FBI investigation into potential ties between the Trump campaign and Russia. The documents reflect Trump's uneasiness about that investigation, though not always in ways that Comey seemed to anticipate.

In a February 2017 conversation, for instance, Trump told Comey how Putin told him, "we have some of the most beautiful hookers in the world" even as the president adamantly, and repeatedly, distanced himself from a salacious allegation concerning him and prostitutes in Moscow, according to one memo.

In another memo, Comey recounts how Trump at a private White House dinner pointed his fingers at his head and complained that Flynn, his embattled national security adviser, "has serious judgment issues." The president blamed Flynn for failing to alert him promptly to a congratulatory call from a world leader, causing a delay for Trump in returning a message to an official whose name is redacted in the documents.

"I did not comment at any point during this topic and there was no mention or acknowledgment of any FBI interest in or contact with General Flynn," Comey wrote.

AMERICAN OVERSIGHT

By that point, the FBI had already interviewed Flynn about his contacts with the Russian ambassador, Sergey Kislyak, and the Justice Department had already warned White House officials that they were concerned Flynn was vulnerable to blackmail.

Flynn was fired Feb. 13, 2017, after White House officials said he had misled them about his Russian contacts during the transition period by saying that he had not discussed sanctions. The following day, according to a separate memo, Comey says Trump cleared the Oval Office of other officials, encouraged him to let go of the investigation into Flynn and called him a good guy. Flynn pleaded guilty to lying to the FBI and is now cooperating with Mueller's investigation.

The memos reveal that days before Flynn's firing, then-White House chief of staff Reince Priebus asked Comey if Flynn's communications were being monitored under a secret surveillance warrant.

"Do you have a FISA order on Mike Flynn?" Priebus asked Comey, according to the memos, referring to an order under the Foreign Intelligence Surveillance Act.

Comey said he "paused for a few seconds and then said that I would answer here, but that this illustrated the kind of question that had to be asked and answered through established channels."

Comey's response is redacted on the unclassified memos.

The memos also show Trump's continued distress at a dossier of allegations — compiled by an ex-British spy whose work was funded by the Democratic National Committee and the Clinton campaign — examining potential ties between him and his aides and the Kremlin. Comey writes how Trump repeatedly denied to him having been involved in an encounter with Russian prostitutes in a Moscow hotel.

"The President said 'the hookers thing' is nonsense," Comey writes, noting that Trump then

AMERICAN OVERSIGHT

related the conversation with Putin about the "most beautiful hookers." Comey says Trump did not say when Putin had made the comment.

The documents also include the president's musings about pursuing leakers and imprisoning journalists. They also provide insight into Comey's personal and professional opinions. He judges the administration's travel ban to be legally valid, and he takes a swipe at former Attorney General Loretta Lynch, calling her predecessor, Eric Holder, "smarter and more sophisticated and smoother."

The memos were provided to Congress earlier Thursday as House Republicans escalated criticism of the Justice Department, threatening to subpoena the documents and questioning officials.

In a letter sent to three Republican House committee chairmen Thursday evening, Assistant Attorney General Stephen Boyd wrote that the department was sending a classified version of the memos and an unclassified version. The department released Boyd's letter publicly but did not release the memos. The chairmen issued a statement late Thursday saying the memos show that Comey clearly never felt threatened, and Trump didn't obstruct justice.

Justice officials had allowed some lawmakers to view the memos but had never provided copies to Congress. Boyd wrote that the department had also provided the memos to several Senate committees.

Boyd wrote in the letter that the department "consulted the relevant parties" and concluded that releasing the memos would not adversely affect any ongoing investigations. Mueller is investigating potential ties between Russia and Trump's 2016 campaign as well as possible obstruction of justice by the president.

Comey is on a publicity tour to promote his new book, "A Higher Loyalty." He revealed last year that he had written the memos after conversations with Trump.

He said in an interview Thursday with CNN that he's "fine" with the Justice Department

AMERICAN OVERSIGHT

turning his memos over to Congress.

"I think what folks will see if they get to see the memos is I've been consistent since the very beginning, right after my encounters with President Trump, and I'm consistent in the book and tried to be transparent in the book as well," he said.

Washington Post

https://www.washingtonpost.com/politics/trump-hires-giuliani-two-other-attorneys-amid-mounting-legal-turmoil-over-russia/2018/04/19/8346a7ca-4418-11e8-8569-26fda6b404c7_story.html?utm_term=.995f4a24ac4a

Trump hires Giuliana, Two Other Attorneys Amid Mounting Legal Turmoil Over Russia

By: Robert Costa, Josh Dawsey and Rosalind Helderman, 4/19/18

Former New York mayor Rudolph W. Giuliani and two other former federal prosecutors joined President Trump's legal team Thursday following weeks of turbulence and struggles to find attorneys who would agree to represent the president in the ongoing federal probe into Russian election interference.

The reshuffling comes at a particularly tense juncture for Trump, who aides said is increasingly frustrated by special counsel Robert S. Mueller III's investigation and with the senior officials at the Justice Department.

The entry of Giuliani, an experienced attorney with a combative reputation, immediately raises questions about how Trump will engage with Mueller and the leadership at Justice. Some Trump advisers are concerned that the president could use his -executive authority to close or diminish the special counsel probe, which has spawned a parallel investigation in New York targeting his personal attorney.

AMERICAN OVERSIGHT

"I'm doing it because I hope we can negotiate an end to this for the good of the country and because I have high regard for the president and for Bob Mueller," Giuliani said in an interview Thursday.

Trump said in a statement that Giuliani "wants to get this matter quickly resolved."

In recent days, the president has been regularly venting and speculating to aides about his legal status and the expected timeline for the Russia investigation to end, according to associates briefed on the discussions.

Rudolph W. Giuliani was an ardent supporter of President Trump during the 2016 campaign, and the former New York mayor was considered for the post of attorney general. (Mike Segar/Reuters)

Trump also loudly and repeatedly complained to several advisers earlier this week that former FBI director James B. Comey, former deputy FBI director Andrew McCabe and former Democratic presidential nominee Hillary Clinton, among others, should be charged with crimes for misdeeds alleged by Republicans, the associates said.

Although White House officials said Thursday that Trump has not called Justice Department officials or taken any formal action, the persistent grousing has made some advisers anxious, according to two people close to the president. A publicity tour by Comey to promote his book critical of Trump, "A Higher Loyalty," has attracted particular attention from the president, who has disparaged Comey publicly and privately.

Trump also complained this week about Supreme Court Justice Neil M. Gorsuch, saying the judge had proved too liberal in recent cases, according to administration officials who heard about the complaints. Associates said he was incensed that Gorsuch had voted against the administration on an immigration case and said it renewed his doubts that Gorsuch would be a reliable conservative. One top Trump adviser played down the comments as unhappiness with Gorsuch's decision rather than with Gorsuch broadly.

Giuliani, 73, brings a familiarity with several of the legal fronts that Trump is navigating. He is a former associate attorney general and a former U.S. attorney for the Southern

AMERICAN OVERSIGHT

District of New York, which is the office overseeing an investigation of Trump's personal attorney, Michael Cohen.

Trump counsel Jay Sekulow said Thursday that former federal prosecutors Jane Serene Raskin and Marty Raskin, a couple who manage a Florida-based law firm, have also agreed to join the legal team.

Giuliani is certain to come under intense scrutiny for his role. His own pre-election activities two years ago have been the subject of criticism from Democrats, especially television interviews in which he suggested he had sources providing him inside information about the FBI's investigation of Clinton's private email server when she was secretary of state.

A Justice Department Inspector General report on the department's handling of the Clinton investigations is expected to be released in coming weeks and will probably include results of leak investigations regarding the Clinton probe.

Numerous other challenges face the attorneys who will work alongside Sekulow and counsel Ty Cobb — who have functioned as Trump's legal nucleus for weeks following the resignation of John Dowd, a legal veteran and the team's former leader. Dowd stepped down in March amid clashes over strategy and whether Trump should sit for a voluntary interview with Mueller. The legal team has often been beset by infighting.

"The big question is, how's he going to play with everybody else?" said a lawyer involved with the investigation who was not authorized to speak publicly. "Will he be combative Rudy, or will he play well with Mueller's team? Will he try to walk . . . back from the brink and answer the big question, which is whether the president will sit for an interview? And will Trump listen to him?"

Giuliani declined to say whether Trump has made a final decision on whether to sit for an interview with federal investigators. Trump has been mulling it for weeks, moving away from the idea after the home, offices and hotel room of Cohen were raided this month. Trump reacted angrily, calling it "disgraceful."

AMERICAN OVERSIGHT

"It's too early for me to say that," Giuliani replied, when asked whether a Trump interview is unlikely to happen.

Giuliani also declined to discuss whether Deputy Attorney General Rod J. Rosenstein, who has been under fire from conservatives and oversees the Russia probe, could be fired by the president in the coming weeks.

"I'm not involved in anything about those issues. My advice on Mueller has been this: He should be allowed to do his job. He's entitled to do his job."

Giuliani said he formalized his decision in recent days, including over dinner last week at Trump's Mar-a-Lago resort in Florida. Giuliani and Trump spoke Thursday about the legal plan moving forward, along with Sekulow, whom he has known for years and called a friend. He added that he and Cobb also spoke, on Wednesday.

Giuliani — who will take a leave from his law firm, Greenberg Traurig, and is in the midst of a divorce from his third wife — said he would spend a "great deal of time" in Washington working with Trump but would continue to live in New York. He has been frequently been seen holding court at the Trump International Hotel in Washington, dining and drinking with friends and browsing for gourmet cigars.

Trump had considered Giuliani for attorney general and has said in recent weeks he needs a New York-based attorney. Many leading white-collar lawyers, such as former solicitor general Theodore Olson, have declined Trump's entreaties, often citing conflicts or expressing unease about the high-profile case.

Trump is also known to be a difficult client who does not always listen to his attorneys' advice, according to lawyers who know him. And Giuliani, once a top adviser, grew frustrated with his treatment during the transition and had receded from the inner circle.

AMERICAN OVERSIGHT

As he has closely monitored cable-news programs chronicling his presidency and the Mueller probe, Trump has swatted away the notion that he cannot attract prominent attorneys. He has also spoken about his desire for a bolstered team and wondered aloud about the damage that Cohen's legal proceedings could bring, according to the associates briefed on the discussions, who requested anonymity to talk about them.

Giuliani's arrival is part of a broader shift in Trump's inner circle toward the core allies and brusque and brutal style that defined his outsider presidential campaign and his business career. Beyond Mueller, aides said everyone and everything around Trump feels liable to become a target for his wrath as he grapples with difficult issues at home and abroad, in Syria and North Korea.

"What we've been seeing with the president is that he is picking A-level people that he knows are experienced but also know him well," said Trump ally Christopher Ruddy, the president and CEO of Newsmax Media, a conservative outlet. "One of the problems in the first year was that people didn't work out because they didn't know him and they didn't have experience for the position."

EPA names three Pennsylvania Superfund sites as promising for redevelopment

By Mary Ann Thomas, 1/17/18, 9:51 PM

The federal Environmental Protection Agency named three Pennsylvania sites among 30 on the Superfund National Priorities List(NPL) with the greatest redevelopment and commercial

AMERICAN OVERSIGHT

potential.

The three Pennsylvania sites are: The BoRit Asbestos Superfund site in Ambler, Montgomery County; the Metal Bank Superfund site in northeast Philadelphia, and the Crater Resources Inc./Keystone Coke Co./Alan Wood Steel Co. Superfund site (aka Crater Resources) in Upper Merion Township, Montgomery County.

From the early 1900s to the late 1960s, the BoRit Asbestos Superfund site was the repository of discarded asbestos-containing material from a nearby asbestos products manufacturing plant. The site has an asbestos waste pile, a reservoir, and a closed park.

The Site was added to the NPL in 2009 for cleanup because nearby resdients could potentially be exposed to airborne asbestos and to asbestos contamination in and along Tannery Run, Rose Valley Creek, and the Wissahickon Creek.

As a Superfund site, BoRit has been eligible for a cleanup using federal Superfund program funding. EPA retains the right to pursue responsible parties for reimbursement of funds at all Superfund sites.

So far, the 32-acre site has had stream bank stabilization, installation of a soil cover across many areas of the site, and reservoir draining, re-grading, capping and refilling.

EPA selected the final cleanup plan for the site in 2017, which incorporates the previous cleanup with post-construction sampling, routine inspections, long-term operation and maintenance activities, and controls regarding approval of future use activities.

“EPA is more than a collaborative partner to remediate the nation's most contaminated sites, we're also working to successfully integrate Superfund sites back into communities across the country,” said EPA Administrator Scott Pruitt in a press release issued Wednesday by the Pennsylvania Department of Environmental Protection.

AMERICAN OVERSIGHT

"Today's redevelopment list incorporates Superfund sites ready to become catalysts for economic growth and revitalization," he said.

Superfund sites on the list have significant redevelopment potential based on previous outside interest, access to transportation corridors, land values, and other critical development drivers, according to the DEP.

Denver Post

Superfund site near Vail lands on EPA's list of cleanup areas with big redevelopment and commercial potential

By Jesse Paul, 1/17/18, 9:22 AM

A federal environmental cleanup site near Vail has landed on the Environmental Protection Agency's national list of contaminated areas with the greatest expected redevelopment and commercial potential.

The Eagle Mine Superfund site just outside of Minturn is among nearly two dozen federal cleanups across the U.S. that were on the list released Wednesday.

"EPA is more than a collaborative partner to remediate the nation's most contaminated sites, we're also working to successfully integrate Superfund sites back into communities across the country," EPA Administrator Scott Pruitt said in a written statement. "Today's redevelopment list incorporates Superfund sites ready to become catalysts for economic growth and revitalization."

AMERICAN OVERSIGHT

The Trump administration says the redevelopment list is meant to direct interested developers and potential owners to Superfund sites that could be transformed into something of great value.

The list comes as Pruitt has been working to overhaul and streamline the EPA's Superfund program. That process has included identifying the Gold King Mine near Silverton and surrounding mining sites as priorities for federal cleanup.

The Eagle Mine site, which sits on about 250 acres south of Minturn in Eagle County, has been on the EPA's National Priorities List (also known as Superfund) since 1986 because of heavy metals draining into the Eagle River and uncontrolled waste piles.

Since 2001, the site — which includes a water treatment plant — has been in a post-remedy operation and maintenance phase of cleanup, according to the EPA.

The mine closed in 1984 after roughly a century of pulling gold, silver, copper and zinc out of the ground, leaving behind elevated levels of arsenic, cadmium, copper, lead and zinc in soil, surface water and groundwater, the EPA says.

Because of the site's proximity to Vail and Beaver Creek, the area has for years been eyed for development — albeit not without some controversy from local residents concerned with the prospect of too much growth.

The EPA says it has been working with state health officials and development company Battle North, LLC, to complete cleanup at the Eagle Mine to allow for homes to be built there in the future.

"Over the past decades, cleanup actions taken at the Eagle Mine site have addressed soil, groundwater, and mine waste contamination and significantly improved water quality in the Eagle River," EPA Regional Administrator Doug Benevento said in a written statement. "Our recent efforts with the Colorado Department of Public Health and Environment and Battle North

AMERICAN OVERSIGHT

build upon that progress with new remedies for soil contamination that will make portions of the Eagle Mine site ready for residential use."

The full list of Superfund sites with redevelopment potential can be viewed here.

The Post and Courier

https://www.postandcourier.com/business/charleston-s-koppers-superfund-site-has-high-redevelopment-potential-epa/article_80ed66c4-fbc2-11e7-a0a4-13b04a72a545.html

Charleston's Koppers Superfund site has high redevelopment potential, EPA says

By John McDermott, 1/18/18

The Koppers tract in the Charleston Neck area is among 31 polluted U.S. properties with the highest potential for commercial reuse, according to the agency that has overseen the cleanup of the federal Superfund site since the mid-1990s.

The Environmental Protection Agency announced the designation Wednesday. It was part of an effort to "integrate Superfund sites back into communities across the country," administrator Scott Pruitt said.

"Today's redevelopment list incorporates Superfund sites ready to become catalysts for economic growth and revitalization," he said in statement.

Koppers Co. Inc., later known as Beazer East Inc., operated a lumber treatment business on the Milford Street property from 1940 to 1978. The EPA placed the land on its National Priorities List in 1994, citing the contaminants the company left behind near the banks of the Ashley

AMERICAN OVERSIGHT

River.

The lengthy cleanup included digging up and disposing of polluted dirt, and placing a cap over portions of the 102-acre property. Most of the remediation was completed in 2003, according to the EPA.

The tract is now set to come under new ownership as part of a 182-acre real estate deal that includes neighboring parcels of land. Once marketed under the name "Magnolia," the infill project across from the Wagener Terrace neighborhood is expected to include a mix of multifamily residences, commercial space and parks.

Also, the developer, an affiliate of Texas-based Highland Resources Inc., has said it will invest up to $30 million in additional environmental improvements to the Superfund site before starting construction.

The Houston firm topped other bidders with an $8.6 million offer to buy part of the Magnolia footprint at a U.S. Bankruptcy Court sale last year. The company also has said it was negotiating to purchase the neighboring Koppers property from a private investment group.

Highland Resources CEO Charles Wolcott said he could not provide an update on the purchases until after his firm's board of directors meets Thursday.

Want to revitalize a depressed economy? The EPA can help.

AMERICAN OVERSIGHT

By James S. Rosien, 1/18/18

Anaconda has been part of the largest Superfund site in the United States since 1983, when the Environmental Protection Agency began working to clean up 300 square miles of heavy-metal contaminated soil left by more than a century of copper smelting. So far that effort has meant cleaning up over 350 contaminated yards in town and the surrounding area and transforming 250 acres of an old smelter site into a world-class golf course.

Superfund, however, cannot fix everything — in particular for downtown commercial properties, which are essential for economic development and revitalization of rural Montana towns like Anaconda but have been blighted by real or perceived contamination that was unrelated to the smelter.

In an effort to find other means to combat blight and reinvigorate the downtown business district, Anaconda, Butte and the Southwest Montana region are looking at another EPA program that until recently had been unavailable to Superfund sites, one that has seen hundreds of properties identified and cleaned up throughout the state: Brownfields.

In urban planning parlance, a "brownfield" is simply a property where either the presence or perceived presence of contamination by pollutants or hazardous substances prevents entrepreneurs from redeveloping or reusing it for industrial or commercial purposes. In 1993, the EPA established the Brownfields Program to provide funding for environmental assessments and cleanup of eligible properties to remove what would otherwise be an obstacle to their returning to productive use.

Since 2003, approximately $10 million in Brownfields assessment grants and revolving loan funds has been disbursed to eight economic development agencies, local governments and coalitions in Montana through the Department of Environmental Quality (DEQ), covering 41 of the state's 56 counties. The seven counties making up Southwest Montana – Anaconda-Deer Lodge, Beaverhead, Butte-Silver Bow, Granite, Jefferson, Madison and Powell – are not among them due to the fact that until recently the EPA was prohibited by law from disbursing Brownfields funds to communities that already receive Superfund support.

AMERICAN OVERSIGHT

This legal barrier was put in place to prevent property owners from "double-dipping" into federal funding, said Brandon Kingsbury, DEQ's Brownfields coordinator for petroleum cleanup. It wasn't until August of 2016 that the EPA relented, lifted the barrier and began approving Brownfields assessment grants to individual property owners and developers within Superfund sites, Kingsbury said. "That was the green light," he said. "We're excited to do more."

In the hope of acquiring a larger pot of funding for their communities, Anaconda Local Development Corporation, Butte-Silver Bow Local Development Corporation and Headwaters RC&D, which serves the seven aforementioned Southwest Montana counties, applied jointly for Brownfields funding that same year.

The program is a merit-based national grant competition, however, and their application did not score high enough to receive it. Only two were awarded in the entire state that year: Bear Paw Development Corporation, located in Havre covering five counties on Montana's Highline, and the City of Kalispell, both receiving $400,000 to conduct assessments.

Undeterred, they applied again and are awaiting word on whether they've been approved or not. Jim Davison, executive director of the Anaconda Local Development Corporation who has been "literally fighting for 20 years" to bring Brownfields to Anaconda, said the program would address problems that Superfund cannot. "Not all cleanup is Superfund cleanup," Davison said. "There are lots of areas in any community where there are waste and other issues that need cleaning up to reuse the properties. There may be hazardous materials, or the perception of hazardous materials such as fuel or asbestos, chemical spills or solvents, and that makes it difficult to reuse these properties. So how do we go build on a dirty piece of property? Or do we build on a new property, and what's the cost of that?"

Having to pay upwards of $20,000 to conduct one environmental assessment just to see if a property actually is contaminated – let alone pay potentially hundreds of thousands of dollars more for cleanup – can kill a project before it begins, Davison said.

That's why local development agencies in Montana are so keen on the Brownfields Program, because it allows commercially viable properties to come back into use rather than waste away.

One city that has benefited from the program is Havre. Paul Tuss, Bear Paw Development

AMERICAN OVERSIGHT

Corporation executive director, said there is "no better economic development tool in our toolbox" than Brownfields.

Tuss gave the example of the Short Stop, a former gas station and convenience store, where subsequent to its closure it was discovered there was a "very significant" petroleum leak coming from underground.

"It's a prime location, a great property," Tuss said. "We used the funds to mitigate and eradicate the contamination, we took the soil that had been contaminated with petroleum and replaced it with clean soil. The reality is that is a property that would have remained unusable because no one could receive financing on it if the contamination wasn't cleaned up. We went to work to clean it up, and it has transitioned into Havre's newest real estate office. We've transitioned a convenience store into a very nice, modern real estate office."

Another example Tuss gave was of an old corner gas station across the street from his office that is now becoming a brewery. "It's a real 1930s Art Deco kind of gas station," Tuss said. "The contamination was discovered and has been cleaned up, and we have an entrepreneur who is transitioning it into a microbrewery... We're turning a property that is almost worse than worthless and making it part of the vibrancy of downtown Havre."

"That's the whole purpose of Brownfields. It's an economic development tool that communities can use to not have to build something new but take something that's already there, cleaning it up and reusing it in a productive way."

EPA Pushing Superfund Sites Toward Redevelopment

AMERICAN OVERSIGHT

By Sylvia Carignan, 1/18/18

The EPA is pushing more than 30 contaminated sites into the spotlight to draw in potential land investors and developers, but some of those involved with the sites say they wish the agency would do more to make them financially attractive.

The Environmental Protection Agency's newest list of contaminated sites, released Jan. 17, promotes properties with the potential for redevelopment. But city officials and land use attorneys are looking for more specific action and incentives from the federal agency than the agency's promise to put redevelopment training, tools and resources toward the sites.

The EPA will have to do more to entice investors, Linda R. Shaw, partner at Knauf Shaw LLP in Rochester, N.Y., told Bloomberg Environment.

"The remedy ends up being interim," she said. "It doesn't make the site typically clean enough to make somebody feel comfortable buying it."

Sites Spread Across Country

The sites include the U.S. Smelter and Lead Refinery Superfund site in East Chicago, Ind., Quendall Terminal in Washington state, and contaminated groundwater sites in Libby, Mont. The sites are spread out across the country and EPA's 10 regional offices.

Many of the sites are still on the National Priorities List. Some are portions of a Superfund site that is still undergoing remediation.

Potential investors are especially wary of putting money into Superfund sites. "Banks still don't feel comfortable when the S-word is part of a site," Shaw said.

AMERICAN OVERSIGHT

A spokesperson for the agency didn't immediately respond to questions from Bloomberg Environment. The agency wants to "successfully integrate Superfund sites back into communities across the country," EPA Administrator Scott Pruitt said in a news release.

Congress has taken an interest in Pruitt's plans to modernize Superfund. A House and Energy Commerce subcommittee on environment is holding a hearing Jan. 18 on the issue.

State Model?

The benefits of New York's Voluntary Cleanup Program, originally built to draw developers to contaminated brownfields, recently opened up to state Superfund sites. Shaw said the program could be a model for EPA to follow.

The program provides incentives to interested parties if the party agrees to pay for cleanup. The incentives are tax credits, liability release, a guarantee that the interested party won't have to remediate contamination off their property, and clear state cleanup standards.

Similar cleanup standards don't exist at the federal level, and interested parties who take on Superfund sites are likely to find more contamination than they anticipated.

"The problem is how do you quantify the [financial] risk, and that's what investors are interested in," Shaw said. "You don't know what it's going to cost until you start digging."

But, Shaw said, contaminated sites would benefit from having a redevelopment or reuse plan.

"Whatever state the Superfund site is in, there should be some kind of collaboration with that state agency [and] the EPA to actually come up with a project on that site," she said. By incorporating cleanup with reuse, "the project can actually help make the remediation less expensive."

AMERICAN OVERSIGHT

Quendall Terminal

The Quendall Terminal Superfund site in Renton, Wash., is part of Pruitt's Jan. 17 list. The site was a creosote manufacturing facility where coal tar and creosote have been released into soil, water, and sediment, according to the EPA.

The city of Renton is waiting for the EPA to make a decision about the site's final remedy, said Vanessa Dolbee, planning manager for the city.

"We've done pretty much everything we can do to get the site positioned for redevelopment, in terms of all the land use entitlements," Dolbee told Bloomberg Environment in December.

The city council has approved the construction of mixed-use development, including 40,000 square feet for commercial use and almost 700 residential units. The developer needs building permits, but the project is on hold until the EPA acts.

"It's completely out of our hands because it's at the federal level," she said.

The site is also on Pruitt's Dec. 8 list of contaminated sites that need "immediate, intense action," which acknowledges the EPA's need to quickly determine the best remedy for the site.

Making Progress

The list originates from EPA Administrator Scott Pruitt's Superfund task force, which released recommendations to alter the program last year.

One of the main goals of those recommendations was to get contaminated sites back into use by

AMERICAN OVERSIGHT

getting potentially responsible parties or third parties to invest in redevelopment.

The EPA's Superfund Redevelopment Initiative assesses the benefits of Superfund site reuse—including job creation and increases in property values—by site, by region, and nationally.

The initiative is tracking nearly 500 Superfund sites in reuse, which house over 6,600 businesses, according to the agency.

The Hill

http://thehill.com/blogs/congress-blog/energy-environment/369441-dont-shortchange-the-epa-businesses-and-communities

Don't shortchange the EPA — businesses and communities depend on the agency

By Dean Burke, 1/17/18, 6:10 PM

The city of Tacoma, Wash., is the home to one of the first ever EPA-designated Superfund sites in the United States. Here in our community, we have seen firsthand how funding and support from the Environmental Protection Agency can transform an American city for the better.

Members of Congress now have less than a week to create a budget for FY2018. For many agencies, large gaps exist between the various funding levels proposed by the White House, House of Representatives, and the Senate, but the EPA is particularly vulnerable.

For more than 100 years, our city shoreline was seen as a means to an end—valued primarily as a site for industry and an engine for growth, but with a harmful downside. Smelters and chemical

AMERICAN OVERSIGHT

plants provided jobs and supported a growing city, but, over time, they introduced extreme levels of pollution into our neighborhoods and waterways.

Tacoma is located about 30 miles south of Seattle, on the picturesque eastern shore of Puget Sound. From many parts of our shoreline, there are stunning views of Mount Rainier. However, for decades, Tacoma residents have been conditioned to stay away from the waterfront. The shoreline was seen as a dirty, dangerous and industrialized place.

Over the past decade, Tacoma residents' relationship with the waterfront has changed dramatically. What once seemed an uninviting industrial zone is now a welcoming venue for outdoor recreation and social interaction. As the director of the South Sound Sports Commission, I have witnessed a profound change in how the residents of my city think about our shoreline, which has had a broader impact on how they imagine our city's identity.

I often drive along the waterfront. A few years ago, it was surprising to see one or two people paddling on Puget Sound, even on one of our warmer summer nights. Today, the Tacoma shoreline and the Thea Foss Waterway, which is a Superfund-designated waterway, supports five separate businesses renting kayaks and paddleboards to recreational boaters. This is evidence of the literal and figurative sea change that the city has experienced over the past decade.

Further down the shoreline at the Asarco Smelter Site, one of the nation's first Superfund sites, a $28 million cleanup facilitated by the EPA boosted residential property values in the immediate area by $52 million over the course of twenty years. The cleanup also made possible the construction of a billion dollar, mixed-use development project called Point Ruston. That's right—there's now a luxury resort, with restaurants, stores and a mile-long walking path, on a Superfund site.

It's been heartening to see my city embrace the newly restored beauty of the Puget Sound and recognize that the shoreline now offers new sorts of economic opportunities.

While we have seen tremendous progress, there is still a lot to do to restore Tacoma's waterfront and keep our water and air safe. As members of Congress negotiate over federal funding and revenue, they need to know that their constituents – whether they live in healthy neighborhoods, or polluted ones, or those that were once polluted and are now healthy – are paying attention.

AMERICAN OVERSIGHT

Members of Congress: The EPA has catalyzed incredible transformations in Tacoma, but this work isn't finished—here and in other communities across the United States. Please maintain healthy funding levels for the EPA, and watch business and communities flourish as a result.

CBS News

https://www.cbsnews.com/news/scott-pruitt-says-industry-is-necessary-partner-for-environmental-protection/

EPA chief Scott Pruitt: Industry is necessary partner

By Jacqueline Alemany, 1/17/18, 5:18 PM

Environmental Protection Agency Administrator Scott Pruitt told CBS News that a partnership with "industry" is necessary in order for the agency to protect the environment.

"This paradigm that says we have to choose industry over the environment or the environment over industry is the old way of thinking," Pruitt told CBS News' chief White House correspondent Major Garrett in an interview Wednesday.

"Now that serves political ends but it doesn't serve the environment because I will tell you this: to achieve what we want to achieve in environmental protection, environmental stewardship, we need the partnership of industry," he added.

Pruitt, who has been accused by critics of being too cozy with special interest groups and executives and advocates of the fossil fuel industry, defended these relationships as necessary for environmental stewardship. The former Oklahoma Attorney General, cited his experience as a prosecutor, and called it "wrong-headed" to assume that all industries are bad actors.

AMERICAN OVERSIGHT

"We should be about stewardship and we should be about partnership," Pruitt said. "Now, I will tell you as a former attorney general, I've led a grand jury. I've prosecuted bad actors. And I will tell you, if we have companies, industries, citizens who violate the law, we are going to prosecute them and we are going to hold them accountable. But we should not start from the premise that all people are that way or that all industries are that way. That is just simply wrong-headed. And it doesn't achieve good outcomes."

Pruitt has also come under fire for appointing executives from the coal, gas and chemical industries to senior staff positions at the EPA. He has swiftly sought to reverse, delay and block more regulations than any other administrator in the history of the agency, including the Obama-era Clean Power Plan and Clean Water Rule.

"We had many regulations that this agency had adopted historical that had created confusion, and did not serve advancing protection of the environment," Pruitt argued.

Pruitt confirmed reports that he has eased the EPA's safety review process for assessing the risk of new chemicals being produced by manufacturers to the environmental and humans under the Toxic Substances Control Act. He told CBS News that the agency will no longer require manufacturers to sign consent orders that restrict the use of potentially hazardous chemicals in the future. Pruitt claimed that the EPA's new approach is "absolutely" safer than the old approach.

"What I've said about consent orders and consent decrees is that we shouldn't regulate through litigation," Pruitt argued. "If there are industries or companies out there that don't do what the law requires, we're going to issue consent orders and enforcement actions against them, and already have, to hold them accountable."

"From our perspective, when I speak to clarity in regulations, I believe most companies, most states, most citizens want to comply with the law," Pruitt added.

In December, a federal appeals court ordered the EPA to revise the antiquated lead paint hazard standards after the Trump administration had requested a six year delay to review the rule. Pruitt

AMERICAN OVERSIGHT

would not say whether or not the EPA planned to appeal the ruling or take it to the Supreme Court, and deferred the decision to the Justice Department. The rule has not been updated in nearly 17 years.

"The legal process is something that Justice will be the decider upon the procedural approach to that," Pruitt said. "But I can tell you this: it's important for this agency to get that rule and get it done."

"Indeed the EPA itself has acknowledge that 'lead poisoning is the number one environmental health threat to children ages 6 and younger, and that the current standards are insufficient," the ruling by the U.S. Court of Appeals for the Ninth Circuit reads.

Pruitt added that he wanted to "declare a war on lead" and also eradicate lead from drinking water within 10 years, primarily through an infrastructure package.

Addressing some controversial staff appointments that have presented a conflict of interest, like Nancy Beck -- a former senior director in the American Chemistry Council who is now deputy assistant administrator in the office of Chemical Safety and Pollution Protection at the EPA -- Pruitt said he rejected the premise that "we can't be both about stewardship and also economic development and growth."

Pruitt has also appointed other staffers who have publicly questioned sound scientific data, like Michael Honeycutt, chairman of the EPA's Science Advisory Board who once said in an interview that lowering the ozone "might have a negative health benefit." Pruitt dismissed his comments.

"Ozone is something that we most definitely have to regulate," he said. "It's a very important thing to regulate."

AMERICAN OVERSIGHT

Wall Street Journal

https://www.wsj.com/articles/scott-pruitt-aims-to-accelerate-his-efforts-to-remake-the-epa-1516220866?mod=searchresults&page=1&pos=1

Scott Pruitt Aims to Accelerate His Efforts to Remake the EPA

By Eli Stokols and Timothy Puko, 1/17/18, 3:43 PM

WASHINGTON—Environmental Protection Agency chief Scott Pruitt plans to use his second year on the job to accelerate efforts to remake the agency, saying he wants to speed its permitting processes and transform a culture he says is bureaucratic.

In an interview with The Wall Street Journal, Mr. Pruitt outlined the changes he is looking to make in year two: repealing and rewriting Obama-era rules for power plant emissions, speeding up the EPA's permit review process, implementing weekly performance assessments across the agency and fostering a public debate about climate change.

Mr. Pruitt has long questioned the scientific consensus that human activities are a significant factor in rising global temperatures and severe weather, and pose a potential existential threat to life on Earth in decades to come.

Discussing his plans for the year, Mr. Pruitt emphasized the importance of moving quickly. "There's tremendous opportunity to show really significant results to the American people in a really short time frame," Mr. Pruitt said.

In his first year on the job, the former Oklahoma attorney general swiftly repealed several of former President Barack Obama's signature policies and encouraged President Donald Trump to pursue a withdrawal from the Paris climate agreement. Mr. Trump announced his intention to exit from the agreement in June.

AMERICAN OVERSIGHT

Mr. Pruitt has memorialized the moment in his office with a framed photo of the two of them in the Rose Garden and the president's autograph on Mr. Pruitt's prepared remarks, "Scott—Great Job!"

Going forward, Mr. Pruitt wants to use metrics to measure the weekly performance of every EPA office and wants final permit decisions completed within six months. He already has a multicolored pyramid diagram outlining his plan to streamline the agency's bureaucracy and organizational workflow.

"That's the thing that's been so striking to me as I've come into this position…is just the lack of focus and lack of energy and lack of commitment to actually get results," said Mr. Pruitt, speaking during a 30-minute interview in his wood-paneled office this week. "We have permits that literally are sitting on a shelf, and just sitting there because there's just no attention, no leadership, no direction. It's that simple."

Some of Mr. Pruitt's policies, and his criticism of the agency as bureaucratic and hidebound, have turned off some career employees, including many scientists at the EPA. The agency saw 700 staffers depart last year.

The agency's work force is about 4.1% smaller than at the end of 2016, putting it among executive departments and agencies with the biggest declines, according to data from the Office of Personnel Management.

"At the same time [Mr. Pruitt] is making these comments, he's basically doing everything he can to gut the agency of quality personnel," said John O'Grady, president of the American Federation of Government Employees Council 238, which represents EPA workers. "They are basically going to break government and then somehow declare victory."

Mr. O'Grady pointed to Mr. Pruitt's sometimes antagonistic position towards agency scientists, saying it would be difficult for the agency to finish research, write policies and grant permits more quickly if the staff and resources keep shrinking. The Trump administration has threatened budget cuts, and departures have brought staff to about 14,000 workers, their lowest point in more than 30 years and down 9% from 2015.

AMERICAN OVERSIGHT

Mr. Pruitt said he inherited an agency that employs hundreds of scientists and nevertheless contracts out some of its research.

The EPA chief also said he believes the agency exceeded its legal mandate under President Barack Obama in creating new rules for power plants in the name of slowing the pace of climate change. "This agency for years has speculated about harm that may be happening 100 years from now as opposed to what's right in their own backyard," said Mr. Pruitt.

In 2018, he said he plans to focus on cleaning up toxic sites in the Superfund program and with what he calls "the war on lead."

"I really believe that we can eradicate lead from our drinking supply within a decade. We just have to get serious about it," Mr. Pruitt said. "We haven't been focused and urgent about the things that matter and can impact people's health today, and we need to do that."

"Everything the agency does is to protect public health and the public from future risks," said Gina McCarthy, a former EPA administrator during the Obama administration. "You don't stop smoking because it kills you when you smoke the cigarette; it's because it kills you later. It's the same argument with climate change. You take action today to protect health today and in the future."

Ms. McCarthy, who now teaches at the Harvard School of Public Health, said Mr. Pruitt's statement that the effects of climate change won't be felt for decades "rings extremely hollow" after a year in which the federal government spent $306 billion responding to extreme weather events. "Anyone suggesting that climate change isn't happening or damaging us today is not keeping their eyes open," she said.

Asked if his urgency has anything to do with future plans to leave, Mr. Pruitt played down a recent report by Politico suggesting he is angling to succeed Attorney General Jeff Sessions, but he didn't fully rule anything out. "I thoroughly, thoroughly enjoy what I'm doing," he said.

AMERICAN OVERSIGHT

“What does it say in scripture? ‘Whatever your hand finds to do, do it with all your might.’ And that’s what I’m doing.”

E&E Greenwire

https://www.eenews.net/greenwire/2018/01/18/stories/1060071327

'Our focus here should be on stewardship' — Pruitt

By Kevin Bogardus, 1/18/18

U.S. EPA Administrator Scott Pruitt is touting his work already done at the agency and his plans for EPA over the coming years.

In an interview with CBS News, Pruitt said EPA has sought to provide "regulatory certainty" over the past year as the agency has proposed to roll back several Obama-era regulations like the Clean Power Plan, which was designed to curb power plants' carbon dioxide emissions. Asked whether the philosophy behind his actions was meant to protect the environment or business, the EPA chief said it was neither.

"Well, it's neither. I mean, our focus here should be on stewardship," Pruitt said.

Regarding the Clean Power Plan, Pruitt disapproved of the rule, saying it was an example of EPA "picking winners and losers in the development of electricity" by favoring renewable energy over the use of natural resources like coal and natural gas.

Pruitt also set a goal for EPA of eradicating lead from drinking water within 10 years. "It can be done," he said.

AMERICAN OVERSIGHT

In addition, the administrator was asked about his top aides coming to EPA from industry and whether the American public should be comfortable with that transition. Pruitt said he doesn't buy into that "paradigm."

"This paradigm that says we have to choose industry over, you know, the environment, or the environment over industry is the old way of thinking," Pruitt said.

"And I will tell you if we have companies, industries, citizens who violate the law, we're gonna prosecute them. But we should not start on the premise that all people are that way or all industries are that way."

Pruitt also was asked about remarks by one of his newest science advisers — Michael Honeycutt, chairman of EPA's Science Advisory Board — that discounted the health benefits of reducing ozone pollution.

"Ozone is something that we — we most definitely have to regulate. It's a very important thing that we regulate," Pruitt said, disagreeing with those comments.

In fact, Pruitt has no choice in the matter because the Clean Air Act requires EPA to regulate ground-level ozone, a lung irritant that is the main ingredient in smog.

In the last decade, however, repeated battles have erupted over how strict the agency's ozone standard should be to adequately protect public health. Honeycutt, the toxicology director for the Texas Commission on Environmental Quality, was a prominent foe of EPA's 2015 decision to tighten the threshold to 70 parts per billion, even helping to arrange a workshop to make the case for leaving the standard at its previous 75-ppb level (Greenwire, April 14, 2015).

Pruitt named him last fall to chair the Science Advisory Board, which has no direct role in setting air quality standards but furnishes outside expertise to the agency on an array of topics.

AMERICAN OVERSIGHT

Pruitt gave a separate interview to The Wall Street Journal discussing his plans at EPA, which was published yesterday. The administrator didn't deny outright reports that he is interested in succeeding Jeff Sessions as attorney general in President Trump's Cabinet (E&E News PM, Jan. 5).

"I thoroughly, thoroughly enjoy what I'm doing," Pruitt said. "What does it say in Scripture? 'Whatever your hand finds to do, do it with all your might.' And that's what I'm doing."

Politico

https://www.politicopro.com/energy/whiteboard/2018/01/source-pruitt-to-visit-japan-next-week-413219

Source: Pruitt to visit Japan next week

By Emily Holden, 1/17/18, 6:50 PM

EPA Administrator Scott Pruitt will go to Japan next week to discuss "general environment cooperation," an administration official told POLITICO today.

Details of who Pruitt will meet with or what he plans to discuss were not immediately available. EPA officials refused to confirm the trip ahead of time, as they have in the past.

EPA's inspector general is already investigating Pruitt's travel and recently expanded its probe at the request of a Democratic lawmaker to include a December trip to Morocco, where Pruitt discussed natural gas imports, in addition to other environmental issues.

AMERICAN OVERSIGHT

Pruitt also reportedly plans to visit Israel from Jan. 26-28, officials there have said. It's unclear if the trips could be combined.

Japan is the leading importer of liquefied natural gas and has also increasingly relied on coal-fired power following the Fukushima nuclear disaster in 2011. One of the biggest American coal companies has a deal to send a quarter of its exports to Japan, the Wall Street Journal reported yesterday.

EPA spokesman Jahan Wilcox in an email today said "every meeting that Administrator Pruitt attends is posted on https://www.epa.gov." That website is updated after the fact and does not include the full details of Pruitt's schedule. The agency has previously cited security concerns in refusing to share details of Pruitt's activities ahead of time.

The Hill

http://thehill.com/policy/energy-environment/369394-toyota-says-it-wont-partner-with-epa-despite-pruitt-claim

Toyota says it won't partner with EPA despite Pruitt claim

By Miranda Green, 1/17/18, 3:01 PM

Global automaker Toyota is not partnering with the Environmental Protection Agency (EPA), despite December comments from EPA Administrator Scott Pruitt that the two would be working together on a review of the agency's management practices.

Christopher Reynolds, Executive Vice President of Corporate Resources at Toyota, wrote in a Jan. 9 letter to the Environmental Working Group that "at this point there are no definitive plans

AMERICAN OVERSIGHT

to move forward with a project" with the EPA.

Reynolds went on to call the discussions Toyota was having with EPA "preliminary."

Reynolds was responding to a letter the Environmental Working Group sent him in December questioning Toyota's decision to work with EPA under their Toyota Production System Support program.

News of the potential partnership came to light while Pruitt was testifying at a hearing on Capitol Hill on Dec. 8.

Speaking to the House Energy and Commerce Subcommittee on the Environment, Pruitt said, "We are actually partnering with Toyota to begin a lean process at the agency to evaluate management practices."

Pruitt made the comment in response to Rep. John Shimkus (R-Ill.), who asked him about the agency's workload practices.

“We continue to have collaborations with Toyota to better improve agency outcomes," an EPA spokesperson told The Hill.

At the time Toyota acknowledged to HuffPost that it was speaking with the EPA about how it could help them incorporate their style of operations efficiency.

However, Karen Nielsen, a Toyota spokeswoman, downplayed the extent to which discussions between the company and the EPA had taken place, telling HuffPost Wednesday, “We were always just in talks anyway, so it was not a done deal. We were just looking into working with them, but that was never a promised thing.”

AMERICAN OVERSIGHT

EPA officials and environmentalists had called the potential partnership a conflict of interest, as the EPA oversees regulation of companies including Toyota.

FOIA lawsuits jump — report

By Kevin Bogardus, 1/17/18

U.S. EPA has seen a surge of Freedom of Information Act lawsuits under the Trump administration.

Legal complaints filed under the public records law against the environmental agency went up from 10 such suits in fiscal 2016 to 35 in fiscal 2017, an increase of 250 percent.

EPA is not the only federal agency that saw its FOIA lawsuits substantially increase over the past year. As detailed in a report released yesterday by the Transactional Records Access Clearinghouse's FOIA Project, there were 651 FOIA lawsuits across the government in fiscal 2017, a rise of 26 percent over the prior year.

"The agencies experiencing significantly more FOIA lawsuits often were government offices in charge of areas where there was heightened public concern," said the report by the Syracuse University research center, making note of EPA.

AMERICAN OVERSIGHT

The Department of the Interior also saw a spike in its FOIA lawsuits, from 42 in fiscal 2016 to 68 to fiscal 2017.

The Justice Department registered the most FOIA lawsuits at 197 in fiscal 2017, an increase of 20 percent from the prior year. Next came the Department of Homeland Security, with 98 such suits filed in fiscal 2017, a 46 percent spike. Interior was ranked third behind those two departments, according to the report.

Not every agency saw an increase in FOIA lawsuits. The Energy Department saw such complaints drop from 10 in fiscal 2016 to nine in fiscal 2017.

The growing number of FOIA lawsuits is increasing the backlog at the courts, leading to slower resolution of the cases.

"Court backlogs of pending FOIA litigation have climbed even faster, with hundreds of cases waiting resolution. Indeed, the backlog is already approaching 900 cases and unless steps are taken may top a thousand in the near future," said the report.

EPA has been sued under FOIA for several records dealing with Administrator Scott Pruitt and his aides at the agency, including his private calendar. Last year, American Oversight, a liberal-leaning watchdog group, sued under FOIA and won the release of a copy of the EPA chief's schedule.

Agency dodged water safety program reports since 2006 — IG

By Cecelia Smith-Schoenwalder, 1/18/18

U.S. EPA failed for 12 years to turn over documents to Congress regarding its grants under a program to monitor coastal water safety, the agency's inspector general has found.

Under the Beaches Environmental Assessment and Coastal Health (BEACH) Act, EPA provides grants to help states monitor coastal water quality and notifies the public of contamination problems.

The missing reports would "inform Congress and the public about efforts to implement the act, the need for additional water quality indicators, and the need for improved monitoring methodologies," according to the IG.

Issues with reporting date back to the George W. Bush administration and continue into the present, the IG found. EPA last submitted its required quadrennial report about the BEACH Act to Congress in 2006. Later, in fiscal 2013, the Obama administration did not request further funding for the program's grants, saying the program was "mature."

In September 2017, EPA said in its budget submission to the Office of Management and Budget for fiscal 2019 that reports related to this program should not be necessary, according to the IG's report.

Because Congress still funds the program, the IG said the reporting requirement remains.

EPA's Office of Water told the IG it plans to "await the White House's response to that request before initiating another report."

EPA official declines to testify at Superfund hearing

By Miranda Green, 1/17/18, 4:29 PM

Environmental Protection Agency (EPA) Administrator Scott Pruitt's point man for Superfund efforts has declined to testify at a House Energy and Commerce Committee hearing on the sites' cleanup efforts scheduled for Thursday.

After previously promising to speak at the hearing, Albert Kelly withdrew his name from the witness list last week, citing "an unavoidable scheduling conflict," according to a Democratic spokesperson for the committee.

Kelly, a former chairman of Oklahoma-based SpiritBank, made headlines recently following news that he had been banned from working in the banking industry. The Intercept also reported that the Federal Deposit Insurance Corporation (FDIC) had fined Kelly $125,000 in May 2017 for violating the law.

According to a consent order obtained by the The Intercept through a Freedom of Information Act request, the FDIC believed it had reason to think Kelly "violated a law or regulation, by entering into an agreement pertaining to a loan by the Bank without FDIC approval."

Two weeks later, Pruitt appointed Kelly his senior adviser and head of the Superfund Task Force.

AMERICAN OVERSIGHT

An EPA spokesperson said that an Office of Land and Emergency Management official will now testify at Thursday's committee hearing. The spokesperson added that Kelly was never formally invited to testify through a letter by the committee and only Principal Deputy Assistant Administrator Barry Breen received a letter.

“The House Committee on Energy and Commerce requested a witness for this hearing and EPA offered Principal Deputy Assistant Administrator Barry Breen from the office of Land and Emergency Management, which oversees the [Superfund] program," the EPA spokesperson told The Hill.

However, the Democratic spokesperson for the committee said EPA's distinction was splitting hairs.

"[The EPA is] falling back on a technicality as an excuse for Mr. Kelly’s unacceptable absence. E&C Democrats were advised by the Majority in December that Mr. Kelly would attend the Superfund hearing," said the spokesperson. "The Majority didn’t send the formal invitations until last week, but Mr. Kelly was scheduled to appear before the formal invites ever went out."

Pruitt's decision to pick Kelly for the position was met with some criticism due to Kelly's lack of a scientific background. Despite his long tenure in finance, Kelly has no prior experience in environmental policy or with Superfund, one of the EPA's more complicated programs.

Citizens Petitions, Lawsuits on Chemical Rules Likely to Grow

AMERICAN OVERSIGHT

By Pat Rizzuto, 1/18/18

Chemical manufacturers should expect to see more petitions from citizen groups asking the EPA to regulate substances now that the nation's primary chemicals law has been amended, attorneys tell Bloomberg Environment.

Environmental, animal welfare, and other organizations will likely use every provision allowed under the amended Toxic Substances Control Act to compel stricter Environmental Protection Agency regulation of chemicals, said Lynn Bergeson, managing partner with Bergeson & Campbell P.C.

Those TSCA amendments required the EPA for the first time to review the risks of chemicals in commerce and made it easier for the agency to obtain the information it needs to evaluate health and environmental concerns.

The provisions increase the likelihood that citizens groups will push the EPA to take various actions, such as collecting information companies have about their chemicals, Herbert Estreicher, a partner with Keller and Heckman LLP, told Bloomberg Environment.

During a recent webinar hosted by that law firm, Estreicher urged chemical manufacturers and their trade associations to track such petitions and "think hard about engaging," for example, by providing the EPA information relevant to whatever decision the petition seeks.

Karyn Schmidt, an attorney with the American Chemistry Council, told Bloomberg Environment it's too soon to know whether citizens' petitions will increase due to the amended TSCA, but paying attention to them "is sound legal advice."

New Avenues

Court decisions on citizens' rulemaking petitions are among the many types of litigation likely to

AMERICAN OVERSIGHT

increase as the EPA issues rules and other decisions to carry out its interpretations of TSCA.

"Like it or not, the courts will be playing a central role in deciding how the EPA implements the new TSCA," Estreicher said during the webinar.

Environmental organizations are showing an "unprecedented" interest in TSCA and therefore more likely to bring lawsuits, he said.

Court rulings in these cases and others cannot be rolled back easily by the executive branch, said Eric Gotting, also a partner at Keller and Heckman, referring to the regulatory rollbacks that occur when a new administration takes office.

No Deference Required

If the EPA denies a petition, the groups can challenge that decision in court. Such lawsuits could be particularly interesting because of the role of deference, Gotting told Bloomberg Environment.

Courts are not required to give the agency's decision any deference in these types of cases, he said. Section 21, the provision of TSCA that authorizes citizens petitions states that the court should give a lawsuit challenging the EPA's denial a new, or "de novo," hearing.

That means the petitioner gets a chance to demonstrate to the court that a chemical may present an unreasonable risk to health or the environment or meets other TSCA criteria warranting stricter regulation, he said.

Typically, courts review challenges to agencies' rules under the arbitrary and capricious standard, which means they often affirm agency decisions unless they find them totally irrational, Gotting said.

AMERICAN OVERSIGHT

Under the TSCA standard for citizens' petitions, however, "you have a judge not asking if EPA's decision was rational, but making its own decision on very complex scientific issues," Gotting said. That increases the uncertainty for the EPA and plaintiffs regarding how the court will rule, he added.

Fluoride Petition

Bergeson, Estreicher, and Gotting all cited a lawsuit that attracted attention this year after a federal district court ruled late December that the EPA erred in its interpretation of amended TSCA's requirements for citizens' petitions.

The case, Food & Water Watch v. EPA, involves a coalition of health advocates that petitioned the agency soon after TSCA was amended seeking a ban on fluoride in drinking water. The groups argued drinking the chemical does not prevent tooth decay, but can be neurotoxic, especially to children's developing brains.

The EPA denied the petition saying the agency's interpretation of the amended TSCA as requiring citizens petitions "to address the full set of conditions of use for a chemical substance."

Not true, ruled the U.S. District Court for the Northern District of California in San Francisco. "A citizen petition need not evaluate all conditions of use," the court said, allowing the case to proceed.

Before the court takes up the merits of the citizens' petition, it must rule on the scope of the information it will consider, but this initial decision allowing the case to proceed is important, Gotting said.

It means petitioners do not have to address every use of a chemical when they ask the EPA to regulate a substance, and that makes it harder for the EPA to easily dismiss such petitions, he said.

AMERICAN OVERSIGHT

Those factors increase the likelihood that the agency's rejections of citizens rulemaking petitions may get a full hearing in court, Gotting said.

The Food & Water Watch case attracted friend-of-the-court briefs supporting citizen suits from the Natural Resources Defense Council and Safer Chemicals Healthy Families.

A Food & Water Watch attorney says they have no immediate plans to file further citizen suits. However, if the court rules favorably and broadens the scope of information that it can consider as it reviews the fluoride petition, that "will certainly make Section 21 petitions a more promising avenue for future legal actions by environmental health organizations such as ours," according to the attorney, Michael Connett.

Other Citizens' Suits

Bergeson added that "even before the dust-up occasioned by Food & Water Watch, stakeholders were widely expected to avail themselves of every tool under TSCA, including Section 21 citizens' petitions and Section 20 civil actions, to influence the interpretation of new TSCA."

Section 21 allows citizens to petition the EPA to initiate a rule. Section 21 authorizes citizens to file lawsuits against any person or agency alleged to be violating:

• the statute,

• rules promulgated under multiple sections of the law, or

• orders, for example those the EPA can issue requiring manufacturers of new chemicals to not release the chemical to water.

"Companies and other regulated entities would be well advised to step up their monitoring

AMERICAN OVERSIGHT

efforts to ensure Section 21 citizen petitions and other forms of citizen advocacy (Section 20 litigation) are promptly identified, considered, and addressed," Bergeson said by email.

GAO to review Pruitt's phone booth

By Kevin Bogardus, 1/17/18

The Government Accountability Office will scrutinize U.S. EPA Administrator Scott Pruitt's secure phone booth.

EPA Inspector General Arthur Elkins said in a letter to Rep. Pete DeFazio (D-Ore.) that his office had learned that GAO had "accepted a congressional request to review appropriation law questions regarding the installation of the security booth."

"The GAO will be reviewing virtually the same scope of issues that we planned to examine," Elkins said in the Jan. 10 letter, which was shared on social media last week by Democrats on the House Transportation and Infrastructure Committee, where DeFazio is ranking member.

Chuck Young, a GAO spokesman, confirmed to E&E News that the congressional watchdog office is reviewing the matter.

"We have been asked for an appropriations law legal opinion on this, and we are doing the work, as mentioned in the letter," Young said.

AMERICAN OVERSIGHT

At a congressional hearing last month, Pruitt called the facility "a secure phone line" used for sensitive communications, including talks with the White House (E&E News PM, Dec. 7, 2017).

The EPA inspector general also planned to examine Pruitt's secure communications facility but now will no longer conduct that review.

EPA's internal watchdog told Rep. Frank Pallone (D-N.J.), ranking member on the House Energy and Commerce Committee, in a Dec. 8 letter that it planned to review the facility but has since learned about GAO's coming probe (Greenwire, Dec. 12, 2017). The EPA IG has decided to not review the privacy booth in order to not duplicate efforts with GAO, according to EPA IG spokeswoman Tia Elbaum.

"We are no longer going to review the privacy booth since the GAO has initiated their own engagement," Elbaum told E&E News.

Nevertheless, the EPA watchdog does plan to review spending on Pruitt's personal security detail, which has been boosted to an around-the-clock presence, unlike for past administrators. In the same letter to DeFazio, the IG said the lawmaker had raised "issues about whether appropriated funds are available for the expenditures you question, and whether the EPA complied with applicable oversight controls in deciding to make the expenditures."

"These latter issues are within the authority of the IG to review, and we will do so," Elkins said.

Elbaum confirmed that the IG will review the security detail spending, saying, "We are only going to review Administrator Pruitt's security detail appropriations."

In his letter to DeFazio, Elkins offered caveats to the review of Pruitt's security detail. His office had not found information "indicating any criminal violations." In addition, the IG "will not second-guess decisions" within the agency's discretion, including whether Pruitt was justified to transfer EPA staff from enforcement duties to his security detail.

AMERICAN OVERSIGHT

DeFazio as well as Rep. Grace Napolitano (D-Calif.) had requested the review of the security detail spending in an Oct. 4 letter to the IG. The lawmakers cited reporting by E&E News that found that EPA had spent nearly twice as much on Pruitt's security detail during his first months on the job compared with his predecessors (E&E Daily, Oct. 5, 2017).

An EPA spokesman declined to comment when asked by E&E News about the reviews by GAO and the EPA IG related to spending on Pruitt's privacy booth and security detail, respectively.

Arguments in 'exceptional' events suit set for March 22

By Sean Reilly, 1/17/18

A federal appellate court will hold oral arguments March 22 on a legal challenge brought by environmental groups to U.S. EPA's latest guidance for handling "exceptional" air pollution events.

The U.S. Court of Appeals for the District of Columbia Circuit set the date in an order yesterday; the makeup of the three-judge panel hearing the arguments will be announced later, according to the order.

The guidance, issued under the Obama administration in September 2016, is geared to making it easier for states to get a pass on "exceedances" of air quality standards for ground-level ozone, particulate matter and other common pollutants because of wildfires and other forces outside

AMERICAN OVERSIGHT

regulators' direct control.

The agency acted in response to recurring complaints from state regulators that the previous system for proving an exceptional event was costly and time-consuming.

Under President Trump, EPA recently signaled that still more changes are in the works "to allow for greater state flexibility in flagging and excluding" pollution stemming from exceptional events from the data used to determine compliance with federal standards, according to a rundown of regulatory priorities released last month.

But the Natural Resources Defense Council and the Sierra Club, which challenged the Obama-era guidance with the lawsuit filed in late 2016, argue that EPA has already overstepped. While exceptional events are supposed to be the result of natural forces, they said in a brief last spring, the guidance allows "regular industrial pollution in vast amounts" to qualify and thus "violate Clean Air Act health standards" (Greenwire, May 22, 2017).

The two environmental groups have it wrong, EPA attorneys said in their August 2017 response brief. Under the agency's definition, the term "natural event ... covers only a small set of phenomena, namely acts of nature and their resulting emissions." The agency also claimed that the court should accept its reading under the Chevron doctrine. Under that doctrine, named for a 1984 Supreme Court case, courts defer to federal agencies when Congress hasn't explicitly addressed an issue.

As part of a 2005 law, lawmakers ordered EPA to account for exceptional events but have never defined "natural event," the brief said. The agency's interpretation "reasonably fills in the gap" and "limits natural events to those events with predominantly natural causes, while recognizing the reality that few acts of nature are truly free from human influences," according to the brief.

In an acknowledgement of the real-world stakes, both the American Petroleum Institute and a coalition of farm groups that includes the Kansas Livestock Association and National Cattlemen's Beef Association, have submitted friend-of-court briefs siding with EPA.

AMERICAN OVERSIGHT

"EPA has provided a thorough and convincing explanation for its natural event definition," API said in its brief, arguing that the lawsuit should be "dismissed or denied."

Study: White House abandoning science advice at unprecedented levels

By Miranda Green, 1/18/18, 10:27 AM

A report released by the Union of Concerned Scientists (UCS) on Thursday provides a stark portrayal of how the federal government's relationship with scientists has deteriorated since President Donald Trump took office.

According to the report by UCS, a non-profit group of independent scientists, the administration's skeptical views on science advisers is represented by diminished staffing at the White House and across various government agencies.

President Trump is the first president in four decades to not appoint a presidential science adviser, the report said. Less than a third of the White House Office of Science and Technology Policy (OSTP) is full, with only 38 of 130 total positions filled.

In terms of government posts at the National Academies of Science that are designated as "scientists appointees," Trump has only filled 20 out of 77 positions. Comparatively, at the same point in their respective administrations, President Obama had 62 roles filled and President George W. Bush had filled 51.

AMERICAN OVERSIGHT

Looking at science advisory boards and committees across the various government agencies, the UCS study also found that membership dropped 14 percent due to factors such as freezing of membership and disbanding of committees altogether. Examples include the Food and Drug Administration's (FDA) disbanded Food Advisory Committee and the Interior Department's (DOI) disbanded climate science advisory committee.

The total number of science advisory committee meetings in 2017 also decreased 20 percent from 2016, the study found.

The drop in the frequency of meetings of science advisory boards was most notable at key federal science agencies: the Department of Energy (DOE), the Environmental Protection Agency (EPA) and DOI. All three met less often in 2017 than at any time since 1997.

The findings confirmed promises made by various leaders within the Trump administration to increase the voices of the fossil fuel industry in advisory boards.

For example, Environmental Protection Agency (EPA) Administrator Scott Pruitt has noted a desire to include more industry voices as a way to level the playing field. Earlier this year he also banned all experts who receive grants from the EPA from serving as advisors on any committee.

Looking at the EPA specifically, the study found that looking forward to 2018, 23 percent of those sitting on the agency's Science Advisory Board will be industry representatives, compared to only 6 percent in 2017. Also, 50 percent of individuals on the board will be from academia, compared to 79 percent in 2017.

State auditor wants to release investigation Pruitt kept secret

By Mike Soraghan, 1/18/18

Oklahoma's state auditor wants a court order allowing him to release an investigative audit of Superfund spending suppressed by U.S. EPA Administrator Scott Pruitt when he was Oklahoma attorney general.

In a legal filing yesterday, State Auditor Gary Jones said Pruitt had already released the audit years ago, without authorization, to the organization Jones had been investigating.

The filing was Jones' response to a lawsuit filed last year by a Washington watchdog group seeking release of the audit, done in response to allegations of corruption at the Tar Creek Superfund site near Miami, Okla. (Greenwire, Nov. 27, 2017). As EPA administrator, Pruitt is now in charge of Superfund.

"The auditor's response completely vindicates our position and demonstrates why this audit should be released to the public immediately," said Daniel Stevens, the executive director of the group, called Campaign for Accountability.

Also notable in Jones' filing yesterday is that he has hired his own attorney, Mickey Dodson of Oklahoma City. Jones, who is now seeking the Republican nomination to run for governor, had previously relied on the legal advice of the state attorney general's office in saying he was not allowed to release the audit.

E&E News has also requested the Tar Creek audit but is not involved in the lawsuit.

Tar Creek is a 40-square-mile site in the far northeastern corner of Oklahoma where land and water were contaminated by decades of lead and zinc mining that ended in the 1950s. In the early 1980s, EPA deemed it the most contaminated site in the country.

AMERICAN OVERSIGHT

As part of the cleanup, the federal government provided money in 2009 to buy out homeowners and demolish the homes. The work was overseen by a board of area residents called the Lead-Impacted Communities Relocation Assistance Trust, or LICRAT. But companies that sought demolition work complained that contracts were being unfairly steered to companies favored by board members.

Pruitt requested the audit from Jones' office in April 2011 after the staff of then-Sen. Tom Coburn (R-Okla.) forwarded the corruption allegations.

After Jones' staff completed the audit and sent it to the attorney general's office, Pruitt decided against prosecution. Jones then asked Pruitt to release the audit publicly, but Pruitt said no.

At the time, Pruitt said he was concerned the audit contained "unsubstantiated criminal accusations" against "private citizens." Jones called that reasoning "baffling," saying the claims were substantiated and involved public officials.

The attorney general's office, now headed by Mike Hunter, reviewed Jones' request again this summer after E&E News and another media outlet asked for the audit documents. Hunter's office also said no, but the reason changed. This time, the response was that any report of a criminal investigation remains confidential.

But Jones' response yesterday included a new wrinkle. He said Pruitt had released the document to the attorney for LICRAT. Jones' filing cited a 2014 memo from the attorney apparently responding to the report.

In his response, Jones asked that a judge issue a writ of mandamus ordering him to release the audit report and supporting records.

The Campaign for Accountability has also filed an ethics complaint against Interior Secretary

AMERICAN OVERSIGHT

Ryan Zinke in recent months.

A spokeswoman for the Oklahoma Attorney General's Office declined to comment on the filing, saying a copy wasn't yet available. EPA press officials did not respond to requests for comment.

E&E Daily

https://www.eenews.net/eedaily/stories/1060071255/search?keyword=EPA

Dems bash Pruitt over cleanup rules

By Dylan Brown, 1/18/18

Eight Senate Democrats yesterday rebuked U.S. EPA's recent decision not to issue new regulations governing the Superfund insurance companies must have to conduct hardrock mining.

In a letter, the senators accused Administrator Scott Pruitt of failing to protect taxpayers from the environmental risks of non-coal mining, a top source of pollution with an estimated 500,000 abandoned mines nationwide.

In December, Pruitt signed a final rule updating Section 108(b) of the Superfund law, the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) (Greenwire, Dec. 4, 2017).

Two years before, a federal court had ordered EPA to draft new hardrock financial assurance standards more than three decades after the agency was supposed to have set them.

AMERICAN OVERSIGHT

But, Pruitt rejected the Obama administration's proposed additional bonding requirements. Citing concerns among regulators and the regulated community, the final rule imposed no new assurance requirements because of existing federal and state programs created since CERCLA's passage.

The Democrats disagreed, arguing EPA inaction helped create $50 billion in cleanup costs at hardrock Superfund sites.

"By conjuring up the baseless determination that there is no risk of taxpayer funded cleanups from hard rock mining and therefore not requiring assurances, you are assuring that we will continue to create high-cost environmental disasters," the senators wrote.

Sen. Tom Udall (D-N.M.), a longtime champion of mining reform, signed the letter with Sens. Dick Durbin (D-Ill.), Ron Wyden (D-Ore.), Michael Bennet (D-Colo.), Sheldon Whitehouse (D-R.I.), Dianne Feinstein (D-Calif.), Bernie Sanders (I-Vt.) and Tammy Baldwin (D-Wis.).

NY, Connecticut file lawsuit seeking US action on smog

1/17/18, 2:45 PM

ALBANY, N.Y. — The attorneys general for New York and Connecticut have filed a lawsuit against the Trump administration in the latest multi-state effort to compel federal regulators to reduce smog blowing in from upwind states.

AMERICAN OVERSIGHT

Eric Schneiderman of New York and George Jepsen of Connecticut filed the lawsuit Wednesday in federal court in Manhattan. The suit says the Environmental Protection Agency is violating the federal Clean Air Act by failing to curb air pollution that blows east into New York from upwind states such as Illinois and Michigan.

The legal action is at least the fourth in the past year involving mostly East Coast states seeking to have the EPA regulate out-of-state pollutants. Last month, New York and seven other states filed a lawsuit in a federal appeals court on the same issue.

Cleveland.com

http://www.cleveland.com/court-justice/index.ssf/2018/01/epa_overturns_approval_of_ohio_1.html

EPA overturns approval of Ohio's decision to omit its Lake Erie from 'impaired' waters list

By Eric Heisig, 1/17/18, 6:14 PM

CLEVELAND, Ohio -- The U.S. Environmental Protection Agency withdrew its approval of Ohio's decision to keep Lake Erie off a list of impaired bodies of water, which rankled environmentalists who pointed to harmful algal blooms contained within the lake.

The U.S. EPA's reversal of its May decision was memorialized in a letter sent Friday to Ohio EPA Director Craig Butler and filed in federal court by the Environmental Law & Policy Center. The organization is suing the U.S. EPA over its initial approval Ohio's biennial impaired waters list.

AMERICAN OVERSIGHT

The letter, written by Assistant Administrator David Ross, says the U.S. EPA re-evaluated the Lake Erie designation "and determined that the submission is incomplete and thus not fully consistent with the requirements of ... the Clean Water Act and EPA's regulations." It says Ohio did not show that it compiled all the necessary data to say its portion of the lake was not impaired.

The letter asks the Ohio EPA to perform a new evaluation of the state's portion of Lake Erie and send it by April 9.

(You can read the letter here or at the bottom of the story.)

Lake Erie's most significant pollutants come from fertilizers running off into the lake, primarily by way of the Maumee River in Toledo.

That pollution tainted the area's supply of drinking water in the past. In 2014, 400,000 Toledo area residents were temporarily without drinking water after harmful toxins from algal blooms fouled the water supply.

Butler has said the impaired waters designation is "immaterial" and that Ohio, Michigan and Ontario have an agreement to reduce harmful nutrient runoff into the lake by 40 percent by 2025. The Environmental Law & Policy Center argues that the impaired waters designation is an important step in addressing pollution in the lake.

Organization Executive Director Howard Learner treated the letter as a victory, as the center had sued the U.S. EPA's to challenge its previous decision.

"The letter confirms that we're right on the legal and factual arguments we made in the federal district court," Learner said, adding that the U.S. EPA has effectively "confessed error."

AMERICAN OVERSIGHT

Butler on Wednesday described the lawsuit as an "academic legal question" at this point, since the state is set to soon conduct an evaluation for its 2018 list.

"For the ELPC to jump up and down and declare victory is a little overblown to me," Butler said.

He said the state did not include Lake Erie on its 2016 list because it did not have a good way to measure conditions caused by algae and whether problems have improved or worsened.

When the Ohio EPA asked the federal government for a way to measure, the U.S. EPA said it did not have one, Butler said.

Butler said researchers at Ohio State and Bowling Green State universities are developing a tool to measure whether Ohio's portion of the lake is impaired. The plan is to use that scale for the next evaluation, he said.

Learner said his organization is still asking a federal judge to rule that the U.S. EPA violated the Clean Water Act through its initial approval of Ohio's list. The organization is also asking the judge to order the U.S. EPA to conduct its own evaluation, as federal rules mandate that it conduct one instead of asking a state to do so.

"It is worth noting that the next biennial iteration of Ohio's ... list is already due on April 1, 2018, ... meaning that U.S. EPA is essentially giving Ohio EPA a 'free pass' on its deficient 2016 listing," the organization wrote in a court filing Tuesday.

Spokeswoman Tricia Lynn said the federal EPA does not comment on pending litigation.

AMERICAN OVERSIGHT

Chicago Tribune

Lawsuit accuses U.S. Steel of polluting Lake Michigan with toxic chromium

By Michael Hawthorne, 1/18/18, 7:00 AM

As a group of Lake Michigan surfers filed a lawsuit Wednesday accusing U.S. Steel of repeatedly violating the federal Clean Water Act, it appears their earlier threat of legal action is having the intended effect.

Hours after the Surfrider Foundation filed its lawsuit in U.S. District Court in Hammond, U.S. Steel announced it is close to reaching a settlement with federal and state officials regarding spills of toxic chromium from its Midwest Plant, part of a complex of steel mills that divides the Indiana Dunes National Lakeshore in Portage.

U.S. Steel, the U.S. Environmental Protection Agency and the Indiana Department of Environmental Management declined to provide details.

The two government agencies began negotiating privately with the steelmaker after the surfing group enlisted the Abrams Environmental Law Clinic at the University of Chicago to research pollution violations at U.S. Steel and other factories on the southwest shore of Lake Michigan.

Citing information law students gleaned from public records, the clinic filed notice in November that it planned to sue for improvements on behalf of the Chicago chapter of Surfrider, a nonprofit group that represents an active band of Great Lakes surfers.

Federal law allows citizens to challenge companies on their own about water pollution violations but requires a warning 60 days before filing suit.

AMERICAN OVERSIGHT

"When a corporation discharges massive amounts of water pollution into public areas that are popular spots for families and recreation on an ongoing basis, they need to be held accountable for it," said Mitch McNeil, chairman of Surfrider's Chicago chapter.

Beaches near the Midwest Plant offer some of the best waves on Lake Michigan, McNeil said. But many surfers opt to stay away after swimming through what he described as dark-brown water that smells alternately like metal, sewage, petroleum or a used ashtray.

State records show the Midwest Plant has violated chromium limits in its water pollution permit at least four times since 2013. An April spill included 298 pounds of hexavalent chromium, a highly toxic version of the metal made infamous by the movie "Erin Brockovich."

Operators of the water supply for the nearby town of Ogden Dunes responded by temporarily shutting off its Lake Michigan intake, Chicago conducted emergency testing of its own water supply and the National Park Service closed four beaches as a precaution.

After another spill in late October, neither the company nor Indiana regulators informed the public. A notice U.S. Steel sent to the state agency requested "confidential treatment" of the incident. The U.S. EPA learned about it from a Tribune reporter.

A state inspector later determined that U.S. Steel had failed to test for hexavalent chromium in a ditch that empties into Lake Michigan, even after a worker spotted blue liquid "with visible solids" pouring from one of the plant's sewer pipes.

In December, Chicago Mayor Rahm Emanuel said the city was planning to file its own lawsuit, citing the steel mill's close proximity to a Lake Michigan drinking water intake off 68th Street.

Cathy Stepp, the Trump administration's new regional EPA administrator, last week rejected Emanuel's request for city lawyers to be involved in the negotiations with U.S. Steel.

AMERICAN OVERSIGHT

"We believe that the compliance measures … will go far in protecting Burns Harbor and Lake Michigan from unlawful discharges and spills," Stepp wrote in a Jan. 11 letter to Edward Siskel, the city's corporation counsel.

U.S. Steel and the Indiana agency issued similar statements Wednesday.

"We acknowledge and regret the incidents and have consistently worked to identify, report, investigate, and correct each issue," U.S. Steel said in a statement. "We are driven by our core value of environmental stewardship, which establishes our firm commitment to compliance with environmental rules and regulations."

Mark Templeton, director of the U. of C. law clinic, remained skeptical.

"Once again, the U.S. EPA and IDEM are asking citizens to trust them about this issue," Templeton said. "All we see is a lot of talk and no action."

Smelly wrecked boats await disposal after Irma

1/17/18

AMERICAN OVERSIGHT

Seminole Boat Ramp in Miami is home to a yacht graveyard, where unclaimed boats wrecked by Hurricane Irma lie on their sides waiting to be claimed or demolished.

The storm left the boats in odd places throughout the city — even on a high school football field. But now they've all been deposited together at a marina that stinks of sewage, gasoline and rotting wood.

Florida does not require boat insurance, meaning owners who cannot afford to remove or repair them have simply abandoned their vessels.

That has left the cleanup to a coalition of state and federal agencies called the Emergency Support Functions, which includes Florida Fish and Wildlife Conservation Commission (FWC), the Coast Guard and U.S. EPA.

Over 2,000 boats have been removed so far, and if they aren't claimed, they will be crushed and put into a landfill by the Emergency Support Functions.

"A firm timetable is unavailable," said Rob Klepper, spokesman for the FWC's law enforcement division. "The FWC has to reach out to all those boat owners and see if they will take care of their boat or relinquish their rights and have it destroyed. It can be fairly difficult to contact owners depending on how and if the title has been transferred" (Linda Robertson, Miami Herald, Jan. 16). — NS

Myrtle Creek assures residents that its drinking water is safe

By Emily Hoard, 1/17/18

Rest easy, residents of Myrtle Creek. According to health standards established by the Environmental Protection Agency, trace amounts of radium in drinking water are perfectly safe.

The response comes after a story published Saturday that more than half of Americans could be drinking water with traces of radium, according to an environmental advocacy group.

In 2011, Environmental Working Group listed Myrtle Creek's water with an average radium level of 0.6 picoCuries per liter, well below the federal Environmental Protection Agency's established maximum contaminant level of 5 pC/L.

Myrtle Creek City Administrator Sean Negherbon said the city's drinking water continues to more than meet guidelines from the Safe Drinking Water Act.

"Our goal at the city of Myrtle Creek is to provide you with a safe and dependable supply of drinking water," Negherbon wrote in a statement. He said the city strives to improve its water treatment process and protect its water resources in accordance with the Safe Drinking Water Act, which allows the EPA to set federal standards for drinking water.

Negherbon said drinking water, including bottled water, is expected to contain at least small amounts of contaminants, the presence of which do not necessarily pose a health risk.

"As water travels over the surface of the land or through the ground, it dissolves naturally occurring minerals and, in some cases, radioactive material, and can pick up substances resulting from the presence of animals or from human activity," he wrote.

AMERICAN OVERSIGHT

The city of Myrtle Creek treats water from Springbrook Springs and the South Umpqua River, and water from both sources showed small amounts of radium — the average result of 0.6 picoCuries per liter — detected in three of six samples during the city's most recent testing in 2011. No radium was detected in the other three samples.

"Detecting a contaminant at any level does not always mean there is a risk to public health," Negherbon said.

The Safe Drinking Water Act established a scientific process to evaluate potential health risks of contaminants and analyze the costs and benefits of potential regulations, he said. The act requires water systems to test for radium every nine years.

Negherbon said the city of Myrtle Creek's Consumer Confidence Report is available online at cityofmyrtlecreek.com and at City Hall.

Sen Markey Questions - scott-pruitt-qfr-responses-01.18.2017.pdf
Adm. Pruitt Nom Hearing Transcript.pdf

Hello All,

Attached please find the full hearing transcript for Administrator Pruitt's nomination hearing. The dialogue with Senator Markey can be found on pgs. 63-67; 144-149; and 199-203 and the questions from Senator Harris can be found on pgs. 79-86.

I have also attached the questions for the record Administrator Pruitt received following his hearing. Additionally, I specifically pulled questions from Senator Markey; however, Senator Harris did not submit any questions for the record.

Let me know if you have any additional thoughts or questions.

Best,

Tony

AMERICAN OVERSIGHT

Senate Environment and Public Works Committee
Hearing entitled, "Nomination of Attorney General Scott Pruitt to be Administrator of the U.S. Environmental Protection Agency"
January 18, 2017
Questions for the Record for the Honorable E. Scott Pruitt

Senator Booker:

1. For many years I have worked with the EPA on the Passaic River superfund clean-up project in my home city of Newark. In 2016, the EPA announced an historic plan to remediate the Passaic River from toxic chemicals, PCBs, and other contaminants that resulted from the production of Agent Orange. The project will remove 3.5 million cubic yards of toxic sediment from the lower eight miles of the Passaic River in New Jersey—the largest environmental dredging project in the history of the federal Superfund program.
a. If confirmed do you commit to make implementation of the Passaic River cleanup project a priority?
b. If confirmed do you commit to carrying out the EPA Region II March 3, 2016 "Record of Decision" for the Lower 8.3 miles of the Lower Passaic River in a timely and efficient manner?

I am not familiar with the details of the remedy that has been selected for the Passaic River Superfund site, but if confirmed, I expect to make clean up of contaminated sites one of my priorities and will seek input from Congress and relevant stakeholders before taking action in this matter.

2. As the former Mayor of Newark, I have seen how low-income and minority communities living in close proximity to the port of Newark are exposed to high levels of air pollution resulting in serious health problems. Across the nation 13 million people—3.5 million of whom are children—live near major marine ports or rail yards. What is your plan to address the pressing environmental justice concerns regarding poor air quality near major seaports and other congested nodes in our nation's freight network? I have been a champion of the bipartisan Diesel Emissions Reduction Act (DERA) Program that helps replace diesel engines and helps make major sea ports and inland transportation hubs cleaner and more efficient. If confirmed can you commit to supporting the DERA program?

As I committed to you during the meeting in your office, I understand there are wide ranging variety of environmental justice issues affecting urban and rural America. In fact, as you will recall, I've committed to work with your office and visit impacted areas with you. I am also aware that the Diesel Emissions Reduction Act Program has received bipartisan support from

AMERICAN OVERSIGHT

members of the Environment and Public Works Committee. If confirmed, I would like to work with members of Congress to best direct resources to bipartisan initiatives.

3. Climate change is one of the most pressing issues currently facing the planet. Rising sea levels and extreme weather are currently threatening the safety and security of my constituents in New Jersey. Lower income and vulnerable communities are disproportionately impacted by the extreme heat and flooding events that are becoming more common and more severe. Given the immediate and increasing threat to my constituents and to people everywhere, what is your plan to address climate change?

If confirmed, I will work to achieve the objectives of EPA-administered laws consistent with the process and framework established by Congress. I will work closely with the states in establishing and implementing regulatory standards to ensure a meaningful and effective advancement of these objectives.

4. In 2016, troubling reports of lead contamination in school drinking water in New Jersey and other areas of the country made clear the urgent need to test school drinking water and remediate school drinking water infrastructure that is contaminating the water our children drink.
a. What is your plan to prioritize and expedite the EPA's efforts to eliminate lead contamination in school drinking water?

If confirmed, I will fully carry out EPA's authorities, including its authorities under the Safe Drinking Water Act. I note that in the WIIN Act, Congress amended the Safe Drinking Water Act to authorize funding for voluntary school lead testing. If confirmed and if funding is provided, I will carry out that program.

5. If you are confirmed, how would EPA respond when a state permits pollution to be discharged into a smaller waterway that leads to contamination of drinking water supplies in a downstream state?

If confirmed, I would follow the processes set forth in the Clean Water Act and its implementing regulations.

6. How do you define "environmental justice"? Do you think it's a serious issue?

I am familiar with the concept of environmental justice. As I testified, the Administrator plays an important role regarding environmental justice. I agree that it is important that all Americans be treated equally under the law, including the environmental laws.

AMERICAN OVERSIGHT

7. Decades of peer-reviewed academic and government research demonstrate that low-income communities and communities of color disproportionately experience environmental burdens compared to other populations in the United States. Do you agree with this conclusion? If not, why?

As I testified at the hearing, I am familiar with the concept of environmental justice and believe the Administrator plays an important role in this regard. I agree that it is important that all Americans be treated equally under the law, including the environmental laws.

8. What do you believe are the legal obligations of EPA to ensure that recipients of EPA funds comply with Title VI of the Civil Rights Act of 1964?

The obligations of recipients of federal funds are defined by the statutes and regulations to which you refer. Those statutes and regulations speak for themselves.

9. There are currently hundreds of unresolved Title VI civil rights complaints before EPA. Recent reports from EPA's OIG and independent organizations have documented EPA's long-standing failure to enforce Title VI. If confirmed, what will you do as EPA Administrator to address this?

If confirmed, I would expect to be briefed by staff and review any recommendations by the Office of Inspector General before taking action on this issue.

10. Indigenous communities are consistently targeted for energy extraction, nuclear waste, uranium mining and/or oil and natural gas pipelines. How will you address this moving forward?

If confirmed, I will faithfully execute all laws enacted by Congress relating to protection of indigenous communities.

11. Children living in communities of color and low-income communities have the highest blood lead levels of all children in the United States, and even some developing countries. As Administrator, what steps would you take to address this?

I am concerned about high-blood levels in children and children's health generally. As I testified, the Administrator has a significant role regarding environmental issues. If confirmed, I would expect to be briefed to learn about EPA's legal authorities and ongoing programs and outstanding recommendations from the Inspector General, if any, concerning this issue before taking action.

AMERICAN OVERSIGHT

12. As Administrator will you continue to convene and implement the advice and recommendations of the National Environmental Justice Advisory Council, a federal advisory committee to EPA since 1993?

As I testified, the Administrator plays an important role regarding environmental justice. I am not personally familiar with the legal authorities or activities concerning this advisory committee but I would expect, if confirmed, to be briefed by staff about ongoing programs and activities before taking any action. If confirmed, I would work to faithfully execute the laws EPA is responsible for administering, in order to protect human health and the environment for all Americans. If confirmed, I would expect EPA to operate in an open and transparent manner, consider the views of stakeholders as appropriate, act based on sound science, and follow the laws as established by Congress.

13. As Administrator, will you work to have of EPA's EJ 2020 Plan fully implemented?

As I testified, the Administrator plays an important role regarding environmental justice. I am personally unfamiliar with the details of current initiatives regarding environmental justice referenced in the question, but I would expect, if confirmed, to be briefed by staff about ongoing programs and activities before taking any action.

14. Do you intend to meet minority community members and leaders who have concerns about an environmental or health issue within your EPA jurisdiction?

Yes, if confirmed.

15. Public participation is the cornerstone of a healthy democracy and a basic component of good US policy development and enforcement. What are your plans to maximize inclusion and participation in decision-making processes by historically marginalized communities of color?

As I testified, the Administrator plays an important role regarding environmental justice. If confirmed, I would expect EPA to operate in an open and transparent manner, consider the views of stakeholders as appropriate, act based on sound science, and follow the laws as established by Congress, including the Civil Rights Act. If confirmed, I would work to faithfully execute the laws EPA is responsible for administering, in order to protect human health and the environment for all Americans.

16.Illegal solid waste dumping sites where hundreds of thousands of pounds of trash and waste tires harbor disease-carrying vectors and pests such as mosquitoes, which transmit life threatening diseases like dengue, west Nile and zika viruses can be found all over the United States. These dumping sites

AMERICAN OVERSIGHT

disproportionally affect low income and minority communities. What will you do to address this health threat to these communities?

I understand the Resource Conservation and Recovery Act prohibits open dumping, and under this law states have primary responsibility to regulate solid waste disposal. If confirmed, I would expect to be briefed by staff and to hear the views of states and other stakeholders before taking any action consistent with EPA's legal authorities.

17.Monitoring of our coastal waters is critical to ensure the health and safety of its swimmers and bathers. Many coastal communities, especially low-income and minority communities have limited free recreational opportunities other than spending the day at the beach. As EPA administrator will you commit to continuing EPA's BEACHES program, which provides funding for state water quality monitoring programs that ensure healthy and safe recreation?

I am not personally familiar with the BEACHES program, but I would expect, if confirmed, to be briefed by staff about the program. If confirmed, I would work to faithfully execute the laws EPA is responsible for administering, including those authorizing the BEACHES program, in order to protect human health and the environment for all Americans. If confirmed, I would expect EPA to operate in an open and transparent manner, consider the views of stakeholders as appropriate, act based on sound science, and follow the laws as established by Congress.

18.A 2014 study by scientists at Lawrence National Laboratory at Berkeley reported that an estimated 10 % of chemicals used in fracking fluid are known to be toxic to humans and aquatic life. Fracking practices commonly are conducted in fringe low-income and working class communities. Since these toxics are known to leach into waterways how will you ensure this is prevented?

As was affirmed by Congress in drafting the Lautenberg Act, hazard is only one characteristic of risk and simply stating a chemical substance has toxicity does not mean there is exposure. EPA is tasked with carrying out laws as directed by Congress and if I am confirmed, I will use the authorities vested in me to protect drinking water under the Safe Drinking Water Act.

19. Nationally, 13 percent of the population lives within three miles of a Superfund site while in New Jersey, 50 percent of the population lives within three miles—the highest percentage in any state. New Jersey has 113 Superfund sites on the National Priority List—more than any other state. These sites are the most heavily contaminated properties in the country, and are the areas that pose the greatest potential risk to public health and the environment. What is your plan to strengthen the EPA's superfund program?

AMERICAN OVERSIGHT

If confirmed, I would expect to prioritize the cleanup of contaminated land. I would also expect to be briefed by staff and to receive the views of relevant stakeholders on ways to improve the operation of the Superfund program, if confirmed. I also understand the Government Accountability Office and the EPA Inspector General regularly review the operation and activities of the Superfund program and, if confirmed, I would expect to look to their recommendations for additional areas for improvement, if confirmed.

20. If confirmed do you commit to working to include substantial funding for Superfund cleanups in the new administration's request for a large national infrastructure package?

If confirmed, I expect to make cleanup of contaminated sites one of my priorities.

21. In 2003, Arkansas and Oklahoma signed an agreement, the Statement on Joint Principles to take several measures to reduce phosphorus pollution in the Illinois River Watershed. One requirement was for Oklahoma to revise its 0.037 mg/L phosphorus criterion by 2012, which it did. Why, instead of supporting the conclusion of your own state Water Resources Board, did you delay implementation an additional three years by negotiating another agreement to conduct yet another study?

The "Statement of Joint Principles and Actions" did not require Oklahoma to "revise" its criterion, but rather stated that "Oklahoma will reevaluate Oklahoma's .037 mg/l criterion for total phosphorus in Oklahoma's Scenic Rivers by 2012, based on the best scientific information available at that time, and with the full, timely inclusion of officials from the State of Arkansas representing both point and non point source dischargers." As of 2012, which was the final date for the reevaluation to occur, Arkansas maintained its objection that Oklahoma's .037 mg/l criterion was inappropriate, and not based on the best scientific information available at that time. Rather than protract a now decades long dispute that appeared to again be headed towards litigation once again, I instead negotiated an agreement whereby Arkansas agreed to be finally bound to the results of a new study that would use the best scientific information available at the time to determine the appropriate criterion. This agreement avoided the prospect of more litigation, and ultimately resolved the dispute (with Oklahoma getting the stringent standard that it wanted).

22. In your testimony before the Senate Environment and Public Works Committee, you said that the 2003 agreement expired during your term? Where exactly in the agreement do you see any expiration to the agreement?

AMERICAN OVERSIGHT

The "Statement of Joint Principles and Actions" stated that "Oklahoma will reevaluate Oklahoma's .037 mg/l criterion for total phosphorus in Oklahoma's Scenic Rivers by 2012, based on the best scientific information available at that time, and with the full, timely inclusion of officials from the State of Arkansas representing both point and non point source dischargers." As of 2012, which was the final date for the reevaluation to occur, Arkansas maintained its objection that the .037 mg/l criterion was inappropriate, and not based on the best scientific information available at that time. Therefore, the 2013 Agreement was reached with Arkansas whereby it agreed to be bound by the results of a new study that would use the best scientific information available at the time to determine the appropriate criterion.

23. The 2003 agreement says that, "The state of AR and OK, acting through their environmental agencies, will reissue the above-specified cities' NPDES permits on a normal five (5) year resistance cycle, with the understanding that NPDES permits for these point source dischargers to the shared Oklahoma Scenic Rivers Watershed issued in the year 2012 or beyond must include phosphorus limits stringent enough to meet applicable water quality standards."
a. Do you agree that the 2003 agreement places obligations on NPDES permitted facilities in Arkansas beyond 2012?
b. Because Oklahoma reevaluated its criterion in 2012, does this section require that NPDES permits issued in Arkansas have to be stringent enough to meet Oklahoma's .037 mg/L phosphorus water quality standard by 2012 and then beyond 2012?
c. In your testimony before the Environment and Public Works committee, you testified that the agreement was "historic" and OK's phosphorus limit would be implemented for the first time in history on both sides of the river. Do you agree that the .037 mg/L phosphorus criterion was enforceable on both sides of the border under the terms of the 2003 agreement?

Yes. No. No.

24. In the 2013 agreement between Arkansas and Oklahoma, you agreed "not to institute or maintain administrative enforcement actions, judicial proceedings or take regulatory actions contrary to this second statement."
a. Why did you agree to suspend your enforcement authority?
b. How many enforcement actions did you suspend?
c. Do you interpret "judicial proceedings" to include any judgment in the pending case your predecessor brought against 14 poultry polluters? Was this agreement intended to suspend enforcement of any judicial resolution of that case?

I did not agree to suspend enforcement authority. The Agreement simply acknowledged that neither state would take actions that would violate the terms of the agreement. I do not know if any enforcement proceedings were suspended, as my office is not the entity that would be involved in such

AMERICAN OVERSIGHT

actions. I do not interpret "judicial proceedings" in that manner, and the agreement was not so intended.

25. In 2013, you negotiated an agreement with Arkansas that allowed those municipal dischargers to continue discharging at 1 mg/l phosphorus, agreed to remove the 2012 deadline for complying with Oklahoma's phosphorus standard, and agreed to reopen Oklahoma's phosphorus water quality standard. Since Arkansas had already agreed, in 2003, to ensure that its large municipal dischargers would fully comply with Oklahoma's phosphorus standard starting in 2012, why did you let them out of that agreement in 2013? Please identify any provision of your 2013 agreement that requires these dischargers to meet Oklahoma's phosphorus standards after February 20, 2016.
a. Since the U.S. EPA approved Oklahoma's Phosphorus Standard in 2003, what legal basis do you think Arkansas had to file a lawsuit challenging since the time for filing a legal challenge had expired? If you do not believe the time for filing a legal challenge had expired, please explain the basis for your belief.
b. Do you agree that Arkansas is required to ensure that its point source discharge permits comply with all Oklahoma water quality standards that have been approved by the U.S. EPA under the case of Arkansas v. Oklahoma, including the phosphorus standard approved in 2003? Please state the basis for your belief.
c. The Joint Study Committee authorized by your 2013 agreement recommended a standard different from Oklahoma's existing phosphorus water quality standard. Please explain whether this recommended standard will supplant Oklahoma's current water quality standard, and why you have state that the study confirmed Oklahoma's existing 30-day geometric mean 0.037 mg/l phosphorus standard. What is your understanding of the impact of excluding samples taken during conditions where surface runoff is the dominant influence of total flow and stream ecosystem processes?

The 2013 Agreement did not "let anyone out" of the 2003 Agreement. Arkansas believed that it had legal recourse to resist a criterion to which it objected. Without that additional context as to the claims to which you refer, I am unable to answer your question relating to time bar of Arkansas' hypothetical claims. With regard to Arkansas's obligations, pursuant to the 2013 Agreement, Arkansas is now obligated to adopt and implement a stringent phosphorus standard. The study "used a weight of evidence approach to recommend a six-month average total phosphorus level of not to exceed 0.035 milligrams per liter based on water samples collected during critical conditions was necessary[.]" As I've stated, this confirmed that Oklahoma's 0.037mg/l standard was--despite Arkansas's arguments that it was unnecessarily stringent--necessary to protect the watershed. I am not familiar with the "the impact of excluding samples taken during conditions where surface runoff is the dominant influence of total flow and stream ecosystem processes," to which you refer, and thus cannot offer an opinion on that statement.

AMERICAN OVERSIGHT

26. You stated in your EPW Questionnaire that you negotiated an agreement with Arkansas to reduce phosphorus pollution in the Illinois River watershed that was occurring as a result of poultry growers. Please explain how the agreement reduces pollution from poultry growers.

Runoff from poultry farms contribute to increased phosphorous levels in the Illinois River. The agreement imposed on Arkansas the requirement that it adopt a stringent phosphorous standard, which will necessarily require Arkansas to stringently regulate sources of phosphorous, such as poultry farms, in order to meet that standard.

27. You stated that Oklahoma's phosphorus standard was not being enforced on the Arkansas side of the border prior to your 2013 Agreement. Are you aware that, in April of 2009, the EPA required the Arkansas Department of Environmental Quality to ensure that the discharge permit for the Northwest Arkansas Conservation Authority include an enforceable final effluent limitation for phosphorus stringent enough to meet Oklahoma's phosphorus water standard by June 30, 2012, and that the final NPDES permit for Northwest Arkansas Conservation Authority issued by Arkansas included that requirement? Given the fact that Oklahoma's phosphorus standard was being enforced in Arkansas prior to your 2013 agreement, please explain the benefit to Oklahoma from entering into the agreement.

However, upon reviewing it, I note that Arkansas reserved the right to revise the 0.1 mg/l phosphorus permit limit ("The Department reserves the right to revise the permit limit of 0.1 mg/l for Total Phosphorus upon submission of data which indicates that a Total Phosphorus limit other than 0.1 mg/l is appropriate"). Further, I am aware that Arkansas continued to dispute the validity of Oklahoma's t0.037 mg/ limit, a dispute that is now resolved with Arkansas agreeing that 0.037 mg/l phosphorus standard is appropriate. That agreement greatly benefits Oklahoma.

28. It appears that the last call or meeting that EPA has on the long delayed TMDL for the Illinois River and Lake Tenkiller watersheds occurred on November 14, 2013. Please explain how your 2013 Agreement is related to the TMDL or cleanup of Lake Tenkiller. What steps have you taken with the U.S. EPA to encourage completion of the Illinois River and Lake Tenkiller TMDLs and oppose further delay?

I would certainly encourage the EPA to fulfill any obligations it might have to complete those TMDLs, but I have not taken any legal actions to force the EPA to do so.

AMERICAN OVERSIGHT

29. What steps have you taken to implement and enforce the 0.037 mg/L criterion for phosphorus pollution just approved by the Scenic Rivers Joint Commission in Oklahoma? What measures has Arkansas agreed to in light of the study results?

I have not personally taken any steps to implement or enforce that water quality standard, because the authority to do so is vested in Oklahoma's environmental regulators, such as the Oklahoma Department of Environmental Quality, and Oklahoma Water Resources Board.

30. In 1992 the US Supreme Court in Arkansas v Oklahoma, 503 U.S. 91 (1992), resolved a lawsuit between Oklahoma and Arkansas related to water pollution in the Illinois River and held that upriver states must comply with water quality standards that are adopted by downriver states and approved by EPA. After that Supreme Court decision, effective July 1, 2002, Oklahoma adopted a nutrient criterion for total phosphorous of .037 mg/l for all Oklahoma water bodies designated as Scenic Rivers, codified at Oklahoma Administrative Code 785:45-5-19(c)(2). This new water quality standard had a ten year phase in period before full compliance was required on June 30, 2012. EPA approved Oklahoma's .037 mg/l phosphorous standard, as codified at Oklahoma Administrative Code 785:45-5-19(c)(2), on December 29, 2003.

a. Given this history, do you agree that as of July 1, 2012 Oklahoma's .037 mg/l phosphorous standard was in effect and was binding on upriver states such as Arkansas?

b. More specifically, do you agree that as of July 1, 2012 compliance with Oklahoma's .037 mg/l phosphorous standard was required for the portion of the Illinois River in Arkansas?

c. If you do not agree that as of July 1, 2012 compliance with Oklahoma's .037 mg/l phosphorous standard was required for the portion of the Illinois River in Arkansas, please explain the legal basis for your disagreement.

Oklahoma water quality standards do not automatically apply to upstream dischargers in other states. In 1992, in Arkansas v. Oklahoma, a case that pre-dated Arkansas' authorization to carry out its own Clean Water Act permitting program, the Supreme Court held that it was in EPA's discretion to issue a permit for a publicly owned treatment plant in Fayetteville, Arkansas that required compliance with downstream (Oklahoma) water quality standards. The Court took no position regarding when the Clean Water Act compelled such compliance, only that it was reasonable for EPA to assume that a section 401 water quality certification applied to federally issued NPDES permits. Please note that section 401 applies only to federal permits and as such would not apply to an Arkansas permit now that Arkansas is an authorized state. Under 40 CFR 131.10 state water quality standards are supposed to ensure "attainment and maintenance" of standards applicable to downstream states, but EPA is the arbiter of that when it approves state standards. Under section 402(b) of the Clean Water Act a state that is downstream of an authorized state gets notice of permits

AMERICAN OVERSIGHT

and the opportunity to file recommendations, but has no veto authority. Under section 402(d) of the CWA, EPA has the authority to review state issued permits and impose additional conditions. Interpreting this section, in International Paper Co. v. Ouellette, 479 U.S. 481, 493, 490-91 (1987) , the Supreme Court found that the only law applicable to a point source in an authorized state is the law of the source state. A downstream state is subordinate to a source state and its only recourse it to ask EPA to veto or condition a permit.

31. Please identify any investigations and/or lawsuits the Office of Attorney General initiated after January 17, 2011 to address groundwater contamination associated with swine animal feeding operations and any publicly available data in your possession regarding levels of groundwater contamination at any swine animal feeding operations, as well as any communications that the Office of Attorney General has had with the owners or operators of swine animal feeding operations after January 17, 2011.

The Oklahoma Department of Agriculture regulates Concentrated Animal Feeding Operations (CAFOs) and swine operations generally under the Oklahoma Agriculture and Environmental codes. The Oklahoma Department of Agriculture and the Oklahoma Office of the Attorney General already had several large swine feeding operations under Consent Decree or Settlement Agreement by the time I took office in 2011. (Hanor Roberts & Seaboard Foods, for example) The terms of those Consent Decrees and Settlement Agreements required the swine operations to make regular reports to the Department of Agriculture and the Office of the Attorney General. These reports included monitoring well data, lagoon data and other terms to be carried out by the operators pursuant to the agreements. My office has continued to monitor these operations to confirm compliance with the Consent Decree and Settlement Agreements.

AMERICAN OVERSIGHT

Senator Cardin:

1. Please provide your definition of EPA's "activist agenda" as stated on your professional biography on the State of Oklahoma's official website. Please provide a list of all environmental laws and regulations that you consider to comprise the federal agency's "activist agenda" and how each environmental law or regulation listed in response to this question meets this definition.

I firmly believe that the EPA has a vital role, but it must do so within the bounds of its legal authority. The actions undertaken by the Office of Attorney General have been out of concern that EPA had exceeded its legal authority in those specific actions, not out of animosity toward the mission of the Agency or any specific regulation or statute. Regulations that are not on solid legal foundation and that cannot survive judicial review will not result in environmental protections.

2. For what purpose other than to handle the State of Oklahoma's legal challenges against the EPA did you create the Federalism Unit and defund the Environmental Protection Unit?

The Federalism Unit within the Attorney General's Office serves to protect the State of Oklahoma's sovereign interests in our republican form of government, with a particular focus on issues related to the vertical and horizontal separation of powers demanded by our Constitution. It is headed by the Solicitor General. With regard to the environmental protection unit, it is misleading to say that it was "defunded." Consistent with the practice of every Attorney General save one, I determined that a standalone unit was operationally inefficient. I opted to combine the Environmental Protection Unit and the Consumer Protection Unit into a single unit called the "Public Protection Unit." The Public Protection Unit continued the work of the Environmental Protection Unit, and that work continues to this day, headed by the very same attorney who worked in the Environmental Protection Unit under the prior Attorney General.

3. Do you intend to create a Federalism Unit within the EPA similar to Oklahoma's? Explain why or why not.

My understanding is that the Department of Justice, working in coordination with the EPA Office of General Counsel, represents EPA in litigation, and would thus serve to protect such federalism related interests.

AMERICAN OVERSIGHT

4.Would you support budget cuts to the EPA in similar scope (10% or higher) to those made to Oklahoma Department of Environmental Quality appropriations since FY2009[1]?

I am not familiar with Oklahoma Department of Environmental Quality's budget. I have no first-hand knowledge of EPA's development of its FY 2018 budget request. If confirmed, I look forward to working with EPA's budget staff and program offices and officials with the Office of Management and Budget on EPA's request. I will work to ensure that the limited resources appropriated to EPA by Congress are managed wisely in pursuit of that important mission and in accordance with all applicable legal authorities.

5.Of the lawsuits filed against the EPA in which you participated personally and substantially as Attorney General for Oklahoma, do you intend to recuse yourself from decision making regarding litigation in which you represented the State of Oklahoma as an adversarial party? Do you intend to recuse yourself for the entirety of each case?

As a lawyer, I am bound by the rules of professional conduct not to "switch sides" in any litigation in which I represented the State of Oklahoma, unless my former client gives its informed consent.

6.Do you believe the State of Oklahoma and the EPA should be regarded as the same or different "clients" for conflicts of interest purposes? Explain why or why not.

The State of Oklahoma and the federal government are separate sovereign authorities; representing one does not entail representing the other. In addition, while the State of Oklahoma has been my client as a lawyer during my service as Attorney General, if confirmed as EPA Administrator I will not be acting as a lawyer with clients.

7.The American Bar Association (ABA) Model Rules of Professional Conduct, Rule 1.1, Special Conflicts Of Interest for Former and Current Government Officers and Employees, Comment 5 discusses the balancing of interests. On the one hand, where the successive clients are a government agency and another client, public or private, the risk exists that power or discretion vested in that agency might be used for the special benefit of the other client. A lawyer should not be in a position where benefit to the other client might affect performance of the lawyer's professional functions on behalf of the government. Also, unfair advantage could accrue to the other client by reason of access to confidential government information about the client's adversary obtainable only through the lawyer's government service. In the spirit of Rule 1.11, what previous lawsuits

[1] http://okpolicy.org/wp-content/uploads/2016_Budget_Highlights.pdf?997616#page=7&x42044

AMERICAN OVERSIGHT

might affect your performance of the Administrator's professional functions on behalf of the EPA?

Because I will follow the guidance of ethics officials and my own professional responsibilities in determining whether and how to participate in a particular matter, I do not expect any previous lawsuits to adversely affect my performance as EPA Administrator if confirmed.

8. On the other hand, the rules governing lawyers presently or formerly employed by a government agency should not be so restrictive as to inhibit transfer of employment to and from the government. The government has a legitimate need to attract qualified lawyers as well as to maintain high ethical standards. Thus a former government lawyer is disqualified only from particular matters in which the lawyer participated personally and substantially. The provisions for screening and waiver in paragraph (b) are necessary to prevent the disqualification rule from imposing too severe a deterrent against entering public service. The limitation of disqualification in paragraphs (a)(2) and (d)(2) to matters involving a specific party or parties, rather than extending disqualification to all substantive issues on which the lawyer worked, serves a similar function. Please provide a list of federal lawsuits filed against the EPA in which you participated personally and substantially as Attorney General for Oklahoma.

As Attorney General of Oklahoma, I have participated personally and substantially in the following suits against the EPA:

- **EME Homer City Generation v. EPA, No. 12-1182 (U.S.S.C.)**
- **Michigan v. EPA, No. 14-46 (U.S.S.C.)**
- **Murray Energy Corp. v. EPA, Nos. 14-1112, 14-1151 (D.C. Cir.)**
- **Murray Energy Corp. v. EPA, Nos. 15-1385, 15-1392, 15-1490, 15-1491 & 15-1494 (D.C. Cir.)**
- **Oklahoma v. EPA, Nos.12–9526, 12–9527 (10th Cir.)**
- **Oklahoma ex rel. Pruitt v. EPA, No. 16-5038 (10th Cir.).**
- **Oklahoma ex rel. Pruitt v. McCarthy, No. 15-cv-369 (N.D. Okla.).**
- **Oklahoma v EPA, No, 13-cv-00726 (W.D. Okla.)**
- **West Virginia v. EPA, No. 14-1146 (D.C. Cir.)**
- **West Virginia v. EPA, No. 16-1264 (D.C. Cir.)**

9. Do you accept a screen is appropriate for EPA strategic decisions specific to those lawsuits in which you represented an adversarial party? Explain why or why not.

I will consult with relevant ethics officials and review relevant rules of professional conduct to determine whether a screen is appropriate in a particular matter.

10. Comment 5 discusses a lawyer who moves between different government entities. When a lawyer has been employed by one government agency and then

AMERICAN OVERSIGHT

moves to a second government agency, it may be appropriate to treat that second agency as another client for purposes of this Rule, as when a lawyer is employed by a city and subsequently is employed by a federal agency. However, because the conflict of interest is governed by paragraph (d), the latter agency is not required to screen the lawyer as paragraph (b) requires a law firm to do. The question of whether two government agencies should be regarded as the same or different clients for conflict of interest purposes is beyond the scope of these Rules. Do you believe two government agencies—the State of Oklahoma and the EPA—should be regarded as the same or different "clients" for conflicts of interest purposes? Explain why or why not.

As explained above, the State of Oklahoma and the federal government are separate sovereign authorities. While the State of Oklahoma was my client as a lawyer, if confirmed as EPA Administrator I will not be acting as a lawyer with clients.

11.How might the spirit of Rule 1.11's conflicts of interest provisions apply if those government entities were adversarial parties to a lawsuit?

If two government entities are adversarial parties to a lawsuit, then under ABA Model Rule 1.11 a lawyer's previous representation of one entity in the litigation will preclude his later representation of the other entity in the same litigation, unless the former client gives its informed consent. As explained above, if confirmed as EPA Administrator I will not be acting as a lawyer with clients.

12.ABA Rule 1.7 Conflict Of Interest: Current Clients provides that a "lawyer shall not represent a client if the representation involves a concurrent conflict of interest. A concurrent conflict of interest exists if the representation of one client will be directly adverse to another client; or there is a significant risk that the representation of one or more clients will be materially limited by the lawyer's responsibilities to another client, a former client or a third person or by a personal interest of the lawyer." In the spirit of Rule 1.7, do you reasonably believe that you will be able to provide competent and diligent leadership to the EPA, an agency you "don't like" and have sued several times? Explain why or why not.

I will provide diligent and competent leadership to the EPA if confirmed as Administrator. As I explained in my testimony to the Committee, I am a firm believer in the EPA's mission to protect the environment and look forward to the opportunity to lead the agency to help provide our future generations with a better and healthier environment.

13.Please explain how your litigation position in each case is or is not at odds with the mission of the EPA, to protect human health protect human health and the environment—air, water, and land.

AMERICAN OVERSIGHT

The EPA's mission is defined by the laws passed by Congress granting it the authority to act. Any action by the EPA that exceeds the authority granted to it by Congress, by definition, cannot be consistent with the Agency's mission. In each case filed against the EPA, in the view of the State of Oklahoma, the EPA had acted in excess of the authority granted to it by Congress.

14.Do you accept that EPA, state, local and tribal agencies work together to ensure compliance with environmental laws passed by Congress, state legislatures and tribal governments?

I agree it is essential for the federal government, state governments, and tribal governments to work together to provide the environmental protection that our laws demand and that the American people deserve. As I explained in my testimony to the Committee, I strongly support cooperative federalism. If confirmed, I will make every effort to partner with the EPA's counterparts in state, local, and tribal governments to further these goals.

15.In 2005, former Attorney General Drew Edmondson filed a federal lawsuit in 2005 seeking to prohibit the spreading of chicken waste over land in the Illinois River Basin in northeastern Oklahoma. Companies named in *State of Oklahoma v. Tyson Foods Inc.* (No. 4:05-cv-00329) include Tyson Foods Inc., Tyson Poultry Inc., Tyson Chicken Inc., Cobb-Vantress Inc., Cal-Maine Foods Inc., Cargill Inc., Cargill Turkey Production L.L.C., George's Inc., George's Farms Inc., Peterson Farms Inc., Simmons Foods Inc., Cal-Maine Farms Inc. and Willow Brook Foods Inc. On December 9, 2015, the State of Oklahoma filed brief amici curiae along with 21 other states in support of the petitioners in *American Farm Bureau Federation v. EPA* (No. 15-599). The *Tyson Foods* defendants did not participate in the Bay TMDL lawsuit, and the American Farm Bureau was not a party to the Oklahoma suit. However, Tyson Foods Inc., headquartered in Springdale, Arkansas—the largest poultry producing company in the world—is a member of the Arkansas Farm Bureau. Do you accept that the American Farm Bureau, a national organization, represents the interests of the Arkansas Farm Bureau and its members, including Tyson Foods? Explain why or why not.

It is my understanding that the American Farm Bureau Federation is a distinct corporate entity from the Arkansas Farm Bureau, which is a distinct corporate entity from Tyson Foods. Accordingly, I do not believe one can ignore corporate form and conflate the American Farm Bureau Federation with either the Arkansas Farm Bureau or Tyson Foods. I observe that the Pennsylvania Farm Bureau filed suit against EPA in the challenge to the Chesapeake Bay TMDL on its own behalf, notwithstanding the fact that American Farm Bureau Federation also was a plaintiff.

16.In 2013, despite the lack of a verdict in the *Tyson Foods* case, you added the State of Oklahoma to the American Farm Bureau/poultry industry backed lawsuit

AMERICAN OVERSIGHT

against the EPA's efforts to enforce a TMDL to restore water quality in the Chesapeake Bay. You sided with the American Farm Bureau, the Fertilizer Institute, the National Chicken Council, the National Pork Producers Council and other farming interests. The lawsuit claimed EPA was exceeding its authority in enforcing "total maximum daily load," or TMDL, standards in Chesapeake Bay, limitations on nitrogen, phosphorus and sediments. In what ways did you balance the interests of your client, the State of Oklahoma, as Counsel for Amicus Curiae in *American Farm Bureau* while *Tyson Foods*, in which you represented the State of Oklahoma as Plaintiff, was ongoing?

These are two different lawsuits regarding different parties and different matters. There also is no issue conflict because the issues raised in the two lawsuits also are distinct.

17.In 2016, more than six years after arguments concluded in *Tyson Foods*, there has been no final ruling from U.S. District Court Judge Gregory K. Frizzell. Do you find the six-year delay in *Tyson Foods* to be acceptable or reasonable, and if so, why?

It would not be appropriate for me as an attorney to comment on the acceptableness or reasonableness of the actions of a judge before whom the Office of the Attorney General has a pending case.

18.Please provide a list of all confidential government documents related to the Chesapeake Bay TMDL to which you would not have access but for your status as counsel to the State of Oklahoma as amicus curiae in *American Farm Bureau*.

I am not aware of any such documents. A request for such documents can be made to the Office of the Attorney General pursuant to the Oklahoma Open Records Act.

19.If the Supreme Court were to grant certiorari in *American Farm Bureau*, or a case like it challenging the Chesapeake Bay TMDL, how would you direct the EPA as Administrator to rigorously defend its own rule?

Any TMDL should be a cooperative effort. If confirmed as EPA Administrator and if the litigation challenging the Chesapeake Bay TMDL reached the Supreme Court during my time in office, I would expect to consult with the States and other interested stakeholders about the issues raised in such litigation.

20.In what ways did you balance the interests of your client, the State of Oklahoma, as Amicus Curiae in *American Farm Bureau* and as Plaintiff in *Tyson Foods*?

AMERICAN OVERSIGHT

These are two different lawsuits regarding different parties and different matters. As Attorney General of Oklahoma, I represent the interests of the State of Oklahoma when I seek to ensure that federal law is followed such that Oklahoma retains its sovereign authority to regulate where federal law allows such state regulation..

21.Do you accept that the Chesapeake Bay TMDL could still fail to significantly reduce pollution flowing to the Chesapeake Bay if the EPA steps back from its role in holding states accountable for their cleanup commitments? Explain why or why not.

It is my understanding that recent quality data shows that the water quality of the Chesapeake Bay is improving. Further, it is my understanding that the United States Geological Survey and other researchers have found that the time lag between measures taken on the ground and water quality response can be years, decades or even longer. Accordingly, today's improvements in water quality are likely the result of measures taken before the effective date of the Bay TMDL. These measures, as well as state plans to require treatment plants upgrades that also pre-date the effective date of the Bay TMDL, will continue to improve water quality. That said, the Bay TMDL represents a cooperative effort of all states in the watershed and EPA has a role in overseeing its implementation.

22.The TMDL approach hinges on numeric water quality standards that set a qualitative number for pollution limits, rather than a qualitative description of how healthy waters should be. As Administrator, how would you promote effective numeric standards?

I agree with the Mach 2011 nutrient framework issued by the Assistant Administrator for the Office of Water entitled "Working in Partnership with States to Address Phosphorus and Nitrogen Pollution through Use of a Framework for State Nutrient Reductions," which prioritizes state action to encourage on the ground activities over establishment of numeric nutrient limits. According to the State of Florida, based on their experience with the imposition of federal numeric nutrient limits, controversy over the validity of a number can actually delay pollutant reduction activities, delaying water quality improvements.

23.In the Mississippi River watershed, the Obama Administration defended a lawsuit against the EPA from environmentalists seeking numeric nutrient criteria. The United States District Court for the Eastern District of Louisiana ruled in favor of the EPA, finding “Presumably, there is a point in time at which the agency will have abused its great discretion by refusing to concede that the current approach […] is simply not going to work.” But for now, “EPA is entitled to judgment as a

AMERICAN OVERSIGHT

matter of law in its favor." As Administrator, would you continue to waste resources on a qualitative, voluntary approach?

I was not involved in the litigation your reference, and am not familiar with the details of the case.

24.As Administrator, do you intend to make enforcement of the Chesapeake Bay cleanup plan a priority? How? Do you acknowledge that it will be even more difficult to make progress without EPA?

The Chesapeake Bay TMDL has been upheld by the Third Circuit Court of Appeals. If confirmed, I will continue to enforce the law and will continue EPA's leadership role as a member of the Chesapeake Bay Executive Council. I agree that progress would be difficult without a collaborative process.

25.Would you deny the political will in the states of the Chesapeake Bay watershed to protect the Bay?

I would listen to the views of all interested stakeholders including the States.

26.In a 2013 speech, you said "There are issues with respect to clean water and air that cross state lines. There is a role, and I think it's important for conservatives, for us to recognize, that though I don't like the EPA […] I think it's not good for us to say that the EPA doesn't have any role." How would you characterize the EPA's role in mediating cross-state air and water pollution disputes?

I certainly agree that EPA plays a leadership role in mediating cross-state air and water pollution disputes.

27.In 1992, the Supreme Court held in *Arkansas v. Oklahoma* (No. 90-1262), a case challenging the EPA's issuance of a National Pollution Discharge Elimination System (NPDES) permit to a publicly owned treatment plant in Fayetteville, Arkansas for a discharge into a river flowing into Oklahoma, that the Clean Water Act authorizes the EPA to require that point sources in upstream states not violate water quality standards in downstream states.[2] Is the EPA interpreting this Supreme Court precedent correctly? If not, how would you change its interpretation through NPDES?

[2] https://www.epa.gov/sites/production/files/2015-01/documents/waterpollution-ludwiszewski-memo.pdf

AMERICAN OVERSIGHT

Arkansas v. Oklahoma involved an EPA-issued permit because at the time of the litigation the Fayetteville wastewater treatment plant began operation Arkansas did not have an approved state permitting program. Oklahoma is authorized to implement its own NPDES permitting program, in lieu of the federal program. As such, I am not familiar with how EPA is applying Arkansas v. Oklahoma when it issues permits in the handful of states without such approved permitting programs.

28.After the *Arkansas* decision, you agreed to a three-year delay in 2012 to allow for an independent study of the science behind the standard. What specific factors motivated your decision to delay enforcement of Oklahoma's standard?

The "Second Statement of Joint Principles and Actions" that Oklahoma entered into with Arkansas in 2012 actually required that "[t]he States, through the appropriate Parties, will continue to require existing point source dischargers to the Illinois River Watershed with a design capacity of greater than 1 MGD to operate under existing National Pollutant Discharge Elimination System ("NPDES") permits reflecting an effluent limit for total phosphorus of not more than I mg/L based upon a 30 day average, assuming the U.S. Environmental Protection Agency does not object" and likewise required that "Parties for both States will continue cooperative efforts to improve and protect water quality in the Scenic Rivers."

29.Please provide all communications you had had with representatives of agricultural and other companies regarding water quality litigation between Arkansas and Oklahoma.

Such communications can be requested from the Oklahoma Office of the Attorney General through a request made to that office pursuant to the Oklahoma Open Records Act.

30.Do you commit to fully apply and enforce the Good Neighbor provision if confirmed as EPA Administrator?

Yes. If I am confirmed as Administrator, I will exercise my authority in this area consistent with Congress's intent in enacting the Act. Specifically with respect to Section 110(a)(2)(D) and the "good neighbor" obligations of Section 110, I intend to engage in a transparent process that will allow states to have a meaningful opportunity to understand their obligations with regard to reducing emissions that cause or contribute to nonattainment or interference with maintenance in other states through the SIP process and to act consistent with my authority under Section 110(c) if states fail to do so.

31.What is your understanding of the role of climate change in algal blooms?

AMERICAN OVERSIGHT

EPA identifies the following as causes of harmful algal blooms: sunlight, slow-moving water, and excess nutrients. For climate change to have a role, it would first have to have an impact on one of these three causes.

32.Please provide a list of water treatment plants under consent order from the Oklahoma Department of Environmental Quality during your tenure as Attorney General. Please identity funding sources other than federal funding that are available to bring these treatment plants into compliance with the Clean Water Act.

This question should be directed to the Oklahoma Department of Environmental Quality, as I have no personal knowledge of such matters.

33.Of the 1,677 public water supplies under the purview of the Oklahoma Department of Environmental Quality, 19 had recent elevated detections of lead in March, 2016. Please describe any action you took to address lead contamination as Attorney General.

As the question indicates, the Oklahoma Department of Environmental Quality as opposed to the Office of Attorney General has primary responsibility for implementing and enforcing environmental laws in Oklahoma.

34.When more than 10 percent of tap water samples in a local system contain lead levels of at least 15 parts per billion, the state steps in to review the water system's treatment for corrosive properties and update the sampling schedule as necessary. How have budget cuts to the Oklahoma Department of Environmental Quality impacted sampling?

I have no personal knowledge of the Oklahoma Department of Environmental Quality's budget, or how any budget cuts may have impacted that office.

35.EPA and the Centers for Disease Control and Prevention (CDC) agree that there is no known safe level of lead in a child's blood. Lead is harmful to health, especially for children. Do you accept that there is no safe level of lead in a child's blood?

I am concerned about the health of children. I have not myself reviewed the scientific studies correlating blood lead levels to impacts in children. However, it is my understanding that neither EPA nor CDC have identified a "safe" level of exposure, but instead have adopted levels appropriate for action under their specific statutory authorities.

AMERICAN OVERSIGHT

36.Please provide any information relating to enforcement actions for Lead and Copper Rule violations undertaken during your tenure as Attorney General for Oklahoma.

Such enforcement actions would have been undertaken by Oklahoma's environmental and water regulators, at agencies like the Oklahoma Department of Environmental Quality or the Oklahoma Water Resources Board. This question should be directed to those agencies so that can describe to you the relevant actions taken by the State of Oklahoma.

37.The Safe Drinking Water Act (SDWA) requires EPA to establish and enforce standards that public drinking water systems must follow. EPA delegates primary enforcement responsibility (also called primacy) for public water systems to states and tribes if they meet certain requirements. In a letter to Oklahoma Secretary of the Environment Gary Sherrer, EPA Regional Administer Ron Curry said the State had until June 1, 2013 to fully implement the Stage 1 and Stage 2 Disinfectants and Disinfection Byproducts Rules. Please provide all information related to Oklahoma's primacy under the Public Water System Supervision Program during your tenure as Attorney General.

As your question indicates, such matters would be within the purview of Oklahoma's environmental regulators, not the Office of Attorney of General.

38.Do you concur that persistent drinking water safety problems indicate the need to strengthen, not weaken, the federal law designed to ensure the safety of Americans' drinking water? Explain why or why not.

I believe that persistent drinking water problems largely stem from a failure to comply with current laws and regulations. If confirmed, I will work to increase compliance with the law, which will require effective enforcement and oversight, technical assistance, and infrastructure improvements. It also may require changes to existing regulations to improve oversight tools and eliminate ambiguities that lead to compliance issues.

39.At the same time, deteriorated lead paint and elevated levels of lead-contaminated house dust are present in an estimated 24 million U.S. houses, according the Centers for Disease Control and Prevention. The long-term effects that lead poisoning can cause include learning disabilities, hyperactivity, impaired hearing and brain damage. Infants and young children are most susceptible to lead poisoning. EPA's Lead Renovation, Repair and Painting Rule (RRP Rule) requires that firms performing renovation, repair, and painting projects that disturb lead-based paint in homes, child care facilities and pre-schools built before 1978 have their firm certified by EPA (or an EPA authorized State), use certified renovators who are trained by EPA-approved training providers and follow lead-safe work practices. Do you believe the RRP Rule should be a voluntary standard? Explain why or why not.

AMERICAN OVERSIGHT

No. Oklahoma is an authorized state. The Oklahoma Lead-Based Paint Management Act designates the Department of Environmental Quality as the official agency for implementing the Lead-Based Paint Management Program.

40.EPA is addressing lead contamination and resulting hazards under these laws in many ways, including by issuing and enforcing regulations. Do you find this regulatory authority appropriate for EPA, and not the States? Why or why not.

It is appropriate for EPA to faithfully enforce federal law. With respect to the RRP rule, it is my understanding that there have been issues with EPA implementation of the RRP rule in states that are not authorized due to a delays in certifying firms.

41.Title IV of the Toxic Substances Control Act (TSCA), as well as other authorities in the Residential Lead-Based Paint Hazard Reduction Act of 1992, directs EPA to regulate lead-based paint hazards. As Administrator, how would you implement Title IV of TSCA?

Congress enacted both TSCA Title IV to create a national program to achieve the national goal of eliminating lead-based paint hazards from housing as expeditiously as possible and TSCA Title V to authorize the establishment of a state grant program to provide technical assistance on EPA environmental programs for schools and to implement school environmental health programs. If confirmed, I will faithfully discharge my responsibility to protect human health and the environment for all Americans with the highest possible dedication and commitment in accordance with the legal authorities established by Congress.

42.The CWA prohibits anyone from discharging pollutants, including lead, through a point source into a water of the United States unless they have a National Pollutant Discharge Elimination System (NPDES) permit. As part of their water quality standards regulations, states and authorized tribes adopt ambient water quality criteria with sufficient coverage of parameters, such as lead, and of adequate stringency to protect the designated uses of their surface waters. What changes, if any, would you make to the NPDES permit?

I have not contemplated any changes to the NPDES permit program, if confirmed.

43.Please provide all confidential government information regarding the 2010 consent order with the Making Money Having Fun (MMHF, LLC), a coal combustion waste mine fill operator in Bokoshe, Oklahoma, that you obtained as Attorney General.

AMERICAN OVERSIGHT

I did not become Attorney General until January 2011. The Oklahoma Department of Environmental Quality has responsibility for administering and enforcing environmental laws in Oklahoma, along with other agencies like the Water Resources Board and the Corporation Commission. Those agencies may be able to provide you information about the 2010 consent order your reference.

44.The EPA finalized the first federal coal ash disposal rules in 2015, but the rules did not include any direct mechanism to implement or enforce the rules. Now, Congress has provided the mechanism in S. 612-114th, the WINN Act, which was passed with bipartisan support. Senate Majority Leader Mitch McConnell also issued a press release stating his approval of several of the bill's provisions, including the coal ash language. As you may know, if states create a coal ash permitting program, or amend their current programs to incorporate federal standards and get EPA approval, they will be able to implement the rules themselves. If they do not, the EPA is directed either put into place a federal permitting system, or have the authority to directly enforce the requirement. Do you intend to enforce the coal ash language in S. 612-114th, the WINN Act, that received bipartisan report?

If confirmed as Administrator, I will faithfully execute all laws enacted by Congress, including the WIIN Act provisions regarding coal ash.

45.Please provide an explanation of any modification you would make to the coal ash provision in S. 612-114th, the WINN Act.

I have not had occasion to review in depth this new statutory. Congress, not the Administrator of EPA, has authority to modify statutory language such as the coal ash provision in the WIIN Act. I do not at this time have any opinion whether Congress should modify the statute in question.

46.Kentucky is already in the process of working on regulations governing coal ash disposal. The state's proposal would modify the concept of "permit-by-rule," and allow utilities to build their own coal ash landfills or ponds without prior permitting or review by regulators. The utilities could be fined by regulators or sued by individuals for violations. Energy and Environment Cabinet spokesman John Mura has said the Cabinet believes this would qualify as a "permitting program" as required by the WINN Act. As Administrator, would you allow the Kentucky Energy and Environment Cabinet's "permit by rule" program to qualify as a permitting program under the bipartisan WIIN Act? Why or why not?

I am not familiar with how Kentucky regulates coal ash disposal. It would be inappropriate for me to prejudge an issue that may come before me for decision if I am confirmed as Administrator. If the issue comes before me, I will ensure that the issue is fully and fairly considered with input from staff and in accordance with applicable legal requirements.

AMERICAN OVERSIGHT

47.What is the goal of your lawsuit asking to strike down EPA's "Waters of the United States" rule under the CWA? What will the states be empowered to do that they can't do with the rule in place? (be specific)

The goal of the lawsuit I brought to advance the State of Oklahoma's interest in protecting its regulatory authority is to have the courts vacate the WOTUS rule. If the WOTUS rule is vacated, we will return the status quo, and the State of Oklahoma's sovereign authority to regulate waters within its border will not be diminished.

48.The brief filed on behalf of states argues that states need to "protect" waters. Are you aware of the legal concept under the Clean Water Act that provides for states to be more protective than the Clean Water Act, not less—that the Act sets a minimum standard of protection and cleanliness?

The state brief filed in the WOTUS case argues that the WOTUS rule fails to recognize the limits on federal authority that Congress adopted when it enacted the CWA over forty years ago. Under the Act, Congress "chose to 'recognize, preserve, and protect the primary responsibilities and rights of States . . . to plan the development and use . . . of land and water resources.'" Solid Waste Agency of N. Cook Cnty. v. U.S. Army Corps of Eng'rs, 531 U.S. 159, 174 (2001) ("SWANCC") (quoting 33 U.S.C. § 1251(b)). As noted in the state brief: "The Rule likewise reaches and even exceeds the outer bounds of Congress's constitutional authority. The Rule's expansion of federal authority over intrastate waters will "impinge[] o[n] the States' traditional and primary power over land and water use," and "readjust the federal-state balance." SWANCC, 531 U.S. at 174.The Rule's coverage of intermittent waters, ephemeral waters, and isolated sometimes-wet lands "presses the envelope of constitutional validity," Rapanos, 547 U.S. at 738 (Scalia, J., plurality) (citation omitted), far more than the challenged agency actions in Rapanos and SWANCC. That is, states have exclusive, not additional, authority over all land and non-navigable, wholly intrastate waters.

49.Do you believe that states should be free to allow more pollution or fewer waters to be protected from pollution and development than described in the Waters of the United States Rule?

The litigation brought by the states was premised on a concern that EPA had exceeded its statutory authority as established by Congress. Additionally, the WOTUS rule is a jurisdictional rule, not a substantive rule as your question suggests.

AMERICAN OVERSIGHT

50.Are there waters that you believe should not be protected under the Clean Water Act? What specifically are they? Why do you think that the rule covers those waters now? Why do you think they should not be protected?

As I stated in my testimony before the Committee, I believe that the Clean Water Act regulates more than navigable waters. But, it does not regulate all waters. How much more would best be answered by Congress. Absent Congressional action, it is the role of EPA to seek to provide clarity on the scope of federal jurisdiction. What that is has to be determined and assessed through notice and comment rulemaking. The WOTUS rule exceeded the authority granted by Congress by allowing federal regulation of land if rainwater collects on the surface and seeps into the ground or if rainwater runs over the land as ephemeral flows. It also exceeded CWA authority by regulating isolated ponds and wetlands. Such non-navigable, wholly intrastate water should be protected, as appropriate, under state, not federal, law. For example, isolated bodies of water have not been subject to federal regulation since the 2001 Supreme Court decision in SWANCC struck down earlier agency attempts to expand federal jurisdiction beyond the limits of the Act. The WOTUS rule would reverse that decision and regulate the same waters that the Supreme Court has already said are subject to exclusive state regulation.

51.In your lawsuit against the Clean Water Rule you argue against what you perceive as an undue federal intrusion on local control of decisions about water quality. You have also argued that cities in towns in Oklahoma should not be able to control their water quality by issuing local regulations for the activities of oil and gas companies. How is your stance in favor of local control under the Clean Water Act consistent with your position against local control when it comes to the water polluting activities of oil and gas companies? What legal underpinning is there for that difference?

State concerns regarding the WOTUS rule are based on the limitations on federal authority under the Clean Water Act. Oklahoma concerns over the regulation of commercial activities including oil and gas company operations by local governments are based on the limitations of local authority under state law and federal law. Respect for the rule of law underpins both concerns, and both seek to ensure that laws enacted by the relevant legislatures—Congress on one hand, the Oklahoma Legislature on the other—are followed.

52.Wetland ecosystems provide significant environmental and economic benefits to American citizens including water purification, flood and erosion control, and

AMERICAN OVERSIGHT

habitat for wildlife and commercial fish species. In fact, over fifty percent of commercial fish and shellfish stocks in the Southeastern United States rely on coastal wetlands. Section 404 of the Clean Water Act protects wetland ecosystems by regulating the discharge of dredging and fill material. If confirmed, what is your plan to improve the biological condition of wetlands?

If confirmed, I will take care to faithfully execute all environmental laws enacted by Congress, including Section 404 of the Clean Water Act.

53.As of 2014 Oklahoma had nearly 14,000 miles of rivers and nearly 1,000 square miles of lakes that are so polluted they don't meet the state's water quality standards. That's approximately 42% of all the delineated stream miles in Oklahoma, and almost 1,600 of those were added during your time as Attorney General. Only 107 miles of rivers in Oklahoma – about a third of one percent – were classified as meeting Oklahoma's water quality standards. The other 58% are classified as having insufficient data to enable the state to say they're meeting state standards. As Oklahoma's Attorney General, what did your office do to ensure that the companies were complying with the state's clean water laws?

The Oklahoma Department of Environmental Quality and the Oklahoma Water Resources Board have primary responsibility for implementing and enforcing environmental laws in Oklahoma. Such questions should be directed to those environmental regulators.

54.How many water pollution enforcement actions did your office file, and how many of those resulted in orders to halt or reduce pollution discharges? Please provide a comprehensive list.

The Oklahoma Department of Environmental Quality and the Oklahoma Water Resources Board have primary responsibility for implementing and enforcing environmental laws in Oklahoma. Those agencies are thus best situated to provide a comprehensive list of enforcement actions take by the State of Oklahoma. The Office of Attorney General has on occasion assisted those environmental regulators by providing legal representation in cases under the CWA for pollution to groundwater, streams and other waterways. Other cases included pollution that caused fish kills and CERCLA Superfund sites that damaged Oklahoma groundwater and or streams. Those cases are EPA, States of Oklahoma & Texas v Mahard Egg Farm; EPA, State of Oklahoma v. Doe Run Mining et al.; ODWC v. Kent Feeds; ODWC v. Southern Towing; State Of Oklahoma, ODWC v Kelco Manufacturing; and State of Oklahoma & Cherokee Nation v. Sequoyah Fuels Corp.

55.President Reagan's EPA adopted the "Stream Buffer Zone" rule to protect streams, and the Obama administration has replaced that rule with the "Stream Protection Rule." Do you think Reagan's rule was a more straightforward way to

AMERICAN OVERSIGHT

protect streams? Why or why not? What specifically about it was more "straightforward?"

The stream buffer zone rule and stream protection rule are not EPA rules. They were issued by the Office of Surface Mining Reclamation and Enforcement of the Department of the Interior.

56.The American Society of Civil Engineers states that decrepit, decades-old municipal wastewater systems are at fault for the discharge of 900 billion gallons of untreated sewage and wastewater into U.S. waterways each year, enough to cover New York City under a layer 127 feet deep. According to a New York Times report, municipal sewer systems are the nation's biggest violators of the U.S. Clean Water Act, and more than one-third of them have violated pollution laws at least once since 2006. This worn-out, faulty infrastructure requires new investments in order to protect public health and the environment. As the leader of the Agency in charge of protecting human health and US waterways, how will you help states and municipalities modernize their wastewater infrastructure?

If confirmed, I will continue support for the Clean Water State Revolving Loan Funds and the new Water Infrastructure Financing Innovation Act loan program. In addition, I would continue to implement EPA's Integrated Planning Framework to provide municipalities with flexibility to prioritize actions they take to come into compliance.

57.The American Society of Civil Engineers states that decrepit, decades-old municipal wastewater systems are at fault for the discharge of 900 billion gallons of untreated sewage and wastewater into U.S. waterways each year, enough to cover New York City under a layer 127 feet deep. According to a New York Times report, municipal sewer systems are the nation's biggest violators of the U.S. Clean Water Act, and more than one-third of them have violated pollution laws at least once since 2006. This worn-out, faulty infrastructure requires new investments in order to protect public health and the environment. As the leader of the Agency in charge of protecting human health and US waterways, how will you help states and municipalities modernize their wastewater infrastructure?

If confirmed, I will continue support for the Clean Water State Revolving Loan Funds and the new Water Infrastructure Financing Innovation Act loan program. In addition, I would continue to implement EPA's Integrated Planning Framework to provide municipalities with flexibility to prioritize actions they take to come into compliance.

58.Given the President-elect's concerns about EPA's slow and inadequate response to lead in drinking water problems and the lack of adequate testing, what specifically would you do to prevent a Flint-like disaster from happening elsewhere?

AMERICAN OVERSIGHT

If confirmed, I will focus EPA's resources and attention on its core missions, including ensuring safe drinking water.

59.Would you commit to undertaking stronger EPA oversight and enforcement of drinking water rules, such as stronger enforcement of the lead and copper rule that wasn't enforced in Flint, MI?

Yes.

60.What specific lessons did you draw from the Flint, MI tragedy, regarding EPA's proper role in overseeing the States' administration of delegated federal programs?

I believe that EPA staff should be encouraged to notify their managers when they identify issues and managers must take those issues seriously when brought to their attention. I agree with the assessments of others that the Flint tragedy was a failure at every level of government, but I am particularly disturbed that EPA did not take action until long after they became aware of the elevated lead levels in Flint drinking water.

61.What are your views on when EPA should step in to take enforcement or emergency action where a state is authorized to administer a program under one of the federal environmental laws but is failing its duty to protect the public?

If confirmed, I will follow the process outlined in section 1414 of the Safe Drinking Water Act, as recently amended in section 2106 of the WIIN Act, to notify persons of elevated lead levels in their drinking water and will carry out the recommendations of the EPA Inspector General in his October 2016 Management Alert to update the guidance on Safe Drinking Water Act emergency authority and require training on the use of that authority.

62.Did EPA do an adequate job in the instance of the lead crisis in Flint, MI? If not, what specifically would you do differently?

No. If confirmed and faced with a similar situation, I would inform the state that EPA will take action if they fail to do so, and use EPA's emergency authority if the state fails to act.

63.How specifically would you strengthen EPA's lead and copper rule for drinking water to ensure, as Mr. Trump suggested, that water is adequately tested and treated before children are exposed to lead?

It would be inappropriate for me to prejudge the outcome of a matter that may come before me if confirmed as Administrator. If confirmed I would request a full briefing by EPA staff on potential revisions consistent with EPA legal authorities.

AMERICAN OVERSIGHT

64.House Republican leadership said in 2016 that EPA should get new lead-in-water rules proposed as soon as possible, and criticized the agency for being too slow when it promised to get them out by 2017. By what date would you commit to get a new rule issued? How would you ensure that final improvements to this rule are issued and implemented quickly?

If confirmed, I will make issuing revisions to the Safe Drinking Water Act Lead and Copper Rule a priority. As I am not at the Agency, I do not know what is the soonest feasible date.

65.An independent advisory group of experts including state regulators and water industry representatives recommended to EPA that all old lead service lines that pump water into homes from water mains should be replaced. The water utility trade associations support this. Do you support that recommendation? In your view, what would be the best way to pay for these replacements—Congressional Appropriations, issuance of debt by cities and states, a combination, or other? Please explain.

It is my understanding that, if properly implemented, corrosion control treatment of water protects public health from exposure to lead from lead service lines. EPA's highest priority should be to ensure that this treatment is being properly employed. Replacement of lead service lines is a long term goal that municipalities should incorporate into their capital improvement plans, which are generally implemented through state and local funds. Federal assistance through the Drinking Water State Revolving Funds and the new WIFIA program can provide additional assistance.

66.Do you agree that removing lead from gasoline was an important and successful EPA rulemaking? Why or why not?

I have not evaluated this issue.

67.Lead has no safe level of human exposure, particularly for children. What actions will you take to require lead to be removed from children's environment to reduce their exposure to lead in air, water, soil, and paint?

If confirmed, I will faithfully carry out the authorities granted to EPA by Congress to reduce exposure to lead.

68.In March 2016 it was reported that 19 drinking water systems in Oklahoma had elevated lead levels. Of the 100 water systems with the highest self-reported lead levels between 2013 and 2015, seven are located in Oklahoma. One exceeded the federal action level by 1,175 parts per billion - many times greater than the amount of lead needed to cause the death of a fetus or spontaneous abortion, or

AMERICAN OVERSIGHT

permanent severe developmental problems. As Oklahoma A.G., what specific actions did your office take to protect children against lead poisoning?

The Oklahoma Department of Environmental Quality and the Oklahoma Water Resources Board have primary responsibility for implementing and enforcing environmental laws in Oklahoma. Questions relating to actions taken by the State of Oklahoma with regard to lead in water systems should thus be directed to those environmental regulators.

69.How will you ensure that required evaluation of state drinking water primacy programs is conducted and how will you use EPA authority and resources to help states carry out their Safe Drinking Water Act primacy responsibilities?

If confirmed, I will focus on EPA's core missions, including oversight of state implementation of the Safe Drinking Water Act.

70.Will you direct EPA to continue and follow up on findings from 2016 increased oversight of state implementation of the Safe Drinking Water Act Lead and Copper Rule?

Yes.

71.What are your expectations for the 2017 Proposed Revisions to the Safe Drinking Water Act Lead and Copper Rule?

It is my understanding that EPA expects to issue that proposed rule in 2017.

72.In our conversation in my office, I asked for your thoughts on the Paris Agreement and the US commitment to the Paris Agreement. You pointed out that the Paris Agreement commitments are non-binding and when I asked you whether you thought the US should stay in the Paris Agreement you did not want to comment because you felt that the Paris Agreement is a matter handled in full by the State Department. Is that a fair characterization of your comments to me?

I believe I stated that a decision as to whether the U.S. stayed in the Paris Agreement would be a decision for the State Department.

73.Does that mean that you would advise the EPA to refrain from engaging with the State Department on US engagements with the UNFCCC and the execution process around the Paris Agreement?

Interagency cooperation is very important. Should the Administration decide to continue to participate in the Paris Agreement, and if I am confirmed as Administrator, I will collaborate with all involved agencies to ensure that commitments made on behalf of the United States are

AMERICAN OVERSIGHT

achievable and consistent with requisite legal authorities delegated by Congress.

74.How does your position that EPA should ostensibly recuse itself from State Department responsibilities and engagements on the Paris Agreement comport with any plans that you, as the next EPA administrator, may execute to rescind or alter domestic policies that affect the US National Determined Contribution (NDC) to the Paris Agreement?

As I stated in a previous answer, should the State Department decide to continue to participate in the Paris Agreement and if I am confirmed as Administrator, I will work with all involved agencies to ensure that commitments made on behalf of the United States are achievable and consistent with requisite legal authorities delegated by Congress.

75.Recently at the World Economic Forum in Davos, Switzerland, Chinese President Xi Jinping expressed China's great interest in being the world's leader on a number of issues including action to address climate change. Do you believe it is the U.S.'s national interest to cede leadership to the Chinese on global action to address climate change?

It is the mission of the State Department to advance our national interests within the realm of foreign policy. If confirmed, I will work to advance the mission of the EPA, which is to protect human health and the environment, consistent with the State Department's strategy for international engagement on climate change.

76.Do you believe climate change is a real and serious threat to the planet?

The climate is changing and human activity impacts our changing climate in some manner. The ability to measure with precision the degree and extent of that impact, and what to do about it, are subject to continuing debate and dialogue.

77.Do you accept the scientific consensus that should average global temperatures reach or exceed +2 degrees Celsius that many regions of the world will very likely experience catastrophic changes in the environment that may very likely impact the safety and prosperity of many people?

• Do you believe that uncertainty in climate science warrants greater study before the U.S. takes significant action to reduce greenhouse gas pollution?
• If so, are you aware that the portion of the scientific community that claims there is uncertainty in the science is limited to limited to about 5% of climate science communities?
• If you believe that the very small portion of the world's climate science community who hold outlier opinions on the severity of climate change justifies inaction, why wouldn't you give similar credence to other outlying opinions in the

AMERICAN OVERSIGHT

climate science community that hold that global average temperatures may exceed 10 degrees Celsius and that catastrophic events may occur as soon as five or ten years?

The climate is changing and human activity impacts our changing climate in some manner. The ability to measure with precision the degree and extent of that impact, and what to do about it, are subject to continuing debate and dialogue. If confirmed, I will work to ensure that any regulatory actions are based on the most up to date and objective scientific data.

78.Our ability to predict the weather has improved dramatically over the last 20 years with the advent of supercomputers, new satellite monitoring options, and vastly superior atmospheric models. But still floods, droughts, hurricanes and similar phenomena occur and cause damage with sometimes only limited warning. What precision of prediction do you require before you are willing to accept the scientific community's overwhelming consensus that unchecked increases in greenhouse gas emissions will very likely have catastrophic effects, many of which the National Climate Assessment has described in detail every 4 years since 1990?

The ability to measure with precision the degree and extent of human activity on our changing climate, and what to do about it, are subject to continuing debate and dialogue. If confirmed, I will work to ensure that any regulatory actions are based on the most up to date and objective scientific data.

79.Do you believe that science should guide our nation's environmental policy?

Congress has made it very clear in the Clean Air Act, the Clean Water Act and other major environmental laws that the regulatory actions of the EPA should be based on the most up to date and objective scientific data. If confirmed, I will follow the directives of Congress to set science-based standards to protect the environment and human health.

80.What would have to change about our ability to predict the effect of increasing greenhouse gas emissions in Earth's atmosphere for you to consider it adequate?

If confirmed, I will work to ensure that any regulatory actions are based on the most up to date and objective scientific data, including the ever-evolving understanding of the impact increasing greenhouse gases have on our changing climate.

81.Would you support making those changes in sufficient time to ward off any negative effects of increasing those emissions?

AMERICAN OVERSIGHT

The ability to measure with precision the degree and extent of human activity on our changing climate, and what to do about it, are subject to continuing debate and dialogue. If confirmed, I will make sure the agency's regulatory actions are based on the most up to date and objective scientific data.

82.What is your scientific background and what expertise do you have in environmental science?

My degrees are in communications, political science, and law. As with prior EPA Administrators who held bachelor of arts degrees, I completed science courses as a prerequisite to requiring my degree. Also, I understand that six of the 12 people who have been confirmed as EPA Administrator (including the first four individuals) had law degrees.

83.How do you square your opinion that air regulation is a matter for the states and that EPA has limited authority to mandate regulation of air pollution, with the court's overwhelming opinions that EPA has exclusive authority to regulate air pollution including greenhouse gases?

The concept of cooperative federalism is a bedrock principle of the Clean Air Act, the Clean Water Act and other EPA-administered laws. Whether working to improve air quality, water quality or other important environmental objectives, Congress made achieving these a shared responsibility between the EPA and the states. If confirmed, I will respect the intention of Congress and relative statutory framework.

84.Given that you are one of the lead attorneys challenging the clean power plan, a regulation promulgated by EPA in part due to the court's decision in landmark cases that determining EPA authority and responsibility to regulate greenhouse gases for domestic sources, in you rescind the Clean Power Plan:

It is unclear what question is being asked.

85.What policies would you promulgate to replace the Clean Power Plan, which you would have to do to ensure the EPA is in compliance with the court orders to regulate greenhouse gases?

It would be inappropriate for me to prejudge an issue that may come before me for decision if I am confirmed as Administrator. If the issue comes before me, I will ensure that the issue is fully and fairly considered with input from staff, as part of a transparent process that seeks input from stakeholders, and that is consistent with EPA's statutory authorities.

86.What assurances will you give the public that your proposed replacement rules will withstand the tests established in the case law determining EPA's endangerment finding is adequate and legal and sufficiently regulates carbon pollution to protect public health and safety?

AMERICAN OVERSIGHT

It would be inappropriate for me to prejudge an issue that may come before me for decision if I am confirmed as Administrator. If the issue comes before me, I will ensure that the issue is fully and fairly considered with input from staff, as part of a transparent process that seeks input from stakeholders, and that is consistent with EPA's statutory authorities.

87.Do you trust the analysis, concerns and recommendations of security experts at the State Department, Department of Defense, Central Intelligence Agency, The Navy War College, UN Security Council, and the World Bank, who have expressed growing concerns over the threat climate change poses to national and global security?

I have no reason to disagree with the statements from the listed security experts, although I have not made any attempt to independently verify their accuracy.

88.U.S, national security experts that are working to incorporate climate modeling and climate change assessments into our national security planning apparatus rely on sound scientific analysis, modeling data, and technical assistance from the EPA in interpreting the data. Will commit to continuing EPA's engagements with the agencies and departments responsible protecting our national security and advancing our understanding and preparedness for the security risks climate change poses to the United States?

Interagency cooperation is very important. If I am confirmed as Administrator, I will collaborate with any agency or department that may require the EPA's technical expertise to strengthen their own administrative actions.

89.What assurances can you provide the public, particularly vulnerable communities at greatest risk from pollution, that you will represent their interests fairly as administrator when your personal political campaigns, as well as organizations that you have held leadership positions within - like the Republican Attorneys General Association, has received hundreds of thousands of dollars in contributions from the fossil fuel industry because of your working championing their interests by challenging laws regulating these industries?

As I explained in my testimony to the Committee, I am a firm believer in the EPA's mission to protect the environment and look forward to the opportunity lead the agency to help provide our future generations with a better and healthier environment for all Americans.

90.You have lost many of the lawsuits challenging EPA's authorities, including the Chesapeake Bay TMDL and the lawsuit challenging the endangerment finding on greenhouse gases. Given the difficulty you've had winning cases, what

AMERICAN OVERSIGHT

assurances can you provide the committee of your sound judgment when it comes to understanding our nation's environmental statutes?

As Attorney General of Oklahoma, my focus has been on examining federal environmental statutes and relevant case law to evaluate the legality of the EPA's actions and the impact of those actions on Oklahoma. Oklahoma filed a friend of the court brief with the U.S. Court of Appeals for the Third Circuit in part to inform the court how EPA's interpretation of TMDL and other matters involved in the challenge would impact other states, including Oklahoma. If I am confirmed, I will apply those lessons which I have developed in the performance of my duties as Attorney General and would continue to do so if confirmed as Administrator.

91.Will you work with all stakeholders and the State Department on execution of the Kigali Amendment to the Montreal Protocol to phasedown hydrofluorocarbons (HFCs) and will you commit to ensuring that any actions EPA may take to modify or rescind the Safe New Alternatives Program (SNAP) rules on HFCs coincide with the U.S.'s acceptance or ratification of the Kigali Amendment?

Should the State Department decide to advance the Kigali Amendment to the Montreal Protocol and if I am confirmed as Administrator, I will work with all involved agencies and impacted stakeholders to ensure that EPA's actions related to hydrofluorocarbons (HFCs) are coordinated accordingly.

AMERICAN OVERSIGHT

Ranking Member Carper:

1.Please list all public speeches or presentations you have made that included references to any issue related to energy or the environment since 1998, and please provide copies (written, audio, or video) of any such speeches or presentations. Please also indicate whether you received compensation for any such speech or presentation (whether stipend, travel, lodging expenses, or other form of remuneration) along with the name of the entity that provided such compensation and the amount thereof.

Please see attached list of speeches and enclosed copies of speeches in response to this request.

2. Please provide a list of the skills and experiences you bring to the EPA Administrator position and why you believe that you would be a good fit for the position.

I am a licensed attorney with significant experience in constitutional law, the Administrative Procedure Act, and Environmental Protection Agency administered statutes. This body has recognized my expertise in EPA related matters on several occasions, inviting me to testify before this and other committees on matters relating to the EPA. My legal education and profession has trained me to ask probing questions and think critically regardless of the subject.

3. Please define the Environmental Protection Agency (EPA)'s mission and the role you believe that sound science plays in fulfilling that mission.

The mission of EPA is to protect human health and the environment. Where Congress directs the EPA to act based upon scientific findings, the EPA should rely on well-reasoned, and sound, scientific findings.

4. In a 2006 article in The Oklahoman, you were described as someone that "believes in negotiating, but not compromising." Do you feel this continues to be an accurate description of you? If so, why? Do you agree with President Nixon's articulation of the principal roles and functions of the EPA? If you do not agree, please explain the aspects with which you disagree and why.

Based on the limited information provided in the question, I am uncertain about the article to which the question refers. The content and context of

AMERICAN OVERSIGHT

the article and quote are not readily apparent. However, if confirmed as Administrator, I will take my responsibility to protect human health and the environment for all Americans with the highest possible dedication and commitment in accordance with the legal authorities established by Congress. I have a record of working on a bipartisan basis.

5. Do you think it is constitutional for Congress to direct EPA to set national standards that protect public health? Is it constitutional for Congress to do that even if the pollution only harms citizens of a single state?

The constitutionality of laws enacted by Congress depends on the particulars of the particular law, and will typically be decided by a court. Courts have generally recognized that Congress has the authority to create the EPA and vest certain powers in it.

6. Mr. Pruitt, your official biography on the website of the Oklahoma Attorney General's office says that you are "...a leading advocate against the EPA's activist agenda." The EPA, the agency you have been nominated to lead, has the critical mission "to protect human health and the environment" for all Americans. When you sued the EPA over the Good Neighbor Rule (Cross-state Rule), how did that protect human health and the environment for downwind states?

I firmly believe that the EPA plays an important role in addressing interstate water and air quality issues, but it must do so within the bounds of its legal authority. The actions undertaken by the Office of Attorney General challenging the Cross State Air Pollution Rule related to whether EPA had properly accounted for and allocated pollution from upwind states, as mandated by Congress. Regulations that are not on solid legal foundation and that cannot survive judicial review will not result in environmental protections.

7. You've been part of numerous lawsuits against the EPA – against clean air, clean water and climate regulations. However, you also have stated you are for clean air and clean water. Can you name one Clean Air Act regulation – not a voluntary or grant program – that is on the books today that you do support?

I firmly believe that the EPA plays an important role, especially as it relates to cross-state air and water pollution, but EPA must do so within the bounds of its legal authority as provided by Congress. Regulations that are not on solid legal foundation and that cannot survive judicial review will not result in environmental protections.

AMERICAN OVERSIGHT

8. Are there any other EPA regulations that are on the books today that you do support?

I have not conducted a comprehensive review of existing EPA regulations. As Attorney General, I have brought legal challenges involving EPA regulations out of concern that EPA has exceeded its statutory authority based on the record and law in that matter.

9. President-elect Donald Trump has said repeatedly—at least half a dozen times—on the campaign trail that he would starve the EPA of funding or completely eliminate the agency. In March last year, the President-elect stated in reference to the EPA:

"We are going to get rid of it in almost every form. We're going to have little tidbits left but we're going to take a tremendous amount out,"

After the election, the President-elect didn't seem to change his tune. President-elect Trump stated two days after the election again in reference to the EPA:

"Environmental protection, what they do is a disgrace; every week they come out with new regulations,"

You also have a history attacking the agency. Please tell us why we should disregard the President-elect's statement on the EPA, disregard your actions and only believe your words that you will support clean air and clean water laws?

As I testified, I support the EPA's mission to protect human health and the environment. If confirmed, I will faithfully execute the environmental laws enacted by Congress.

10. As Administrator, will you take into account the true costs of air pollution including the adverse health and environmental impacts on states that are adversely affected by upwind pollution sources?

As I stated at the hearing, costs are important in the rulemaking process and the Courts have recognized that important factor. The Clean Air Act prescribes when costs should be considered and to what extent in a

AMERICAN OVERSIGHT

rulemaking. If confirmed, I commit to faithfully executing the law as enacted by Congress.

11. As Administrator, will you take into account the full economic and job benefits that result from clean air protections such as the economic benefits to communities from clean air and American leading businesses that manufacture advanced technologies?

As I stated at the hearing, the EPA should consider the benefits of cleaner air for the public. The Clean Air Act prescribes certain instances where the EPA is obligated to conduct a cost-benefit analysis as part of the rulemaking process. If confirmed, I commit to faithfully execute the law as enacted by Congress.

12. If it is technologically and economically feasible to eliminate the release of a particular pollutant, do you agree that we should do so?

Environmental statutes prescribe certain instances where technological or economic feasibility is a relevant factor to consider in a rulemaking. If confirmed, I commit to faithfully execute the law as enacted by Congress.

13. I have often found that environmental regulations can and often drive innovation. We have seen that with the Acid Rain Program, CAFÉ, Clean Diesel standards, RFS and most recently with the mercury standards. Do you agree environmental regulations often drive innovation? If so, why? If not, why not?

The factors that lead to technological innovation can be complex and varied, and legal requirements may be one such factor.

14. Who serves or has served as your scientific advisor for climate change related issues during your time as attorney general? Please provide their names, their titles, and when they served as your science advisors.

The Office of Attorney General does not have a science advisor to advise on climate change related issues.

15. Mr. Pruitt, my State of Delaware is already seeing the adverse effects of climate change with sea level rise, ocean acidification, and stronger storms. While all states will be harmed by climate change, the adverse effects will vary by

AMERICAN OVERSIGHT

state and region. Can you comment on why it is imperative that we have national standards for the reduction in carbon pollution?

If confirmed, I will fulfill the duties of the Administrator consistent with Massachusetts v. EPA and the agency's Endangerment Finding on Greenhouse Gases respective of the relative statutory framework established by Congress.

16. Pruitt, will you agree that there will be no retaliation against EPA employees who work on climate change issues?

If confirmed, yes.

17. Clean car standards save consumers money at the pump and help reduce oil imports. Automakers are complying with vehicle standards ahead of schedule. As Administrator, will you commit to support, defend and enforce EPA's current programs to address emissions from vehicles?

Congress has enacted numerous statutes directly or indirectly affecting transportation fuels, transportation fuel infrastructure, and the vehicles that consume those fuels. Congress committed many of those statutes to the EPA Administrator's responsibility. If confirmed as Administrator, I would administer each of those statutes in accordance with Congress's statutory objectives, and in light of the administrative record in each given proceeding. And I would work with Congress to ensure that its statutes continue to provide the best possible legal framework for governing American fuels, fuel infrastructure, and vehicles, and for promoting American energy independence, energy security, and environmental protection.

18. What is your definition of sound science?

Sound science is that which complies with applicable laws and federal guidance regarding scientific integrity, peer review, information quality, and transparency.

19. Prior to your nomination, how have you acquired scientific information relevant to the missions of the EPA? And since your nomination?

AMERICAN OVERSIGHT

As Attorney General of Oklahoma, my focus has been on examining federal environmental statutes and relevant case law to evaluate the legality of the EPA's actions. Legal education is rooted in the Socratic method, which trains law students through probing questions and critical thinking and I apply those lessons and skills in the performance of my duties as Attorney General and would continue to do so if confirmed as Administrator.

20. Please list all undergraduate and postgraduate science courses that you have taken. Please describe any other science education that you have completed over the years beyond high school.

My degrees are in communications, political science, and law. As with prior EPA Administrators who held bachelor of arts degrees, I completed science courses as a prerequisite to requiring my degree.

21. President Nixon articulated that an important role for EPA is "The conduct of research on the adverse effects of pollution . . . the gathering of information on pollution, and the use of this information in strengthening environmental protection programs and recommending policy changes." Do you agree with President Nixon that EPA has an important role to play in researching any emerging risks from pollution as well as strengthening protections and recommending policy changes based on the science?

Yes.

22. Do you think the U.S. National Academy of Sciences is a reliable authority on scientific matters?

I have no reason to think otherwise, but I have not had occasion as Attorney General to consider this issue.

23. What degree of scientific certainty should the EPA have about a potential health or environmental threat before acting to protect people from that threat?

EPA actions are governed by statutes such as the Clean Air Act and other legal authorities and relevant case law, which establish applicable legal and scientific standards for the Administrator to act. If confirmed, I will adhere to these authorities to fulfill EPA's mission to protect human health and the environment for all Americans.

AMERICAN OVERSIGHT

24. Do you support legislative efforts to change the independent nature of the EPA' s Science Advisory Board? If so, please explain why.

I am unfamiliar with the legislative efforts being referred to in this question. If confirmed, I expect to be briefed by EPA staff before taking any position on such matters.

25. If confirmed, do you plan to propose or advocate for budget cuts to the EPA's FY 2018 budget? If so, for which programs would you reduce funding? Would you target the EPA's research programs? Are there areas of agency action where you believe additional financial resources are needed?

I have no first-hand knowledge of EPA's development of its FY 2018 budget request. If confirmed, I look forward to working with EPA's budget staff and program offices to develop a budget and will work to ensure that the resources appropriated to EPA by Congress are managed wisely in pursuit of the Agency's important mission and in accordance with all applicable legal authorities.

26. For the most part, patients and their families only participate in scientific trials and studies once they know their privacy - and any resulting health-related information - will remain confidential and secure. If confirmed, do you commit to respecting confidentiality agreements that exist between researchers and their subjects? Will you protect the health information of the thousands of people that have participated in health studies in the past?

If confirmed, it will be my privilege to work with EPA scientists and the thousands of other dedicated public servants at EPA who have chosen to devote their careers to improving public health and our environment. I have no first-hand knowledge of EPA's policies or practice concerning the confidentiality of health information. If confirmed, I would expect to learn more about the existing practice and I commit to follow applicable legal authorities regarding the confidentiality of health information.

27. If confirmed, how will you ensure that EPA maintains independent science, transparent decision-making, and scientific free speech?

If confirmed, it will be my privilege to work with EPA scientists and the thousands of other dedicated public servants at EPA who have chosen to

AMERICAN OVERSIGHT

devote their careers to improving public health and our environment. I also commit, if confirmed, to follow applicable laws and federal guidance on scientific integrity, information quality, and transparency.

28. Mr. Pruitt, when Congress passed our bedrock environmental laws, we directed EPA to periodically review and update the federal minimum health protection standards based on the best available scientific evidence. Do you agree that these federal minimum standards must be based on the best available science?

I agree that EPA regulatory actions must be based on the best available science in accordance with the law. If confirmed, I commit to faithfully execute the law as enacted by Congress.

29. Mr. Pruitt, conflicts of interest threaten the integrity of science and public trust in the agency's scientific determinations. Scientists are not immune from having their work and conclusions influenced by their financial interests. Allowing scientists with conflicts of interest to serve as peer reviewers is contrary to widely accepted scientific integrity practices, including those of the National Academies of Sciences, the National Institutes of Health, and other scientific bodies. Industry funded scientists who may have unique expertise can be invited to present information to peer reviewers or an advisory committee, but should not actually serve as a reviewer or member of the committee. Can you explain what steps you would take as Administrator to ensure that scientists with financial conflicts of interest do not threaten the independent peer review process at EPA?

Independent peer review is critical to ensuring the scientific integrity of EPA actions. If confirmed, it will be my privilege to work with EPA's scientists and the thousands of other dedicated public servants at EPA who have chosen to devote their careers to making a healthier and cleaner environment. I commit, if confirmed, to follow applicable legal authorities regarding conflicts of interests in the scientific peer review process.

30. Mr. Pruitt, do you agree that for scientific research to be credible, it must be subject to objective, independent peer review before it is published and remain subject to scrutiny after it is published?

Independent peer review is critical to ensuring the integrity of scientific research. If confirmed, it will be my privilege to work with EPA's scientists and the thousands of other dedicated public servants at EPA who have chosen to devote their careers to making a healthier and cleaner

AMERICAN OVERSIGHT

environment. I commit, if confirmed, to follow applicable legal authorities regarding the peer review process for scientific research.

31. Mr. Pruitt, do you agree that for scientific research to be credible, scientists must disclose all sources of funding for their research?

Credible scientific research is critical to the EPA's mission and, if confirmed, I commit to follow applicable legal authorities regarding scientific research.

32. In the 1970 and 1990 Clean Air Act Amendments, Congress delayed older coal power plants air control requirements because Congress thought that most of the old plants would be shuttered in the decade after the legislation passed. Congress thought there was no need to invest in new technologies at these old, dying plants. Did many of these coal plants actually retire? Do you know the average age of our coal fleet?

I understand that the U.S. Energy Information Administration's Electric Power Annual 2015 report released in November 2016 indicated that between 2005 and 2015 more than one-third of U.S. coal-fired power plants retired and the remaining fleet has an average age of 38 years.

33. Do you know what the role the price of natural gas plays in industry decisions to retire coal plants and fuel switch to natural gas?

I am aware that market conditions, such as the reduced price of natural gas, and costly environmental regulations have been causing coal-fired power plants to prematurely shut-down or convert to natural gas.

34. In your cases against the EPA's Mercury and Air Toxics Rule, who served as your scientific advisor for the case?

Oklahoma's petition to review the Mercury and Air Toxics Rule was a legal challenge brought on the administrative record and argued that EPA acted contrary to law and arbitrarily and capriciously by not considering the costs of regulation in determining whether it was necessary and appropriate to regulate mercury from fossil fuel power plants within the meaning of Section 112(n). The Supreme Court ultimately agreed with Oklahoma's argument that EPA failed to act in accordance with the rule of law when it ignored costs in its determination and remanded the matter to the D.C. Circuit.

AMERICAN OVERSIGHT

35. Mr. Pruitt, ten percent of American women have dangerous levels of mercury in their bodies. But recent data shows that since the United States started cleaning up emissions from coal power plants, not only has mercury pollution in the North Atlantic fallen dramatically, so has the concentration of mercury in Atlantic fisheries. Mercury in Atlantic bluefin tuna is down 19% in only eight years. Given this resounding confirmation that regulation works, how firmly can you assure us that if you are confirmed, EPA's recent successful crackdown on all sources of mercury emissions, including coal power plants will accelerate, rather than pulling back?

As I stated in my testimony, mercury is listed as a hazardous air pollutant under section 112 of the Clean Air Act and is subject to regulation from listed source categories of hazardous air pollutants. If I am confirmed as Administrator, I will regulate under Section 112 in a manner that is consistent with Congress's intent in enacting that provision. I will also faithfully administer other federal statutes that regulate mercury to the extent that they are under my jurisdiction, including the Mercury Export Ban Act of 2008, the Mercury-Containing and Rechargeable Battery Management Act of 1996, the Clean Water Act, the Emergency Planning and Community Right-to-Know Act, the Resource Conservation and Recovery Act, and the Safe Drinking Water Act.

36. As you may remember, we had three exchanges over the issue of whether EPA should regulate toxic air emissions, including mercury, from power plants, specifically through the provisions authorized under Section 112 of the Clean Act. We also discussed your lawsuits, one pending, against the recent EPA rule that again addresses regulation of power plant mercury and other toxic air emissions under Section 112. Below is a direct quote from our second exchange, when I asked you directly about regulating power plant toxic air emissions:

"Senator, I actually have not stated that I believe the EPA should not move forward on regulating mercury or adopting rulemaking in that regard. Our challenge was with regard to the process that was used in that case and how it was not complicit with statutes as defined by congress. So there is not a statement or belief that I have that mercury is something that shouldn't be regulated under section 112 as a hazardous air pollution. A HAP."

These statements conflict directly with the language in the brief that you filed on June 2012 in White Stallion Energy, et al. V EPA: which says: "Finally, the record does not support EPA's findings that mercury, non-mercury HAP metals, and acid gas haps pose public health hazards."

AMERICAN OVERSIGHT

These statements also conflict directly with language in the brief in the pending case that you filed April 25, 2016 with Murray Energy Corporation, et al v EPA: "EPA cannot properly conclude that it is "appropriate and necessary to regulate HAPs under Section 112."

These written statements quite clearly directly contradict your statements before our committee. Which statement is false, the verbal before our committee or the legal documents you filed pending in court? If confirmed, will you recuse yourself from any involvement in questions or cases related to regulating air toxic emission from power plants under Section 112(d) of the Clean Air Act?

As I stated in my testimony, mercury is listed as a hazardous air pollutant under Section 112 of the Clean Air Act and is subject to regulation from listed source categories of hazardous air pollutants. Electric utility steam generating units are subject to regulation under Section 112 only upon a lawful showing that their regulation is appropriate and necessary. In Michigan v. EPA, the Supreme Court agreed with Oklahoma's legal position when it concluded that EPA interpreted Section 112(n) unreasonably by failing to consider costs in its appropriate and necessary determination. That challenge was made by Oklahoma on the specific administrative record before the court in that matter and all statements regarding the sufficiency of regulation in that case relate only to the material in the record before the Agency. If I am confirmed as Administrator, I will apply the Clean Air Act faithfully in all matters before me and will follow the advice of the EPA Ethics Counsel in determining any recusals.

37. As you may remember, we had three exchanges over the issue of whether EPA should regulate mercury (and other air toxic) emissions from power plants, specifically through the provisions authorized under Section 112 of the Clean Act. We also discussed your lawsuits, one pending, against the recent EPA rule that implement regulations to regulate power plant mercury emissions under Section 112. As you may remember, I specifically asked you at the end of the hearing:

"Based on your earlier statements, that if confirmed we can have your assurances that the EPA will continue to regulate mercury emissions from power plants under Section 112 of the Clean Air Act and you will not defer to the states."

You answered:

AMERICAN OVERSIGHT

"Mercury under Section 112 is something that EPA should deal with and regulate."

You stated this many times. I was very clear in my questioning that I was asking about mercury emissions and of course, the many other air toxic emissions, which the courts have said must be regulated under Section 112(d) from power plants. However, in this answer, you only mentioned mercury and not power plant mercury emissions, and you completely disregarded the other air toxics that are emitted by power plants, which include acid gases and carcinogenic metals like arsenic, nickel and cadmium. So please clarify, if confirmed, can we have your assurance that the EPA will continue to regulate power plants using the technology based standards required by Section 112(d) of the Clean Air Act and you will not defer to the states. Please answer in regards to all power plant air toxic emissions, not just on the question of mercury itself, and not just with respect to whether mercury should be regulated, but as to whether power plant mercury and other air toxics must be regulated.

As I stated in my testimony, mercury is listed as a hazardous air pollutant under Section 112 of the Clean Air Act and is subject to regulation from listed source categories of hazardous air pollutants. Electric utility steam generating units are subject to regulation under Section 112 only upon a lawful showing that their regulation is appropriate and necessary. In Michigan v. EPA, the Supreme Court agreed with Oklahoma's legal position when it concluded that EPA interpreted Section 112(n) unreasonably by failing to consider costs in its appropriate and necessary determination. The Mercury and Air Toxics Standard has not been vacated by the Supreme Court or the D.C. Circuit and currently regulates both mercury and other air toxics. As Administrator, I will enforce the Mercury Air Toxics Rule so long as that Rule remains in force.

38. As you may remember, we had three exchanges over the issue of whether EPA should regulate mercury (and other air toxic) emissions from power plants, specifically through the provisions authorized under Section 112 of the Clean Act. We also discussed your lawsuits, one pending, against the recent EPA rule that implement regulations to regulate power plant mercury emissions under Section 112. After our first exchange, you stated:

"There was no argument that we made from a state perspective that mercury is not a hazardous air pollutant under Section 112. Our argument focused upon the cost-benefit analysis that the EPA failed to do and the Michigan v EPA case the Supreme Court actually agreed. It was more about the process again that the EPA was supposed to go through in regulating mercury to provide certainty to

AMERICAN OVERSIGHT

those in the workplace, not a statement in respect whether mercury should be regulated or not under section 112."

Mr. Pruitt, in this exchange, did you mean to avoid the question whether power plant mercury and other HAPs must be regulated under the technology based requirements of maximum achievable control, under Section 112(d)? Or do you agree the Supreme Court, which expressly declined to consider this question, leaving the MATs Rules Section 112(d) regulations in place? Please fully explain your previous statements.

Neither statement is false. As I stated in my testimony, mercury is listed as a hazardous air pollutant under Section 112 of the Clean Air Act and is subject to regulation from listed source categories of hazardous air pollutants, and Oklahoma was not challenging mercury's status as a HAP in the case you reference. Electric utility steam generating units are subject to regulation under Section 112 only upon a lawful showing that their regulation is appropriate and necessary. In Michigan v. EPA, the Supreme Court agreed with Oklahoma's legal position when it concluded that EPA interpreted Section 112(n) unreasonably by failing to consider costs in its appropriate and necessary determination. The Mercury and Air Toxics Standard has not been vacated by the Supreme Court or the D.C. Circuit and currently regulates both mercury and other air toxics. As Administrator, I will enforce the Mercury Air Toxics Rule so long as that Rule remains in force.

39. As you may remember, we had three exchanges over the issue of whether EPA should regulate mercury (and other air toxic) emissions from power plants, specifically through the provisions authorized under Section 112 of the Clean Act. We also discussed your lawsuits, one pending, against the recent EPA rule that implement regulations to regulate power plant mercury emissions under Section 112. As you may remember, I specifically asked you at the end of the hearing:

"Based on your earlier statements, that if confirmed we can have your assurances that the EPA will continue to regulate mercury emissions from power plants under Section 112 of the Clean Air Act and you will not defer to the states."

You answered:

"Mercury under Section 112 is something that EPA should deal with and regulate."

AMERICAN OVERSIGHT

You stated this many times during our exchanges. I was very clear in my questioning that I was asking about mercury emissions from power plants. And of course as well the many other air toxics emitted by this industry and listed by congress for regulation. However, in this answer, you only mentioned mercury and not power plant mercury emissions, or other air toxics at all. So please clarify,

- Do you agree that the EPA's recent consideration of the costs of the Mercury and Air Toxics Rule that shows that the agency has met the "necessary and appropriate" criteria Congress provided under 112(n) to direct the EPA to regulate power plant mercury (and other air toxic) emissions under Section 112, and more specifically under Section 112(d)? If not, why not?
- If you do not agree that EPA has met the "necessary and appropriate" criteria found in Section 112(n), what is your understanding of what that would mean for the Mercury and Air Toxics Rule?
- If the pending case you brought before the DC Circuit challenging EPA's cost analysis (Murray Energy Corporation, et al v EPA), is successful what is your view of what EPA would have to do to regulate mercury and other hazardous air pollutant power plant emissions under Section 112?

As I stated in my testimony, mercury is listed as a hazardous air pollutant under Section 112 of the Clean Air Act and is subject to regulation from listed source categories of hazardous air pollutants. Electric utility steam generating units are subject to regulation under Section 112 only upon a lawful showing that their regulation is appropriate and necessary. In Michigan v. EPA, the Supreme Court agreed with Oklahoma's legal position when it concluded that EPA interpreted Section 112(n) unreasonably by failing to consider costs in its appropriate and necessary determination. In my capacity as Attorney General of the State of Oklahoma, on remand the petitioner group has argued that EPA's supplemental finding regarding costs is contrary to law and arbitrary and capricious for the reasons stated in that brief. If the D.C. Circuit finds against EPA, I am confirmed as Administrator and the matter comes before me at that time, I will seek and follow the advice of EPA Ethics Counsel in determining whether I may participate in that matter. If I do participate in that matter, I will apply the Clean Air Act faithfully and use my best efforts to take appropriate action in light of the administrative record before the Agency at that time.

40. In the pending case you brought before the DC Circuit challenging EPA's cost analysis (Murray Energy Corporation, et al v EPA), the following statement is included in your brief:

"EPA also claims that, even though it was able to quantify highly uncertain IAQ benefits purportedly resulting from mercury emissions, other health and

AMERICAN OVERSIGHT

environmental benefits of reducing EGU mercury, acid gas, and non-mercury metals emissions simply could not be quantified. But these purported benefits are to speculative to support "appropriate and necessary" finding for the same reasons the Agency cannot quantify them: they are not supported by the scientific literature."

As you probably know, the health benefits of cleaning up hazardous air pollutants are many, although many are difficult to quantify and certainly difficult or impossible to monetize. There are, however, several studies on how to quantify loss of IQ from mercury exposure and some early studies on how to quantify long-term effects of exposure. If confirmed, how do you recommend the EPA calculate the health risks to the unborn that may be exposed to mercury-laden fish because of power plant mercury emissions? How would you quantify the health risks of the Oklahomans living near the forty lakes that have mercury fish consumption advisories? There are also emerging studies quantifying the health impacts of the toxic metals and acid gases emitted by power plants, although monetizing the precise health costs of each pollutant are not possible as they are emitted in the toxic soup. How would you justify not protecting people living near these emissions if it were not possible to precisely quantify the health risks of exposure to power plant emissions of hydrochloric acid, hydrofluoric acid, nickel, arsenic, chromium and other heavy metals?

If I am confirmed as Administrator, I look forward to working with EPA staff to arrive at a transparent and scientifically sound process for determining the health risks associated with any activity that is properly before me at the Agency, including those related to mercury exposure, and regulating those activities as appropriate consistent with Congress's intent in enacting the Clean Air Act.

41. What industry is the largest emitter of mercury air emissions in this country? The second? The third? Please provide peer-reviewed data and sources for this answer.

EPA's technical support document (v2) for the 2011 National Emissions Inventory indicates that the industries that are the three largest point source emitters of mercury in the U.S. are (1) utility coal boilers, (2) electric arc furnaces, and (3) industrial, commercial institutional boilers and process heaters.

42. What impacts do mercury power plant air emissions have on unborn children? Can you explain how power plant mercury emissions settle in water bodies and eventually can impact the unborn?

AMERICAN OVERSIGHT

Some portion of mercury emitted into the air by power plants is deposited directly or indirectly into a watershed. Once present in the watershed, it can be naturally converted into methylmercury, which can then can be absorbed by aquatic organisms, such as fish, and consumed by humans. The unborn children of pregnant women can be exposed to methylmercury if their mothers consume those fish.

43. How much of our nation's mercury air emissions come from the natural environment, vs manmade emissions? Please provide peer-reviewed data and sources for this answer.

J.M.Pacynaetal.:Current and future levels of mercury atmospheric pollution on a global scale, Atmos. Chem. Phys., 16, 12495–12511, 2016, indicates that approximately 30% of worldwide mercury emissions are manmade and 70% come from primary natural mercury emissions and re-emissions.

44. Mr. Pruitt, do you understand that EPA's data show that power plants emit not only 50 percent of all US emissions of mercury, but that they also emit 82% of hydrochloric acid gas, 62% of hydrofluoric acid gas as well as many listed heavy metals, which are emitted as particulate matter, including Selenium (83% of domestic emissions), Nickel (28% of domestic emissions), Arsenic (62% of domestic emissions), Chromium (22% of domestic emissions), and others? The cite for those statistics is found in EPA's record at 76 Fed. Reg. Page 25006 Table 5. Given that Section 112(d) as interpreted by the US Courts for many years requires the regulation of all listed hazardous air pollutants from listed industries, would you not agree that power plant hazardous air pollutants must all be regulated under the technology based requirements of section 112(d)?

The Mercury and Air Toxics Standard has not been vacated by the Supreme Court or the D.C. Circuit and currently regulates both mercury and other air toxics. If confirmed, I will enforce the Mercury Air Toxics Rule so long as that Rule remains in force.

45. Given that the statute requires a showing that not one power plant emits hazardous air pollutants in amounts greater than required to cause a lifetime risk of cancer greater than one in a million to the most exposed persons, and for non-carcinogenic air toxics, to exceed a level which is adequate to protect public health with an ample margin of safety and no adverse environmental effects, and given that EPA's long standing record shows that the coal- and oil-fired power industry cannot make either of those showings what other regulatory mechanism do you believe is available "under section 112"?

AMERICAN OVERSIGHT

The Mercury and Air Toxics Standard has not been vacated by the Supreme Court or the D.C. Circuit and currently regulates both mercury and other air toxics. If confirmed, I will enforce Mercury Air Toxics Rule so long as that Rule remains in force. If I am confirmed as Administrator and am presented with information showing that EPA has discretion to regulate power plants in a manner that is consistent with the Clean Air Act but that differs from the Mercury and Air Toxics Standard, or that power plants meet the standard for de-listing under Section 1129c)(9), I would consider that matter in due course as I would consider any other matter under my jurisdiction in due course.

46. The joint brief filed by your state and the regulated industry in the most recent round of appeals of EPA's decision making on power plant air toxics suggests that you are not aware of recent court precedent upholding EPA's evaluation of all the benefits, including so-called 'co-benefits' of EPA's rulemaking on particulate matter reductions that would be the direct result of the rule. What is your position on the importance of judicial precedent in governing the Agency's actions under the same statutes as have been previously interpreted by the courts?

If confirmed, I would faithfully comply the Clean Air Act in accordance with congressional intent. Judicial precedent is undoubtedly an important guide to congressional intent but Congress has also delegated interpretive authority to the Administrator of the Clean Air Act, consistent with judicial review. If I am confirmed as Administrator and form the judgment that a judicial decision is incorrect, I would consider seeking an appeal or petition for certiorari to the Supreme Court seeking reversal of that decision. Likewise, EPA recently promulgated regional consistency regulations that address the implication of adverse federal court decisions that result from challenges to locally or regionally applicable actions and I would exercise my discretion under those regional consistency regulations unless and until they are changed.

47. As I am sure you are aware, the US Supreme Court has expressly declined to consider whether EPA should have chosen some other mechanism "under section 112" in regulating power plant mercury and all the other HAPs emitted by the industry. What is your position on that precedent?

In the White Stallion decision, the D.C. Circuit held that EPA's interpretation of Section 112(n) that Sections 112(c) and -(d) provided the appropriate mechanism for regulating power plants under Section 112 after the appropriate and necessary determination was made was entitled to deference. As your question indicates, the Supreme Court did not grant

AMERICAN OVERSIGHT

discretionary review of that question. So long as the White Stallion decision is not reversed by the D.C. Circuit and the underlying agency action is not vacated, it remains a valid judicial precedent on this point.

48. Given that you have been actively suing the EPA over the Mercury and Air Toxics Rule and have one pending lawsuit, will you recuse yourself from participating in any decision making that may reopen the EPA's decision regarding the fact that it is "necessary and appropriate" to regulate power plants under Section 112 of the Clean Air Act?

As I stated in my testimony to the Committee, I will follow the advice of EPA Ethics Counsel in all recusal matters.

49. If confirmed, will you continue with EPA's assertion that it is "necessary and appropriate" to regulate mercury and other hazardous air pollutants from power plants under Section 112 – specifically under the technology based maximum achievable control requirements of Section 112(d)?

The Mercury and Air Toxics Standard has not been vacated by the Supreme Court or the D.C. Circuit and currently regulates both mercury and other air toxics. As Administrator, I will enforce all aspects of the Mercury Air Toxics Rule so long as that Rule remains in force.

50. Do you agree with the Whitman v. American Trucking Associations, Inc., 531 U.S. 457 (2001) decision written by Justice Antonin Scalia that states that the EPA cannot consider implementation costs when setting primary and secondary National Ambient Air Quality Standards? If you do not agree, please explain.

As I stated in my testimony to Congress, there are instances where consideration of costs is not a factor. Setting the NAAQS for criteria pollutants is one such instance.

51. In 2015, you stated that in implementing the tighter ozone NAAQS, the EPA "failed to achieve the goals to protect air quality; the agency did not "articulate how the rule would further protect public health"; and was another "attempt by the administration to use executive agencies like the EPA to bypass Congress." Can you please explain what you meant by these statements?

Based on the limited information in the question, the source or context of the quote to which the questions refers is not readily apparent. Oklahoma

AMERICAN OVERSIGHT

joined four other states in a petition for review of EPA's 2015 decision to lower the National Ambient Air Quality Standard for ozone from 75 ppb to 70 ppb. The legal question raised by the state petitioners in the case is whether EPA set the standard at a level than can be achieved by states given the background concentrations and uncontrollable sources of ozone in many parts of the country. The briefs filed by the many State petitioners to that rule fully explain the States' position and speak for themselves. The case remains pending before the U.S. Court of Appeals for the District of Columbia Circuit.

52. As many of my colleagues know, I am an avid runner. I especially love to run with my 22-year son, who is a triathlete. In Delaware during the summer, we often have code orange days warning about the high levels of ozone for that day. Can you take a minute or two to describe how high levels of ozone could damage my lungs if I were to take a long run during a code orange day? Does ozone pollution cross state boundaries? If confirmed, how would you direct states to work together to reduce ozone pollution?

As I indicated at my nomination hearing, the Cross-State Air Pollution Rule is important, as pollution does cross state boundaries. An upwind state that contributes to a downwind state's inability to meet air quality standards should take responsibility.

53. In 2013, you argued that the EPA's decision to impose a Federal Implementation Plan on Oklahoma to address Regional Haze would cost more than $1 billion over five years. It is three years later. Do you still agree with this cost assessment? If not, why not?

The cost estimates referenced in this question were developed in connection with the Oklahoma State Implementation Plan that EPA rejected and EPA's subsequent decision to implement a Federal Implementation Plan. Oklahoma and a state utility filed legal challenges against the Federal Implementation Plan decision. The 10th Circuit initially stayed the rule pending judicial review. A split panel of the 10th Circuit upheld the Federal Implementation Plan in 2013. As Attorney General, I have not had reason to revisit the specific cost estimate at issue in this case.

If I am confirmed as Administrator, I will use my best efforts to hold to the five-year NAAQS review period prescribed by the Clean Air Act.

AMERICAN OVERSIGHT

54.If confirmed, will you continue to hold to the five-year National Ambient Air Quality Standards review time period that the Clean Air Act requires of the EPA?

If I am confirmed as Administrator, I will use my best efforts to hold to the five-year NAAQS review period prescribed by the Clean Air Act.

55. In previous hearings in this committee, we have had a few economists testify questioning EPA's science linking small particle pollution to negative health impacts. Can you just take a moment and talk about what you know about small particles and how they impact our lungs? Is the science robust in this area?

The science linking adverse health impacts and fine particulate matter pollution is well established. Accordingly, EPA has promulgated a National Ambient Air Quality Standard for particulate matter pollution that limits the concentration of small particulates, including those smaller than 2.5 microns, in the ambient air that at the level that the agency has determined is requisite to protect public health and welfare from adverse effects, while allowing an adequate margin of safety.

56. Mr. Pruitt, Section 109 of the Clean Air Act is very clear. It requires EPA to review the NAAQS for six common air pollutants including ground-level ozone, particulate matter, sulfur dioxide, nitrogen dioxide every 5 years. The Clean Air Act requires EPA to set these standards that "are requisite to protect the public health," with "an adequate margin of safety," and secondary standard necessary to protect public welfare. The science was clear that the 2008 ozone standard was not protecting public health, so EPA was required to Act. Is that not your understanding of the Clean Air Act?

Section 109 of the Clean Air Act requires EPA to set NAAQS at the level that is requisite to protect against adverse health and welfare effects, while allowing an adequate margin of safety. The Act includes a regular review cycle for criteria pollutants.

57. The EPA updated the Cross-State Air Pollution Rule in September 2016, which is within the time period for the rule to be subject to the Congressional Review Act (CRA). As Administrator, would you support the President signing a CRA resolution of disapproval that would reject these new standards?

Although I am familiar with the update to the Cross-State Air Pollution Rule and generally familiar with the Congressional Review Act, I have not

AMERICAN OVERSIGHT

reviewed any potential legislation which may reject these new standards. If I am confirmed, I will thoroughly review any resolution of disapproval which may be filed pursuant to the Congressional Review Act on this issue.

58. Mr. Pruitt, the Clean Air Act recognizes that air pollution does not respect state boundaries and directs EPA to set minimum national standards to protect the health of the nation, including protecting downwind states.

•Do you agree that EPA should set minimum national standards?

•Do you agree that EPA must protect downwind states?

As I indicated during my nomination hearing, I believe the Cross State Air Pollution Rule is important and should be enforced by the EPA. An upwind state that contributes to a downwind state's nonattainment should take responsibility for that contribution.

59. Mr. Pruitt, my State of Delaware is a downwind state, and most of the air pollution in my state is coming from upwind states.

•Do you agree that it is EPA's role to ensure equity between where air pollution is produced and where it is received?

•Do you agree that to remedy this unfairness, the upwind states must do more to control their emissions to avoid exporting the pollution (and the costs to the health and welfare) to the downwind states?

As I indicated during my nomination hearing, I believe the Cross State Air Pollution Rule is important and should be enforced by the EPA. An upwind state that contributes to a downwind state's nonattainment should take responsibility for that contribution.

60. As you are well aware, on April 2, 2007, in Massachusetts v. EPA, 549 U.S. 497 (2007), the Supreme Court determined that sufficient information existed then for EPA to make an endangerment finding with respect to the combined emissions of six greenhouse gases from new motor vehicles and new motor vehicle engines under CAA section 202(a). On December 7, 2009, the Administrator determined that those gases/sources contribute to greenhouse gas pollution that endangers public health and welfare. How do you plan to execute your legal authority to protect the public health and welfare from greenhouse gas pollution?

The Supreme Court held that GHGs are an air pollutant under the Clean Air Act. It did not address the question of whether regulation of GHGs under the Clean Air Act is warranted. In the subsequent UARG decision, the

AMERICAN OVERSIGHT

Supreme Court cautioned EPA that there are significant limits on EPA's authority to regulate GHGs under the Clean Air Act. The unprecedented Supreme Court stay of EPA's so-called "Clean Power Plan" was predicated upon a finding that the plaintiffs in the case were likely to prevail on the merits. In light of these holdings, I will hew closely to the text and intent of the Clean Air Act when considering further regulation of GHGs under that law if confirmed as Administrator.

61. Building off Congress's work on CAFE, the Obama Administration has updated emission standards for light and heavy-duty vehicles. These rules have had very little effect on the purchase price of new vehicles, but have saved consumers millions of dollars in fuel costs, vastly improved our energy security by slowing petroleum use and reduced a lot of pollution. If confirmed, do you support further strengthening vehicle emission standards? And with your federalism view, how do states address carbon pollution from vehicles themselves?

In making each of its decisions regarding light- and heavy-duty vehicle emission standards, the EPA has made decisions based on the administrative record at hand and Congress's statutory objectives. If confirmed, I would take care to make such decisions regarding vehicle emissions standards in furtherance of Congress's statutory objectives, based on the evidence in the administrative record. With respect to federalism, the Supreme Court stressed in Massachusetts v. EPA that States play a crucially important role in promulgating vehicle emission standards under the Clean Air Act: each "State has an interest independent of and behind the titles of its citizens, in all the earth and air within its domain." To that end, "Congress has ordered EPA to protect [the States and their people] by prescribing standards applicable to the 'emission of any air pollutant from any class or classes of new motor vehicle engines, which in [the Administrator's] judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare.'" Furthermore, the Clean Air Act and other federal administrative laws give each affected State "a concomitant procedural right to challenge the rejection of its rulemaking petition as arbitrary and capricious," and the Supreme Court affords States "special solicitude" to challenge the resulting standards in court. If confirmed, I would take care to ensure that States continue to play a central role in the administrative process giving rise to the EPA's vehicle emissions standards.

62. The EPA promulgated phase two of the heavy-duty vehicles greenhouse gas emissions standards in August 2016, which is within the time period for the rule to be subject to the Congressional Review Act (CRA). As Administrator, would you support the President signing into law a CRA resolution of disapproval that would

AMERICAN OVERSIGHT

reject these new standards? What is your view of whether the EPA would be able to re-issue any heavy-duty vehicle greenhouse gas emission standards given the CRA's language that would prohibit the agency from issuing regulations that are "substantially similar?"

Although I am familiar with the regulations on heavy vehicle greenhouse gas emissions standards which were published in August 2016, I have not reviewed any potential legislation which may reject these standards. If I am confirmed, I will thoroughly review any resolution of disapproval which may be filed pursuant to the Congressional Review Act on this issue. In terms of re-issuing other heavyduty vehicle greenhouse gas emission standards, I would have to be briefed in detail on the regulations which have been published, and the provisions of the Congressional Review Act which prohibit the Agency from issuing any regulations which are substantially similar to the initial rules in order to determine what options the Agency may have in terms of proposing and finalizing additional regulations in this space.

63. As you know, the Renewable Fuels Standard, as amended by Congress in 2007, requires the blending of 36 billion gallons of renewable fuel into conventional gasoline and diesel by 2022. In order to add that many renewable fuel gallons to our fuel supply, do you agree that EPA must approve the sale of fuels blended with greater than 10-percent renewable content?

While Congress included "applicable volume" levels in the RFS statute, Congress also took care to expressly authorize the EPA Administrator to reduce volumetric requirements below the statute's default levels in light of real-world conditions from year to year. Specifically, the Administrator may waive the statute's volume requirements if he determines "that implementation of the requirement would severely harm the economy or environment of a State, a region, or the United States, or "that there is an inadequate domestic supply." The EPA already has granted such waivers based on real-world conditions in recent years and, if confirmed, I would take care to administer the statute in accordance with the statutory objectives. While no statute mandates the sale of fuels blended with greater than 10 percent renewable content, statutes do vest the Administrator with discretion to authorize a variety of fuel blends.

64. In October 2010, EPA approved the use of a 15-percent renewable fuel blend for cars built in 2007 or later. In the following January, EPA extended the use of that blend to model years 2001 to 2006. Do you support the decision by the EPA to allow 15-percent renewable fuel blends? If confirmed, would you commit to

AMERICAN OVERSIGHT

using the discretion give to you by the Clean Air Act to evaluate even higher blends?

The EPA's 2010 and 2011 decisions to grant "partial waivers" for the use of E15 fuel for some vehicles were premised upon the EPA's conclusions (based on the administrative record) regarding E15's potential impacts on exhaust emissions (both immediate and long-term), evaporative emissions, "materials compatibility," and "drivability and operability." If confirmed, I would take care to administer the law in accordance with Congress's statutory objectives and the administrative record.

65. The Renewable Fuels Standard was designed to reduce dependence on foreign oil at a time that the U.S. was importing well more than half of its demand and concerns about energy and national security were paramount. It also was designed to reduce greenhouse gas emissions from the transportation sector.

Now that the United States supplies 76 percent of its oil domestically, do you believe the program continues to have an important role in enhancing the energy and environmental security of our country?

As Congress indicated in the Energy Independence and Security Act of 2007, domestic production of renewable fuel contributes to our nation's "greater energy independence and security."

67. As you heard in my opening statement, the EPA's record demonstrates that strong environmental policies create economic opportunities. An undeniable example of this is the impact of the Renewable Fuels Standard in rural America. According to the Renewable Fuels Association, in 2015, 14.8 billion gallons of ethanol was produced, supporting 85,967 direct jobs, while net petroleum import dependence fell to just 24 percent, and would have been 32 percent without the addition of domestically produced ethanol. In addition, the Association says the use of ethanol in gasoline in 2015 reduced greenhouse gas emissions from transportation by 41.2 million metric tons — equivalent to removing 8.7 million cars from the road for an entire year. Do you agree that the Renewable Fuels Standard has supported rural economies in America while allowing for the production of cleaner transportation fuels?

I agree that the RFS's promotion of renewable fuels contributes to economic growth in agricultural communities, and promotes the production and consumption of transportation fuels providing many environmental benefits.

AMERICAN OVERSIGHT

68. Some of my colleagues believe removing the corn ethanol mandate, but keeping the advanced biofuel mandate in the RFS is the best way forward. Do you have concerns with this approach?

The RFS statute neither expressly mandates the blending of corn ethanol nor prohibits its blending. In enacting the RFS statute, Congress took care to expressly authorize the EPA Administrator to reduce the volumetric requirements below the statute's default levels, in light of real-world conditions. Specifically, Congress authorized the Administrator to waive the volume requirements if he or she determines "that implementation of the requirement would severely harm the economy or environment of a State, a region, or the United States, or "that there is an inadequate domestic supply." The EPA already has granted such waivers based on real-world conditions in recent years and, if I am confirmed, I would take care to administer the statute in accordance with the statutory objectives.

69. As you may know, in recent years we have seen significant swings in Renewable Identification Number (RINs) prices. RINs are used by the EPA to track and ensure refineries are in compliance with the Renewable Fuel Standard. Many small and mid-range refineries are having difficulties with the price spikes of the RIN prices because many are buying some, if not all, their RINs off the market. As a result, high and volatile RIN prices have had a financial impact on these refineries. As the RFS continues to be implemented, what do you believe the agency should do – if anything - to assist with RIN prices?

As I indicated in my testimony, the EPA's RIN framework is currently the subject of a pending comment period. If confirmed as Administrator, I would take care to administer the RFS program, including the RIN framework, in accordance with Congress's statutory objectives, and based on the evidence in the EPA's administrative record, as well as the expertise of EPA staff and the expertise of other federal agencies relevant to the RIN framework and affected markets. The EPA already has entered into a "memorandum of understanding" with the CFTC, "on the sharing of information available to EPA related to the functioning of renewable fuel and related markets."

70. Mr. Pruitt, do you agree that the burden should be on a chemical facility operator to show that the design and operation of the facility is as safe as possible to protect workers and the public from explosions, fires, and other releases of toxic chemicals?

AMERICAN OVERSIGHT

I believe that every American should be provided safe home and work environments and people who live or work in and around chemical facilities are no exception to that.

71. Mr. Pruitt, when there are feasible measures that chemical companies can take to prevent explosions and fires that release toxic chemicals into surrounding communities that can kill people, do you agree that the companies should take such measures?

I believe that chemical companies should take actions to prevent explosions and fires as well as other safety incidents.

72. Do you support the "not net loss of wetlands" policy? George H.W. Bush initiated this critical policy in 1988 to protect our remaining wetlands habitat and all of the critical ecological and economic functions it supports. It has been U.S. Government policy ever since.

Yes.

73. A GAO report published on December 5, 2013 found that "more than 40 years after Congress passed the Clean Water Act […] EPA reported that many of the nation's waters are still impaired, and the goals of the act are not being met. Without changes to the act's approach to nonpoint source pollution, the act's goals are likely to remain unfulfilled." If confirmed, how will you work to address surface water quality impairments, including from non-point source pollutants?

Congress did not grant EPA authority to regulate non-point sources because regulation of non-point sources is the regulation of land, a traditional state authority. Instead, Congress created a planning process under section 208 of the Clean Water Act and authorized funding for state non-point source management plans under section 319. If confirmed, I will implement the authorities granted to EPA by Congress.

74. You have attacked the Obama Administration's "Waters of the United States" regulation, objecting to "the significant negative impact such a rule would inflict on states and the landowners within their borders." Oklahoma's major streams and rivers lie within two river basins, the Red and the Arkansas, both of which flow into other states. And Oklahoma receives most of its waters from upstream neighbors, particularly Texas. Without national regulation, how would you suggest that that Oklahoma's downstream neighbors - Arkansas and Louisiana -

AMERICAN OVERSIGHT

guarantee the quality of the water that flows across their boundaries? And how would you suggest that Oklahoma protects the quality of the water that it receives from upstream neighbors like Texas? You appear to believe that the only parties with an interest in water are those within a state, not downstream neighbors. Why?

Federal jurisdiction exists over navigable water, interstate water, and tributaries that can transport pollutants to navigable waters, and jurisdiction over the interstate rivers that are the subject of your question is not in dispute.

75. Communities across the country are facing the economic and health consequences of contaminated ground water, which impacts water systems and private well owners. How will you work to ensure communities are protected from drinking contaminated ground water? How will you address and strengthen the EPA's response to groundwater contamination and ensure homeowners and water systems are taking the steps to diagnose, treat, and remediate their groundwater resources?

For drinking water wells that are public water systems, the requirements of the Safe Drinking Water Act apply and EPA has authorities to provide small systems with technical assistance through circuit rider programs. For private well owners, the WIIN Act provided authority for EPA to support a drinking water technology clearinghouse for well owners. If confirmed, I will use the authorities and resources granted by Congress to help both public water systems and well owners.

76. This question is of interest to Senator Manchin and me: We must do everything we can to ensure that every American has access to safe and clean water. West Virginia has had issues with chemicals like PFOA in our drinking water as recently as last year. In fact, the State had to ship in alternative water supplies to the city of Vienna. Martinsburg and Parkersburg also had serious challenges. And, in 2014, the Elk River Chemical Spill left 300,000 West Virginians without access to potable water, so I know Senator Manchin looks forward to working with you to promote federal clean water initiatives. He also appreciates your commitment in your meeting together to working to address these challenges. Please outline how you intend to expand efforts to promote safe drinking water and support the modernization of our nation's water infrastructure.

If confirmed, I will focus on EPA's core missions, including, as appropriate, use of EPA's emergency order authority under the Safe Drinking Water Act.

AMERICAN OVERSIGHT

I also will implement the newly revised TSCA statute to address chemicals and will continue implementation of monitoring, review, and regulation of contaminants under the SDWA if confirmed.

77. One of the tools within the Clean Water Act that communities can use to restore the quality of polluted waters is through the development and implementation of a Total Maximum Daily Load (TMDL) plan. The GAO also found that funding for TMDLs has been insufficient in meeting national needs, with more than 50% of the nation's waters being identified as impaired. Will you advocate for funding to match the needs for the TMDL program? How do you plan to support and strengthen the Total Maximum Daily Load (TMDL) regulatory framework?

If confirmed, I will support continued funding of State programs authorized under section 106 of the Clean Water Act, which states use in part for TMDL development. I also will support flexibility for state use of 106 funds to allow states to focus on priorities such as impaired waters requiring TMDLs. If confirmed, I also will support the continued development of tools to help states develop TMDLs. Finally, I would note that neither GAO nor EPA has said that 50% of the nation's waters are identified as impaired. For example, states have assessed about 32% of rivers and streams. Of those assessed waters, states have identified about 54% as impaired. That means states have data showing that 17% of rivers and streams are impaired. You cannot extrapolate the data from assessed waters to all waters because most states target their monitoring to focus on waters they have reason to believe are impaired, so they can target their resources where they are needed the most.

78. You expressed great pride in your role in resolving the Mahard Egg Farm enforcement, indicating that it demonstrates your commitment to enforce environmental law. When was the complaint in the litigation filed, and how did that date correspond to the date of the proposed consent decree? Based on your responses to these questions, how well investigated and developed was this case when you took office? Can you explain your personal involvement in either the complaint or the consent decree?

The complaint was filed on May 23, 2011. The consent decree was entered into on August 10, 2011. There was no filed case when I took office, but the matter had been investigated by the Office of Attorney General, the Oklahoma Department of Agriculture, the EPA, and the State of Texas. I authorized the filing of the case once in office. The complaint and consent decree were handled by the attorneys in the Office of Attorney General responsible for environmental matters.

AMERICAN OVERSIGHT

79. Mr. Pruitt, the Clean Water Act requires EPA to review and revise its national water quality standards for pollutants based on the best available science. EPA has proposed or finalized more stringent standards for ammonia, nutrients, selenium, and dental offices. Do you agree that these standards must be based on the best available science?

Under section 303(c)(1) of the Clean Water Act, states are required to, every three years "hold public hearings for the purpose of reviewing applicable water quality standards and, as appropriate, modifying and adopting standards." Proposed changes to state water quality standards are submitted to EPA. Under 303(c)(3), EPA is to approve the state standards if they meet the requirements of the Clean Water Act. Under section 304, EPA establishes water quality criteria that provide guidance for state water quality standards. The Clean Water Act directs EPA to review these criteria documents "from time to time" except for criteria to protect public health from pathogens in recreational coastal waters, which must be reviewed every 5 years. Unlike the Safe Drinking Water Act, the Clean Water Act does not require the use of best available science. That said, I believe it is always important to use best available science, particularly for science documents like water quality criteria documents.

80. Last Congress, our committee worked together to pass the Frank R. Lautenberg Chemical Safety for the 21st Century Act, a bill overhauling the toothless Toxic Substances Control Act, that was signed into law earlier this year. EPA is now responsible for implementing the law, which will require a significant amount of resources. If confirmed, do you commit to ensuring EPA will prioritize implementation and has sufficient resources to comply with the requirements and timelines established by Congress?

As you are likely aware, I wrote this body a letter urging passage of the Lautenberg Chemical Safety Act. If confirmed as EPA Administrator, I will take care that the Act is faithfully executed. A copy of that letter is attached.

81. Last year, the Toxic Substances Control Act was signed into law. There was little doubt that this bipartisan legislation was overdue and very necessary to protect our constituents. EPA has already announced they are fast-tracking five chemicals under the authority of the new TSCA regime. You mentioned during our meeting earlier this month that you were concerned with some of the more aggressive timelines included in this legislation. Please elaborate. Please also outline how you intend to support the Agency in ensuring they have the resources to comprehensively implement this landmark legislation.

AMERICAN OVERSIGHT

The Lautenberg Act has a number of statutory deadlines that must be met by the Agency when carrying out the law. If confirmed I fully intend to pick up the process where the previous administration left off with completing the required rulemakings and initial chemical reviews as well as subsequent prioritizations. The updated law also allowed for updating the industry user fees used to fund the program, a process started by the previous administration, and one which I intend to quickly evaluate.

82. You have publicly supported the recent updates to the TSCA law. Since this legislation pre-empts state actions, how does that align with your views on states rights and federalism? Do you agree that federal environmental laws – such as the Mercury and Air Toxics Rule, TSCA and Clean Power Plan – also provide certainty to businesses that have to do business across the country?

Article 1, Section 8, Clause 3 of the U.S. Constitution, which gives Congress the power "to regulate commerce with foreign nations, and among the several states, and with the Indian tribes." Unlike the Clean Water and Clean Air Acts which regulate pollutants TSCA regulates chemical substances manufactured for commerce in not only all 50 states but often globally. Federal preemption of states is appropriate when dealing with interstate commerce issues and the Lautenberg Act's preemption provisions comport to my views on states' rights and federalism for those reasons.

83. Do you think that companies that work in the U.S. and around the world should be able to hide chemical information here that they have given to governmental regulators elsewhere?

The Lautenberg Act amended Section 14 of TSCA to delineate a process by which to protect, review, and possibly make public chemical information. If confirmed I intend to implement the law as passed by Congress.

84. In a 2005 U.S. Senate Committee on Homeland Security and Governmental Affairs hearing, President-elect Trump publicly praised asbestos, calling it "the greatest fireproofing material ever made." Every major independent scientific organization, including the World Health Organization, the International Agency on Research for Cancer (IARC), and others, acknowledges asbestos as a known human carcinogen with no safe level of exposure. The US EPA spent years studying the dangers of asbestos, and ultimately attempted to ban most uses. Just last month, the EPA redoubled its stance on the dangerous nature of asbestos by designating it as a top-ten high-risk chemical for priority TSCA action. If confirmed, will you heed the decades of conclusive science about asbestos or

AMERICAN OVERSIGHT

will you allow the President-elect's personal opinion skew the EPA's actions on asbestos?

The Lautenberg Act has extensive requirements for risk evaluations and the use of sound science in decisions throughout the chemical review and potential regulatory process. If confirmed I will implement the law following those statutory requirements.

85. You may be aware that asbestos use has drastically declined among industries that once used it heavily, including the construction and automotive sectors, as those industries began switching to safer substitutes. As a result, one industry now accounts for 90% of all asbestos consumed in the U.S. — the chlor-alkali industry, which uses asbestos diaphragms in its chlorine manufacturing process. The chlor-alkali industry has been the only point of public pushback against an asbestos ban under TSCA, and they have asked the EPA to exempt the chlor-alkali industry's use from any regulation on asbestos. Exempting the primary user from a restriction or ban, of course, would result in negligible impact. Will you commit to ensuring that any regulation or restriction on asbestos does not allow for any exemptions for the chlor-alkali industry or any other industry?

Asbestos has been identified by the EPA as a high-priority chemical that requires a risk evaluation following the process established by the Lautenberg Act to determine whether conditions of use of the chemical substance pose an unreasonable risk. Prejudging the outcome of that risk evaluation process would not be appropriate.

86. The EPA promulgated a ban on asbestos in 1989, after a decade of research, risk evaluation, and rulemaking. In 1991, the asbestos ban was overturned by the 5th Circuit Court of Appeals on the grounds that the ban fell short of EPA's requirement to impose regulations that are "least burdensome" to industry. Under the Lautenberg Act reforms to TSCA, the EPA is now empowered to ban and regulate chemicals that are "toxic, persistent, and bioaccumulative," like asbestos, without concern for industry cost or any other non-risk factor. Will you commit to ensuring that industry concerns are not considered during the risk evaluation and rule making processes regarding asbestos?

The Lautenberg Act requires notice and comment be provided at multiple stages of the chemical review process including prior to publishing a final risk evaluation and through any potential subsequent regulatory rulemaking. This notice and comment is designed to get the input of a wide range of stakeholders to ensure sound and inclusive rulemakings and not to produce or dismiss comments from one particular entity or interest.

AMERICAN OVERSIGHT

87. On April 9, 2015, you wrote a letter in support of the Lautenberg Act reforms to TSCA. In this letter, you expressed your support for the EPA: "I believe the agency, within the boundaries of its authorities as provided by Congress, serves a valuable mission to protect human health and preserve the environment." During the writing, negotiations, and passage of the Lautenberg Act, Congress — and the sitting President — made explicitly clear their intentions that the newly empowered EPA should swiftly ban asbestos and other deadly toxins. How will you ensure the EPA is able to meet statutory TSCA deadlines set forth by Congress?

I am committed to implementing the Lautenberg Act as required by law including meeting the statutory deadlines enumerated in the law including the required rulemakings, risk evaluations, and future chemical prioritizations.

88. In your April 9, 2015 letter in support of the Lautenberg Act reforms, you specifically praised the bill's explicit protection of vulnerable populations, including workers. Asbestos is one of the leading workplace carcinogens, responsible for approximately half of all occupational cancer deaths, according to the World Health Organization (WHO). During 1999 - 2014, the CDC NIOSH National Occupational Respiratory Mortality System (NORMS) database, there were 62,956 Americans who died from mesothelioma and asbestosis. These are just two of many deadly asbestos-related diseases. Given this data and your self-expressed concern for protecting workers, will you commit now to ensuring the EPA bans the import and use of asbestos under TSCA should you be confirmed?

Asbestos has been identified by the EPA as a high-priority chemical that requires a risk evaluation following the process established by the Lautenberg Act to determine whether conditions of use of the chemical substance pose an unreasonable risk. Prejudging the outcome of that risk evaluation process would not be appropriate.

89. Your home state of Oklahoma leads the nation in pesticide-related illnesses and deaths. At a time when pesticide/herbicide usage is on the rise across the country, how would you protect American workers, consumers, and landscapes from the toxic effects of agricultural chemicals?

If confirmed as Administrator, I would faithfully execute the laws administered by EPA. I would expect to be briefed by staff before taking any action on this issue.

AMERICAN OVERSIGHT

90. What will you do to ensure EPA is conducting a transparent process regarding pesticide regulation? Please specify how you will approach notifying the public regarding pesticides in terms of notice of actions, publication of information (including studies and data) in the dockets, or timely responses to requests under the Freedom of Information Act. If you do not believe in a transparent process, why not?

If confirmed, transparency and openness will be priorities, and I will work to ensure that the pesticide registration process complies with all public notice and transparency requirements under the law.

91. In June 2016 the White House Pollinator Health Task Force, which was co-chaired by the EPA, released the Pollinator Partnership Action Plan. Do you support this plan and EPA's role in it? If not, why not? Mr. Pruitt, do you agree that vulnerable populations, like pregnant women, infants, and children, must be specifically considered in the study of the impacts of toxic chemicals on human health? Why is this important?

I am not personally familiar with the report referenced in this question. In considering the health effects of chemicals, if confirmed as Administrator, I would expect to be briefed by EPA staff before taking action and would work to ensure EPA followed all applicable legal requirements and made its decisions based on sound science. If confirmed, I would also follow legal requirements regarding the use of science and consideration of health impacts on specific subpopulations.

92. For nearly a decade, a state-permitted coal ash disposal pit in Bokoshe, OK, operated by a company named "Making Money Having Fun," has caused severe air pollution through releases of fugitive dust, which have harmed residents of the town of Bokoshe. Encompassing 458 acres, the Making Money Having Fun pit covers 259 acres of a former coal mine with enough coal ash to fill the 70-foot-deep pit and create a miniature mountain stacked 50 feet high. The site is permitted to rise another 550 feet over the next 20 years. By 2036, the coal ash pit could hold 9.2 million tons of toxic waste. Since 1998, residents have complained about the toxic dust to state regulators. Residents of Bokoshe, particularly children, have experienced extremely high rates of asthma that are linked to high levels of fugitive dust. In addition, residents experience elevated cancer rates that may be linked to the dump site. In 2011, the CBS Nightly News covered the exposure of the community to toxic dust. See http://abcnews.go.com/US/oklahoma-town-fears-cancer-asthma-linked-dump-site/story?id=13303440. In 2014, the U.S. Environmental Protection Agency acknowledged that there was a problem with fugitive dust at the site. Ash samples

AMERICAN OVERSIGHT

collected in Bokoshe contained elevated levels of the carcinogens hexavalent chromium and arsenic, among other toxic metals. The Making Money Having Fun pit is not the only unlined coal ash dump in a former mine in Oklahoma. Seven miles west of Bokoshe, in McCurtain, OK, coal ash protrudes like an iceberg from a water-soaked pit. McCurtain residents have complained about dust clouds, spurring two state notices alleging violations — one in 2011 and another in 2015. State records show seven similar coal ash dump sites permitted in the county where Bokoshe is located.

•Did the Oklahoma AG Office ever investigate the Making Money Having Fun pit for environmental violations?

•Did your office take any actions to require Making Money Having Fun to control fugitive emissions at the site?

•As Oklahoma AG, what did your office do to investigate coal ash dumps in Oklahoma for violation of environmental or health standards?

The matter you reference was handled by Oklahoma's environmental regulators at the Department of Environmental Quality.

93. Mr. Pruitt, do you believe that all citizens in the U.S. should be equally protected from the threats posed by the dumping of coal ash? Currently, communities near municipal solid waste landfills and abandoned mines where millions of tons of toxic coal ash are disposed are not protected by the new federal coal ash rule. Do you think these communities deserve equal protection from pollution of their air, water and communities from coal ash?

I do not question the importance of clean air, land, and water, and I believe all Americans should be treated equally under the law.

94. Mr. Pruitt, do you think it is important for communities to know what hazardous substances are stored and disposed in their neighborhoods? Do you think it is important for citizens to know what hazardous substances are in their drinking water? If so, as head of EPA, will you guarantee that all coal ash permit programs approved by EPA will be as protective as the federal coal ash rule, including requiring communities be kept informed regarding the condition of toxic dumpsites near their homes and the safety of their drinking water?

As discussed in my testimony, public participation and transparency will be among my priorities if confirmed as Administrator. I do not question the importance of clean drinking water. It would be inappropriate for me to prejudge an issue that may come before me for decision if I am confirmed as Administrator. If the issue comes before me, I will ensure that the issue is

AMERICAN OVERSIGHT

fully and fairly considered with input from staff, as part of a transparent process that seeks input from stakeholders, and that is consistent with EPA's statutory authorities, including the coal ash provision in the WIIN Act.

95. Mr. Pruitt, environmental justice organizations have noted that 70 percent of coal ash dumps are located in low-income, disadvantaged communities. Do you agree that these communities deserve to know if coal ash ponds are leaking toxic substances into their drinking water supplies? Do you agree that these citizens have a right to expect that their drinking water be free of pollution from coal ash impoundments?

I am not familiar with the reports referenced in the question. As my testimony indicates, if confirmed as Administrator, I will prioritize public participation and transparency. I believe all Americans should be treated equally under the law.

96. In recent years, spills, leaks and collapses of coal ash impoundments have become a greater and greater hazard to clean water. In fact, more than half of the total toxic water pollution found in America's rivers, lakes and streams comes from such impoundments. Do you believe that coal ash from power plants and other coal-burning facilities should be regulated as a hazardous pollutant, given that its chemical composition includes lead, mercury, cadmium and arsenic? What would you do as Administrator to ensure that the kinds of ash spills recently devastating Kingston, Tennessee and Dan River, North Carolina, never again occur, anywhere?

I am generally aware that EPA has recently determined that coal ash from power plants should be regulated as a non-hazardous waste under Subtitle D of the Resource Conservation and Recovery Act and supports that decision. I understand provisions of the WIIN Act recently passed by Congress and signed into law provides EPA and states additional authority concerning the regulation of coal ash through permit programs. If confirmed, I will work to ensure this new authority is implemented.

97. Mr. Pruitt, a growing body of scientific evidence has shown that people living near mountaintop removal coal mines face a number of increased health risks, including greater risk of cancer, birth defects, and premature death. If you are confirmed as EPA Administrator, how would your agency consider these health concerns?

AMERICAN OVERSIGHT

If confirmed, I would consider human health in accordance with EPA's legal authorities.

98. Mr. Pruitt, do you believe that the people who live downstream from surface coal mining operations deserve to have their sources of drinking protected from contamination from toxic chemicals such as arsenic, selenium and lead?

I strongly believe in the importance of safe drinking water, and if confirmed as Administrator, will work to implement EPA's statutory authorities in this regard.

99. Mr. Pruitt, the Manhattan Project and the Cold War triggered a boom in uranium mining in the United States. Uranium mining was carried out under the 1872 Mining Law, which did not require mining companies to clean up the mines. Abandoned uranium and other hardrock mines litter the West. These abandoned mines leach toxic chemicals, including uranium, radium, radon, and arsenic into surface and ground waters that are sources of drinking water.

•Do you agree that there is insufficient funding to address the huge problem of abandoned uranium and other hardrock mines?

•Do you agree that the 1872 Mining Law must be reformed to provide funding for the cleanup of abandoned mines?

I have not studied the issue of whether the 1872 Mining Law should be reformed or whether there is sufficient funding to address the cleanup of abandoned mines. I am generally aware of questions about whether current environmental laws inhibit the cleanup of abandoned mines by Good Samaritans, but I would expect to be briefed by staff before considering any actions on this topic.

100. The EPA is responsible for overseeing the cleanup of some of our nation's most contaminated lands. One such site is the West Lake Landfill, a Superfund site located in Bridgeton, Missouri. This site has been contaminated since 1973 when soils were mixed with residues from the Manhattan Project and used as daily cover in the landfilling operation. Local residents are rightfully concerned and frustrated by delays at the EPA in determining a proper course of action for handling this radioactive waste. In the 114th Congress the Senate unanimously passed legislation that would transfer the remediation authority for West Lake to the Army Corps of Engineers' Formerly Utilized Sites Remedial Action Program (FUSRAP). FUSRAP is already successfully overseeing the cleanup of nuclear contamination at other sites in the St. Louis area. However, as of this moment, the authority over the West Lake site remains with the EPA. Please explain your

AMERICAN OVERSIGHT

views on the EPA's authority and responsibility with regard to the cleanup of Superfund sites.

•If you are confirmed as the next EPA Administrator, would you support transferring the cleanup of sites like the West Lake Landfill to FUSRAP? Why or why not?

•If you support cleanup authority remaining with the EPA, what concrete steps would you pursue as Administrator to ensure that the agency is progressing toward a real solution at the site that protects both the environment and the health of area residents?

I am not familiar with this particular issue or the legislation that is referenced in the question, but I appreciate the interests that residents have in the efficient operation of the Superfund program and the clean up of contaminated sites in their community. It would be inappropriate for me to prejudge an issue that may come before me for decision if I am confirmed as Administrator. If the issue comes before me, I will ensure that the issue is fully and fairly considered, as part of a transparent process that seeks input from all stakeholders.

101. Do you believe that if safer technologies or chemicals are available for a facility to use, that could prevent a serious chemical disaster, that the facility should be required to implement them to save lives, prevent injuries of workers, first-responders, and community members, and prevent serious economic damages from a disaster?

I believe workplace safety is very important and any potential regulatory decisions should be carefully examined through a open and transparent process to ensure facilities are not shifting to new chemicals or technologies that improve safety in one area but shift risks to create new and potentially more serious concerns.

102. Do you believe that federal agencies like the EPA have an obligation to consult Native American tribes when actions by the agencies could impact tribal sovereignty or the tribal trust relationship?

Yes, I believe that consultation is a sound practice that should occur whenever possible.

AMERICAN OVERSIGHT

103. Indigenous communities are consistently targeted for energy extraction, nuclear waste, uranium mining and/or oil and natural gas pipelines. How will you address this moving forward?

If confirmed as Administrator, I will faithfully execute all laws enacted by Congress imposing obligations on me in this regard. Whenever possible, I will consult with Indian Tribes prior to taking actions that may affect their sovereign interests.

104. As Administrator, what steps will you take to ensure that EPA and other federal agencies are complying with Executive Order 12989 on Environmental Justice?

I am not familiar with what steps EPA has or has not taken undertaken to implement this Executive Order. If confirmed, I will work to ensure that EPA complies with all applicable Executive Orders.

105. In January 2015, EPA issued its final rule under the Resource Conservation and Recovery Act defining what is a solid waste for purposes of ensuring that the recycling of hazardous materials does not increase the risk of harm to people or the environment, known as the "Definition of Solid Waste" or "DSW" rule. As an integral part of the rulemaking on the DSW rule, EPA conducted an environmental justice analysis of the rule's protectiveness for minority and low-income populations. EPA published its detailed environmental justice analysis report on the DSW Rule with the final rule. Will you ensure that EPA conduct detailed environmental justice analysis on all significant rules that may have adverse impacts on minority and low-income populations and publish such reports along with the final rules?

I am not familiar with the environmental justice analysis referenced in this question. If confirmed, I will work to ensure EPA conducts the required analysis to support its regulatory actions in accordance with applicable statutory requirements and Executive Orders.

106. There are currently some forty pending civil enforcement actions in which EPA is discussing possible settlement terms or pursuit of litigation. In the past during a transition in power such pending actions have proceeded unimpeded. Will you follow this precedent and let them progress at their own pace or will you intervene? And, if you do opt to intervene on a case-by-case basis, what criteria will you use to determine which enforcement cases go forward and which do not?

AMERICAN OVERSIGHT

I am unfamiliar with the specific details of the actions referenced in the question. I would expect to be briefed by staff, in consultation with the Department of Justice as appropriate, before taking any action.

107. Please provide a list of all financial contributors to your attorney general and state senate campaigns, including their total donations and affiliations.

A full list of contributors to my campaigns for the state senate and attorney general may be found at the Oklahoma Ethics Commission's websites. For state campaign committees from 2002-2014, please use this site: https://www.ok.gov/ethics/public/candidate.php. For 2015 to the present, the Commission uses this site: http://guardian.ok.gov/PublicSite/SearchPages/Search.aspx?SearchTypeCodeHook=1F26BA5E-71EA-48E4-8D50-C1013E9FE0A7. Attached is a letter from the Oklahoma Ethics Commission regarding materials prior to 2002.

108. Why did you initially refuse a formal, independent audit of your office's finances from the Oklahoma State Auditor and Inspector as mandated by Oklahoma law? Please provide a copy of the findings of the 2016 audit.

I did not refuse an audit. I requested that an independent auditor conduct the audit, rather than the State Auditor. The State Auditor ultimately agreed to not participate in the audit, and the audit was completed. The results are publicly available.

109. Do you know Mr. Fount Holland of A.H. Strategies? If so, what is your relationship?

I am familiar with Mr. Holland. I have no relationship with him.

110. Do you know Continental Resources CEO Harold Hamm and if so, what is your relationship with him?

Yes. Harold Hamm is a friend.

111. You were a board member of the Rule of Law Defense Fund from November 2015 to November 2016. As a nonprofit, that organization doesn't have to disclose its donors. But the tax filings of the Koch brothers' Freedom Partners Foundation show that it contributed $175,000 of the group's $885,000 in 2014, nearly 20

AMERICAN OVERSIGHT

percentage the total. Was the Koch brothers' Freedom Partner's Foundation the largest contributor to the Rule of Law Defense Fund? Did that Foundation have any say with respect to the Fund's activities?

I have no knowledge of whether the Freedom Partners' donation was the largest contributor to Rule of Law Defense Fund. I have resigned as Chairman and as a board member, and those records are kept by the staff of Rule of Law Defense Fund. RLDF's policies at the time I was a board member were that donors did not have any say with respect to the fund's activities.

112. The Rule of Law Defense Fund is an affiliate of the Republican Attorneys General Association, which has received more than $2.25 million in funding from fossil fuel interests since 2015—money that goes primarily to help elect GOP attorneys general, according to an analysis of its activities by the Center for Media and Democracy. What are the fossil fuel-related activities of the Fund? Has the Fund supported or undertaken any public interest or environmental protection activities?

To my knowledge, RLDF has facilitated policy discussion on a wide range of issues, including many public interest and environmental protection issues, some of which may have some nexus to matters involving fossil fuels.

113. The Huffington Post reported this week that two election fundraising groups, Oklahoma Strong and Liberty 2.0, both linked to you spent at least $637,034 since the start of 2015, even though you couldn't run for re-election as Oklahoma attorney general. These groups disbursed an average of roughly $26,543 per month, both of which announced plans last week to shut down. Would you describe for the Committee where these funds went? Is the Huffington Post's characterization that these funds money went to consultants and travel correct? And what were the specific activities conducted with these funds?

I do not have any knowledge of where remaining funds from Oklahoma Strong PAC or Liberty 2.0 went after the entities closed. Both entities are managed by a staff and decisions are made independently of me.

114. Has Oklahoma Strong or Liberty 2.0 taken money from the fossil fuel industry?

This question would have to be directed to those that operate those entities.

AMERICAN OVERSIGHT

115. Has any of the special interest money gone to other Attorneys General that may or may not sue the EPA if you are confirmed?

Without additional context to help me understand your question, I cannot answer it.

116. Has any of this special interest money gone to any member of the EPW Committee that will vote on your confirmation and serve as your oversight committee in the Senate if you are confirmed?

Without additional context to help me understand your question, I cannot answer it. In any event, I have no knowledge of the fundraising activities of the members of this committee.

117. Before being confirmed, will you disclose who has contributed to the Oklahoma Strong PAC and Liberty 2.0 Super PAC?

I do not personally have records of who has contributed to Oklahoma Strong PAC or Liberty 2.0 Super PAC. That information is publicly available on campaign finance reports, and in the possession of the staff of those entities.

118. Please provide the dates and the name of every event you attended as attorney general that was hosted by energy companies, energy representatives, energy lobbyists, or political action committees (PACs) that have energy donors.

Please see attached list.

119. For each listed matter in which the State of Oklahoma has been a litigant or petitioner against the EPA, please provide any and all documents (including any and all written or electronic correspondence, audiotapes, electronic records, videotapes, photographs, telephone messages, voice mail messages, e-mails, facsimiles, daily agendas and calendars, information about meetings and/or discussions, whether in-person or over the telephone, agendas, minutes and a list of participants for those meetings and/or discussions, and transcripts and notes of any such meetings and/or discussions) from the date on which your office first began to prepare the litigation at hand, to the date of this letter, between you (or other employees of your office) and each representative of each non-

AMERICAN OVERSIGHT

governmental entity with whom you (or your office) communicated about the litigation.

In order for you to receive a comprehensive response to a voluminous request of that nature, I would direct you to make a request of the Oklahoma Attorney General's Office under the Oklahoma Open Records Act.

120. Of the total outlays from the Attorney General's office during your tenure, what percentage of your office's expenditures in Oklahoma went toward suing the federal government or challenging federal regulations?

My understanding is that less than one percent of the Office of the Attorney General's budget has been for litigation involving legal challenges to federal actions.

121. How many legal cases did your predecessor bring against industry in Oklahoma or other states for violating federal or state environmental protections? How many similar cases have you brought during your tenure? Please identify each such case brought under your tenure, the nature of the violation alleged, and the result achieved, including any penalties assessed and collected.

I do not know how many cases were brought by my predecessor. The Department of Environmental Quality is primarily responsible for implementing and enforcing environmental laws in Oklahoma. The Office of Attorney General has historically had a limited role, compared to the Department of Environmental Quality, in litigating environmental enforcement cases. Information about environmental cases attorneys in my office have litigated during my tenure is included in this response.

122. Do the Oklahoma Strong PAC and Liberty 2.0 Super PAC continue to operate from your state campaign headquarters in Tulsa? What is your connection to either of these political action committees? Do any of your former campaign employees work for either of these political action committees, if so, who and for what period of time?

It is my understanding that both entities have been wound down. I previously served as Honorary Chairman of Oklahoma Strong PAC, I have not served in any similar role with Liberty 2.0. My understanding is that there have been common vendors between Oklahoma Strong PAC and my previous campaigns, but I am not personally aware of any contracts those

AMERICAN OVERSIGHT

vendors might have with the PACs, so your question regarding the details of any such relationships would need to be directed to the PACs or the vendors.

123. How much money have fossil fuel interests given to the Republican Attorneys Generals Association during the duration of your service in the leadership of that organization?

Other issues

Records of fundraising for that organization are kept with the staff of the Republican Attorneys General Association, and are also disclosed on campaign finance reports filed by that entity. I am not aware how much money has been donated to RAGA or from whom.

124. At a time of state budget cuts in Oklahoma, why did the attorney general's office expenditures increase from $28 million to $37.5 million under your leadership?

The budget cuts you refer to relate to reductions in the appropriations that each agency receives from the Legislature. I believe the Office of Attorney General has seen its appropriation from the Legislature cut every year since 2014, culminating in an appropriation of $0 this last fiscal year. What can lead to confusion is the fact that the appropriation from the Legislature makes up only a portion of the Office of Attorney General's budget, and the Office's budget and expenditures can fluctuate greatly year over year depending on the timing of case settlements and related distributions. For example in fiscal year 2014, the Attorney General's Office distributed higher than normal case settlement funds that inflated the budget over typical levels. Conversely, that total came down in fiscal years 2015 and 2016. Thus, fluctuations such as the one assumed by your question do not accurately reflect the size of the Office's budget. In my tenure as Attorney General, the Oklahoma Office of the Attorney General streamlined legal services for dozens of agencies, returned $29 million to the General Revenue Fund, distributed mortgage settlement restitution funds to impacted citizens, strengthened tobacco enforcement, and led the Office in such a fiscally responsible manner that the Office was able to forego all $6.4 million in state-appropriated operating funds for fiscal year 2017--that in addition to the Office having its annual appropriation cut in every prior year. The Office of Attorney General was the only state agency to voluntarily do this. During my tenure, the Office assumed the statutory duties of the Human Rights Commission through our Office of Civil Rights Enforcement, strengthened tobacco settlement enforcement efforts, and launched the Solicitor General's Unit. The Office also increased by one third the number

AMERICAN OVERSIGHT

of agencies, commissions, or boards which it represents. This has led to a precipitous decline in state agency usage of costly private counsel. It is these and other efforts that have permitted the Office to contribute approximately $29 million to the General Revenue Fund over the last six years.

125. Do you think the upwind or upstream states of Oklahoma would be willing to impose more stringent environmental protections because of the adverse impacts certain activities in their state might have on Oklahomans? Have they ever done so on their own?

The Department of Environmental Quality has primary responsibility for implementing and enforcing environmental laws in Oklahoma. As Attorney General, I do not have responsibility or authority for setting environmental policy for the State and do not have the specific information at issue in this question.

126. Do your views on federalism expand beyond the EPA? For example, were you against the recently passed legislation that pre-empted states from labeling GMO foods? If not, why not?

I did not have an opinion on the GMO labeling legislation, however, I view that it is a similar matter to the Lautenberg Act reforms to TSCA which we supported despite its pre-empting state regulation, because it provides certainty nation-wide to regulations and often a consensus federal standard.

127. You campaigned in 2010 against a "one-size-fits-all strategy" towards environmental protection. That phrase is sometimes used to imply that whether American children should be adequately - or inadequately - protected against poisonous air, water and food should be based on the political jurisdiction in which they happen to live. Is that what you meant - that air and water health standards should vary from state to state? Do children's hearts or senior's lungs vary in their vulnerability to pollution between Oklahomans and Californians? Do you accept the premise at the heart of the Clean Air and Clean Water Acts that every American, wherever they live, should have a science based, legally guaranteed right to clean air, pure water and healthy food? Or do you think these decisions should be made by local politicians based on interest group lobbying?

I strongly believe in the importance of clean air, water, and land. Many of the environmental laws passed by Congress, including the Clean Air Act, are based on a framework of cooperative federalism by which states

AMERICAN OVERSIGHT

administer programs authorized or delegated by EPA in order to implement these authorities. If confirmed, I will support open and transparent regulatory processes and base decisions on sound science in accordance with EPA's legal authorities.

128. How do you plan to consider costs in reviewing national ambient air quality standards? Do you agree with Justice Scalia's opinion in Whitman v. American Trucking Associations that it is "fairly clear that [the Clean Air Act] does not permit the EPA to consider costs in setting the standards."

I agree that the Supreme Court's decision in Whitman v. American Trucking Associations confirms that the Clean Air Act does not allow the Administrator to consider costs in setting the NAAQS.

129. Do you believe that economic or cost-benefit analysis should ever be used to decide how much toxic pollution children should breathe or drink; many lives EPA should save; how many children should get cancer or asthma just because they live near a polluting factory?

As I stated in my testimony, I fundamentally believe in EPA's core mission of protecting the American people. Environmental statutes, such as the Clean Air Act and the Clean Water Act, prescribe certain instances where a cost-benefit analysis may be considered in a rulemaking. If confirmed, I commit to fully carry out EPA's core mission and follow the law as provided by Congress.

130. Every year during your tenure as Oklahoma Attorney General, the American Lung Association gave Oklahoma counties a failing grade for not meeting ozone air pollution health standards. In fact, your home town of Tulsa is ranked 18th out of 228 metropolitan areas for high alert ozone days. Are you concerned about the impacts of soot and smog pollution on Oklahoma citizens? What efforts have you undertaken as Oklahoma Attorney General to protect Oklahomans from soot and smog pollution?

While I am concerned about children's health, matters of the sort you reference would be handled by Oklahoma's environmental regulators at the Department of Environmental Quality and the Oklahoma Water Resources Board.

AMERICAN OVERSIGHT

131. If confirmed, do you commit to protecting scientific research conducted and funded by the EPA? Will you continue EPA's long-standing practice of protecting the confidentiality of health records of individual patients that participate in scientific studies?

If confirmed, it will look forward to working with EPA's scientists and the thousands of other public servants at EPA. If confirmed, I would expect to learn more about the existing practice and relevant legal authorities concerning the confidentiality of scientific data before taking action.

132. Do you agree with this statement from NASA: "97 percent or more of actively publishing climate scientists agree: Climate-warming trends over the past century are extremely likely due to human activities." If not, please explain why you do not agree.

I have no reason to disagree with NASA's statement, although I have not made any attempt to independently verify its accuracy.

133. Please provide a list of all the cases, briefs and other legal actions that your office has filed while you have served as attorney general.

Please see attached list.

134. How many legal cases have you filed, or joined others in filing, against the EPA? Please provide a full list with the outcome of each case, including those cases in which the court disagreed with your argument, agreed with your argument, and those in which the court refused to hear the matter.

Enclosed is a list of the relevant cases. The relevant court opinions, judgments, or orders are the best source of information about how these cases were disposed.

135. It is my understanding that you currently have nine cases pending against the EPA on behalf of the State of Oklahoma. Is this correct? Will you recuse yourself from participation in these cases if you are confirmed? If not, why not? Will you recuse yourself from settlement discussions? If not, why not? Will you recuse yourself from decision making on altering or revising the regulations that are impacted by these pending cases? If not, why not? What are the recusal requirements of the Oklahoma Bar Association governing similar situations?

AMERICAN OVERSIGHT

Please see attached list of cases. Immediately upon my nomination, I was walled off from all involvement in any litigation or other matters the State of Oklahoma is pursuing involving the EPA. I have disclosed relevant matters to the Office of Government Ethics and EPA ethics officials. As EPA Administrator I will recuse from participation in litigation in matters in which I represented the State of Oklahoma, unless I receive informed consent from the State of Oklahoma and the permission of relevant federal ethics officials. It is my understanding that recusal obligations do not extend to regulatory rulemaking of general applicability, which does not create a conflict under applicable rules.

136. If confirmed, do you plan on proposing or advocating for budget cuts to the EPA's FY 2018 budget? If so, in which programs would you reduce funding? Would you target the EPA's research programs? Are there areas of agency action where you believe additional financial resources are needed?

I have no first-hand knowledge of EPA's development of its FY 2018 budget request. If confirmed, I will work to ensure that the limited resources appropriated to EPA by Congress are managed wisely in pursuit of that important mission and in accordance with all applicable legal authorities.

137. It is my understanding that prior to you taking office, there was an Environmental Protection Unit within the Oklahoma Attorney General's office. Is that correct?

The Oklahoma Department of Environmental Quality is the State agency responsible for implementing and enforcing environmental laws in Oklahoma.

138. It is my understanding that after you took office, the Environmental Protection Unit within the Oklahoma Attorney General's office was eliminated. Is that correct? Can you explain why the work of this unit was discontinued? Did the work continue in another section of your office? If so, who continued to do that work and for what period of time?

My office continues to employ attorneys vested with responsibilities related to environmental protection, including the attorney who served as the lead attorney on the previous attorney general's "environmental protection unit." That attorney's responsibilities remain unchanged (he has been promoted, in fact), and he pursues exactly the kind of cases that he pursued under the previous attorney general. The only thing that changed was the internal

AMERICAN OVERSIGHT

organization of the attorneys vested with those responsibilities, because I concluded (consistent with the practices of every attorney general in the State's history but for my immediate predecessor) that it was not operationally efficient to have a separate unit for such work. Thus, I chose to house that work in the Office's Public Protection Unit and then later in the Solicitor General's Unit. As I explained in my testimony to the committee, my office continues to pursue environmental cases. I do not possess lists of cases pursued my predecessor so I cannot provide the comparative that you request. I am aware that many environmental cases take many, many years to litigate to completion, so some of the actions that my Office continues to pursue were initiated prior to my taking office. Please see attached list of cases.

139. In your cases against the EPA's Mercury and Air Toxics Rule, who served as your scientific advisor for the case?

The Office of Attorney General does not have a science advisor.

140. Please provide your definition of cooperative federalism.

Cooperative federalism occurs when the federal government works cooperatively with state and local governments to address issues of national concern. Federalism is not cooperative when the federal government mandates or coerces state and local governments into effectuating federal policies.

141. Provide examples of times the EPA has intervened and required a state to do more than the state intended and you supported the EPA's actions.

The water quality crisis in Flint is one where EPA should have acted faster in accordance with its legal authorities in consultation with the State.

142. You are quoted in an interview this past November saying "we hope there is going to be regulatory rollback...Well when you look at the EPA, and the role it's played over the last several years, there's going to be substantial change in that agency." Which EPA regulations do you believe should be rolled back? What changes do you believe should occur in the EPA? Which EPA regulations should be maintained?

Based on the limited information provided in the question, I am uncertain what interview it is referring to. However, if confirmed as Administrator, I

AMERICAN OVERSIGHT

will take my responsibility to protect human health and the environment for all Americans with the highest possible dedication and commitment. The actions undertaken by the Office of Attorney General challenging certain EPA regulations have been because EPA exceeded it legal authorities as established by Congress and interpreted by the courts. Regulations that are not on solid legal foundation and that cannot survive judicial review will not result in environmental protections.

143. In your testimony before the Senate Environment and Public Works Committee in May 2015, you stated that the EPA "has played an important role in addressing water and air quality issues that transverse state lines." Since you became attorney general, hasn't your state sued against EPA regulations that address cross-state air and water pollution? What are the most significant sources of interstate pollution and what are the most important actions the EPA can take to address them?

As my testimony indicates, I firmly believe that the EPA plays an important role in addressing interstate water and air quality issues, but it must do so within the bounds of its legal authority. The actions undertaken by the Office of Attorney General challenging certain EPA regulations have been because EPA exceeded it legal authorities as established by Congress and interpreted by the courts.

144. Do you believe the EPA has, in your words "exceeded the constraints placed upon the agency by Congress" by issuing the Mercury and Air Toxics Rule? If so, please explain.

Based on the limited information in the question, the source or context of the quote to which the question refers is not readily apparent. Twenty one states filed a petition with the Supreme Court to review EPA's Mercury Air Toxics Standards. The Supreme Court held that the EPA was required to consider costs as part of its decision whether to regulate power plants under section 112. I agree with the Supreme Court's conclusion.

145. Do you support states taking further public health protective actions beyond those required by EPA regulations?

Yes—if authorized under the law and not preempted or displaced by federal law.

AMERICAN OVERSIGHT

146. Do you agree with the EPA's legal interpretation of the Clean Water Act and share the view the agency has federal jurisdiction over wetlands and streams that impact the health of downstream navigable waters? If you do not agree, please explain.

The EPA takes a broader view of its jurisdiction under the Clean Water Act than the question suggests. A federal court appeals has held that the EPA's interpretation of its jurisdiction under the Clean Water Act is likely unlawful. I agree with that court's conclusion.

147. Would you explain the basis for your recent challenges to EPA's finding that it is appropriate and necessary to regulate the emissions of carbon dioxide and hazardous air pollutants from power plants?

The particular matters being asked about are unclear from the limited information in the question. As discussed in response to Questions 27 and 35, the state of Oklahoma, along with many other states, filed petitions for review challenging EPA regulations in matters where EPA has exceeded its statutory authority as established by Congress and interpreted by the courts. The standard for regulating under section 111 of the Clean Air Act is whether in the Administrator's judgment a category of sources "causes, or contributes significantly, to air pollution which may reasonably be anticipated to endanger public health or welfare." The standard for regulating under section 112(n) of the Clean Air Act is if "the Administrator finds such regulation is appropriate and necessary after considering the results of the study required by this subparagraph." The briefs filed by the state petitioners are the best statements of the legal arguments being made and speak for themselves.

148. As attorney general, what types of environmental justice cases have you pursued? Please provide a list of cases and outcomes. What is your view of EPA's mission in regard to environmental justice?

As discussed elsewhere in these responses, the Oklahoma Department of Environmental Quality is the state agency with primary responsibility for implementing and enforcing environmental laws in Oklahoma. As I testified, I believe the Administrator plays an important role regarding environmental justice. Attached is a list of environmental cases brought under my tenure.

AMERICAN OVERSIGHT

149. In a 2013 press statement, you stated "the evidence is clear that the current ethanol fuel mandate is unworkable." Would you explain what you meant at this time?

Based on the limited information in the question, the context of the quote referenced in the question is not readily apparent. If confirmed, my duty as EPA Administrator would be to enforce the laws passed by this body.

150. In your joint brief against the Mercury and Air Toxics Standards, it stated "human exposure to methylmercury resulting from coal fired EGUs (Electric Generating Units) is exceedingly small." What is the scientific basis for this statement? Do you continue to agree with this assessment?

Based on the limited information in the question, the source or context of the quote to which the question refers is not readily apparent. Twenty one states filed a petition with the Supreme Court to review EPA's Mercury Air Toxics Standards. The legal question in that case was a narrow one focused on whether EPA was required to consider costs before it imposed regulations on power plants under section 112 of the Clean Air Act.

151. The EPA is responsible for administering two of the nation's most important infrastructure investment programs- the Clean Water and Safe Drinking Water State Revolving Loan Funds (SRFs). Unfortunately, water and sewer infrastructure in this country continues to deteriorate and investment is sorely needed. The American Society of Civil Engineers rates our wastewater and drinking water infrastructure a "D." If confirmed, what will you do to ensure that the federal government is adequately investing in our nation's wastewater and drinking water infrastructure?

If confirmed, I will continue support for the Clean Water State Revolving Loan Funds and the new Water Infrastructure Financing Innovation Act loan program. In addition, I would continue to implement EPA's Integrated Planning Framework to provide municipalities with flexibility to prioritize actions they take to come into compliance.

AMERICAN OVERSIGHT

Senator Duckworth:

1. During your confirmation hearing, we discussed the ongoing petitions requesting EPA initiate a rulemaking to reconsider or change the regulations identifying refiners and importers of gasolines and diesel fuel as the entities responsible for complying with the annual percentage standards adopted under the Renewable Fuel Standard (RFS) program. I am specifically concerned with harmful proposals to move the point of obligation from refiners and importers to entities that blend renewable fuel into transportation fuel. Moving the point of obligation from refiners to blenders would disrupt a component of the RFS program that has worked well for the past 10 years. This harmful proposal is opposed by a broad range of stakeholders, including organizations that represent blenders, and it would undermine Congress' goal in creating the RFS program by likely decreasing the production, distribution and use of renewable fuels in the United States.

• If confirmed as EPA Administrator, will you commit to denying any petition requesting EPA change the RFS point of obligation, including requests to move the point of obligation from refiners to blenders?
• Please provide all statements you have made, whether in writing or verbally, expressing your view on the RFS point of obligation.

As I indicated in my testimony, the EPA's RIN framework is currently the subject of a pending notice-and-comment rulemaking. If confirmed as Administrator, I would take care to administer the RFS program, including the RIN framework, in accordance with Congress's statutory objectives, and based on the evidence in the EPA's administrative record, as well as the expertise of EPA staff and the expertise of other federal agencies relevant to the RIN framework and affected markets. The EPA already has entered into a "memorandum of understanding" with the CFTC, "on the sharing of information available to EPA related to the functioning of renewable fuel and related markets."

AMERICAN OVERSIGHT

Senator Gillibrand:

1.Assuming that costs should be considered in rulemakings, do you believe that externality costs – for example costs to society from impacts of a pollutant -- should be considered in addition to the financial costs of compliance?

As I stated at the hearing, costs are important in the rulemaking process and the Courts have recognized that important factor. Environmental statutes, such as the Clean Air Act, prescribe when costs should be considered in a rulemaking. If confirmed, I commit to fully follow the law as provided by Congress.

2.New York has the toughest acid rain regulations for power plants in the nation, but the acid rain that has affected the Adirondacks is predominately caused by emissions from Midwestern coal-fired power plants. The scientific data collected as part of a long-term and robust acid rain monitoring program of Adirondack lakes and streams provides the evidence that the sulfur dioxide trading program under the Clean Air Act has been a cost effective method to reduce sulfur dioxide from the atmosphere. This regulatory strategy was implemented without a detrimental economic effect. Is the regulatory strategy outlined above: strong federal standards coupled with even stronger state standards an example of the "meaningful role" you envision for EPA and the "useful role of the states?"

As I stated at the hearing, costs are very important in the rulemaking process and the Courts have recognized that important factor. Environmental statutes, such as the Clean Air Act, prescribe when costs should be considered in a rulemaking. If confirmed, I commit to fully follow the law as provided by Congress.

3.EPA promulgated the Cross State Air Pollution Rule (CSAPR) in 2011 and an update to the rule in September 2016. How will you implement CSAPR and the update rules?

The Cross-State Air Pollution Rule is a regulation that is currently in effect and, as such, constitutes a binding regulation. So long as that rule remains in force, I will faithfully execute the law and enforce obligations under it.

AMERICAN OVERSIGHT

4.What strategy will you pursue to ensure upwind emissions do not affect the ability of downwind states to meet air quality standards, per Section 110(a)(2)(D) of the Clean Air Act?

As I stated in my testimony before the Committee, I agree that the Clean Air Act gives EPA an important role in addressing interstate pollution issues, among many other things. If I am confirmed as Administrator, I will exercise my authority in this area consistent with Congress's intent in enacting the Act. Specifically with respect to Section 110(a)(2)(D) and the "good neighbor" obligations of Section 110, I intend to engage in a transparent process that will allow states to have a meaningful opportunity to understand their obligations with regard to reducing emissions that cause or contribute to nonattainment or interference with maintenance in other states through the SIP process and to act consistent with my authority under Section 110(c) if states fail to do so.

5.What is EPA's role in resolving disputes regarding the transport of pollutants between states?

As I stated in my testimony before the Committee, I agree that the Clean Air Act gives EPA an important role in addressing interstate pollution issues, among many other things. I strongly believe in states working collaboratively to address crossborder environmental challenges and did so when I was the Attorney General of Oklahoma, including negotiating a historic agreement with my Democratic counterpart in the State of Arkansas to reduce pollutants into the scenic Illinois River. As Administrator, I intend to provide assistance to states as they work collaboratively in these issues. Where the Act contemplates a more direct role for EPA, such as with respect to Section 110(a)(2)(D) and the "good neighbor" obligations of Section 110, I intend to engage in a transparent process that will allow states to have a meaningful opportunity to understand their obligations with regard to reducing emissions that cause or contribute to nonattainment or interference with maintenance in other states through the SIP process

6.What specific actions have you taken as Oklahoma Attorney General to protect Oklahoma's children from exposure to air pollution?

While I am also concerned about children's health, environmental regulation in Oklahoma is the responsibility of Oklahoma's environmental regulators at agencies like the Oklahoma Department of Environmental Quality. That agency would likely be better situated to answer your question by actions taken by the State with regard to air pollution.

AMERICAN OVERSIGHT

7. Does state sovereignty includes a state's authority to combat impacts to air and water from pollution generated in other states?

Yes.

8. The EPA Clean Air Science Advisory Committee currently fills a role that The Clean Air Act requires; this role is that of an independent scientific committee to advise the Administrator regarding any possible revisions to the national standards (NAAQS). That advisory committee has stated on record that the ozone NAAQS should be more protective than the current standards. Will you follow the advice of the advisory committee as Administrator?

I agree that the Clean Air Act assigns the advisory committee a role in advising the Administrator regarding the promulgation and revision of NAAQS. If confirmed as Administrator, I will follow a transparent process that is legally and scientifically sound in all NAAQS decisions, including consideration of the views of the advisory committee.

9. What role will the opinions of that advisory committee play in any decision-making you might have to do regarding review of and revisions to the NAAQS?

I agree that the Clean Air Act assigns the advisory committee a role in advising the Administrator regarding the promulgation and revision of NAAQS. If confirmed as Administrator, I will follow a transparent process that is legally and scientifically sound in all NAAQS decisions, including consideration of the views of the advisory committee.

10. In the April 22, 2016 State Petitioners' Opening Brief that you signed seeking to vacate EPA's primary NAAQS of 70 ppm, you wrote that "that EPA must consider the burden of a NAAQS." What did you mean by the burden of a NAAQS?

The Clean Air Act requires the Administrator to establish NAAQS that protect public health and welfare from adverse effects, allowing an adequate margin of safety, and to revise those standards as appropriate. This includes establishing NAAQS at a level that is "requisite," which the Supreme Court has interpreted as being neither more nor less stringent than necessary to protect public health. The State Petitioners' Opening Brief, particularly in Section II of the Argument portion, the part of the brief to which the quotation in your question is relevant, argues that the ozone NAAQS is arbitrary and capricious because it fails to interpret the Act in a manner that ensures the standard is "requisite." As I have explained elsewhere in my testimony to the Committee and in response to the Committee's written questions, all legal positions that I took in my capacity as Attorney General for the State of Oklahoma were in an advocacy

AMERICAN OVERSIGHT

capacity. If confirmed as Administrator, I will consider all matters presented to me with an open mind and will work to reach conclusions that are reflected in the administrative record of each matter and that comport with Congress's intent in enacting the Act.

11.What is the burden on individuals who are exposed to, and suffer health effects from, air pollution if NAAQS are not strong enough to protect public health?

The Clean Air Act requires the Administrator to establish NAAQS that protect public health and welfare from adverse effects, allowing an adequate margin of safety, and to revise those standards as appropriate. Individuals exposed to pollutant concentrations that are above the NAAQS may suffer adverse health effects, the specifics of which vary depending on the pollutant at issue.

12.How will you take into consideration the cost of pollution on human health when taking regulatory action?

As I stated in my testimony, if confirmed, my primary goal would be to protect the American people through lawful regulations. I also indicated at the hearing that costs are very important in the rulemaking process and the Courts have recognized that important factor. I understand environmental statutes, such as the Clean Air Act and Clean Water Act, prescribe when costs should be considered in the rulemaking process. If confirmed, I commit to fully follow the law as provided by Congress.

13.New York is very concerned with the interstate transport of ozone and particulate matter, which cause death and illness in our state and damages our natural resources, but also interferes with New York's ability to meet its legal obligation to attain the national standards set by EPA. Can ground-level ozone or its precursor, nitrogen oxides, can be generated in one state and reduce air quality in another state?

Yes.

14.Can fine particulate matter or its precursors, nitrogen oxides and sulfur dioxide, be generated in one state and reduce air quality in another state?

Yes.

15.EPA's regulatory impact analysis enumerated numerous important categories of mercury benefits that the agency found couldn't be monetized, such as the impacts of mercury on non-IQ neurological impacts (including developmental

AMERICAN OVERSIGHT

delays, effects on attention/behavior, effects on motor skills, effects on memory); cardiovascular impacts; genotoxic, immunologic, and other toxic effects.

•Do you agree that mercury has these impacts?

•Do you agree that the benefits of reducing these impacts are valuable?

•Do you think that avoided harms, like reducing childhood development delays, need to be monetized to count as part of a cost-benefit analysis?

•Do you agree that consideration of a monetized cost-benefit analysis that does not include these benefits because they cannot be monetized is an incomplete picture of the costs and benefits of reducing mercury emissions?

I agree that as Administrator, it is appropriate to consider both the monetized benefits of regulation and benefits that cannot be monetized. Likewise, where appropriate in light of Congress's intent in enacting each Clean Air Act provision, I agree that it is appropriate to consider both the monetized costs of regulation and any other negative impacts, regardless of whether those can be monetized. If I am confirmed as Administrator, I will exercise my authority consistent with Congress's intent in enacting the Act.

16.In your comments at the EPW nomination hearing, you claimed that your challenges to the mercury standards were entirely procedural in nature.

•In your brief challenging the original mercury standard, you asserted that "the record does not support EPA's findings that mercury, non-mercury HAP metals, and acid gas HAPs pose public health hazards." Explain how this is a procedural claim.

•In your brief challenging the original mercury standard, you asserted that "EPA's EGU MACT standards are unlawful under §112(n)(1)(A)." Explain how this is a procedural claim.

•In signing the original petitioners' brief, were you just advocating for a client? Or do you continue to believe all the positions argued in the original petitioners' brief are correct?

•In your brief challenging EPA's supplemental finding, you asserted that "EPA must consider costs in relation to benefits to justify its 'appropriate and necessary' determination." Explain how this is a procedural claim.

•In your brief challenging EPA's supplemental finding, you asserted that EPA's "'alternative' benefit-cost approach is also invalid because it is based on the 'Co-Benefits' of reducing pollutants other than HAPs." Explain how this is a procedural claim.

•In your brief challenging EPA's supplemental finding, you asserted that "EPA's refusal to consider alternative control strategies and all relevant costs, is contrary

AMERICAN OVERSIGHT

to the statute and the Supreme Court's direction." Explain how this is a procedural claim.

In my testimony, when I stated that Oklahoma's challenges were procedural in nature, I was referring to whether EPA acted consistent with law and the record in following the procedure set forth for regulating electric utility steam generating units under Section 112(n) of the Act. That procedure required EPA, taking into account certain information, to determine whether regulating the sources under Section 112 is appropriate and necessary.

17.When filing briefs for Oklahoma in the Mercury and Air Toxics Standard litigation, Clean Power Plan litigation, and other litigation against EPA that you joined as Attorney General, were you just advocating for a client? Or do you continue to believe all the positions argued in your briefs are correct?

As I stated in my testimony to the committee, all legal positions that I took in my capacity as Attorney General for the State of Oklahoma were in an advocacy capacity. If confirmed as Administrator, I will consider all matters presented to me with an open mind and will work to reach conclusions that are reflected in the administrative record of each matter and that comport with Congress's intent in enacting the Act.

18.The Great Lakes Restoration Initiative (GLRI) was launched in 2010 to accelerate efforts to protect and restore the largest system of fresh surface water in the world — the Great Lakes. EPA is a critical member and lead of the GLRI Task Force and Regional Working Group. This coordination in partnership with the states has produced unprecedented results, with GRLI resources funding over 2,000 projects to improve water quality, protecting and restoring native habitat and species, preventing and controlling invasive species, and addressing other Great Lakes environmental problems. Under your leadership, will the GLRI continue to be a top priority?

If confirmed, I will continue EPA's support for the Great Lakes Restoration Initiative, which was formally authorized by Congress in December 2016.

19.Will you support an annual appropriation of at least $300 million for the Great Lakes Restoration Initiative?

I note that $300 million has been the annual appropriation for the Great Lakes Restoration Initiative for the past several years, even though the prior Administration proposed to cut that funding to $250 million. Three hundred

AMERICAN OVERSIGHT

million also is the Congressional authorized level of funding. If confirmed, I will take into account that funding history and Congressional authorization when making recommendations to the Office of Management and Budget regarding EPA's appropriations.

20.New York is suffering from infestations of invasive species such as the emerald ash borer and zebra mussel, which have large impacts in the state. EPA has been an important ally in our efforts, and has a number of programs that fight invasive species. What is your view on EPA's role in fighting invasive species, and do you believe EPA should commit more resources, fewer resources, or about the same amount of resources to this issue?

I am not aware of the state of invasive species in New York. If confirmed, I would expect to be briefed by staff on this issue before taking any action consistent with EPA's legal authorities.

21. Does climate change have an impact on the spread of invasive species, such as the emerald ash borer, in New York State?

I am not familiar with the state of invasive species in New York.

22.Should states continue to have the sovereign authority to set their own ballast water discharge standards to protect the environment from the spread of invasive species?

The issue of federal preemption of state ballast water discharge regulations is a question for Congress, not the Administrator of the EPA. If confirmed, I will carry out the authorities granted to EPA by Congress.

23.Approximately 200 miles of the Hudson River are classified by the EPA as one of the largest Superfund sites in the country when 1.3 million pounds of PCBs were discharged by two General Electric plants into the Hudson River over a 30-year period. The EPA has required targeted dredging between 2009 and 2015. Last year, the Commissioner of the New York State Department of Environmental Conservation repeatedly advised the EPA of the State's concerns that EPA's remedy for the Hudson River left in place substantial levels of PCB contamination. The EPA is slated to release its five-year review of the project this spring. Independent and objective quantitative analyses are essential in order to determine whether the remedy is protective of human health and the environment. Will you agree to work with New York State to evaluate the sufficiency of the remedy selected in the EPA's Record of Decision?

AMERICAN OVERSIGHT

I appreciated hearing about this Superfund site in our meeting and your staff followed up with us concerning the consent decree in this situation. If confirmed, I intend for EPA to work collaboratively with New York State to assess the sufficiency of the remedy. I understand that EPA intends to provide data and analysis related to a review of the remedy to the site related to all stakeholders, including New York, federal partners, and the environmental community. I also understand the State and other stakeholders will have the opportunity to present information to EPA through that process. I confirmed, I would work to ensure that EPA's decision will be informed by such information provided through such process.

24.With regard to the Hudson River, will you thoroughly quantify the trends based on all available fish, water, and sediment data and make reasonable and conservative assumptions regarding future trends?

I believe EPA actions should be based on sound science and taken in accordance with applicable statutory requirements, including consideration such as those you identify.

25.As of 2014, New York had the third largest number of Superfund sites among all states, with 87 sites. One in four Americans lives within three miles of a contaminated disposal site that poses serious risks to human health and the environment. In recent years, EPA has allocated approximately $250 million per year for Superfund cleanup. The agency estimates that much greater amounts – from $355 million to over $600 million per year – will be needed in the future. What changes should be made to the Superfund statute to help facilitate these important clean-up projects?

If confirmed, I would expect to prioritize the cleanup of contaminated land. Prior to suggesting any legislative proposals, I would expect to be briefed by staff and to receive the views of relevant stakeholders on ways to improve the operation of the Superfund program, including any changes to its statutory authority, if confirmed.

26.Do you support restoring the tax on petroleum products that funded the Superfund trust fund, but was discontinued in 1995?

This is a matter for Congress to decide.

27.What would you do, if confirmed, to facilitate and improve Superfund clean-ups in the absence of new legislation?

If confirmed, I would expect to prioritize the cleanup of contaminated land. I would also expect to be briefed by staff and to receive the views of relevant

AMERICAN OVERSIGHT

stakeholders on ways to improve the operation of the Superfund program, absent new statutory authority, if confirmed. I also understand the Government Accountability Office and the EPA Inspector General also regularly review the operation and activities of the Superfund program, and I would expect to look to their recommendations for additional areas for improvement, if confirmed.

28.The EPA's Brownfields Program provides grants and technical assistance to assess, clean up, and reuse contaminated properties. Cleaning up and reinvesting in brownfields protects human health and the environment, reduces blight, and takes development pressures off agricultural and other working lands. Through fiscal year 2013, on average, $17.79 was leveraged for each EPA Brownfields dollar and 7.3 jobs leveraged per $100,000 of EPA brownfields funds expended on assessment, cleanup, and revolving loan fund cooperative agreements. Unfortunately, only about 1/3 of all applicants to the program are successful. Do you support expanding the resources for the Brownfields Program to adequately support these communities in need?

I am aware EPA's Brownfields program has enjoyed bipartisan support in Congress. If confirmed as Administrator, I expect cleanup of contaminated land to be among my priorities and to be briefed by staff about the Brownfields programs activities and resources before taking any action.

29.In 2005, New York State, Connecticut, and the EPA and Army Corps reached an agreement to eliminate or reduce the amount of dredged sediment dumped in the open waters of Long Island Sound. The New York State Department of Environmental Conservation and Department of State have repeatedly urged the EPA and Army Corps not to move forward with the permanent designation of an open water dumping site in Eastern Long Island Sound, raising concerns that the sediment has not been properly tested and could negatively impact the economic and environmental state of Long Island Sound, which was designated in 1987 by Congress as an Estuary Of National Significance. Will you work to enforce NYS's right to protect Long Island Sound from additional open water dumping of dredged material?

The designation by EPA of an area as a site for dredged material disposal must follow the rigorous process set forth in the Marine Protection, Research, and Sanctuaries Act to ensure protection of the environment. As I stated in my testimony before the Committee, I support following the administrative processes set forth in law, including the National Environmental Policy Act, to ensure that EPA's statutory responsibilities are fully carried out.

AMERICAN OVERSIGHT

30.Will you commit to assisting the states with determining upland alternatives to the open water disposal of dredged material?

Disposal of dredged material is not an EPA mission or responsibility. That lies with the Corps of Engineers.

31.Will you continue the Long Island Sound Study office and ensure it receives the necessary resources from EPA?

As I noted in my testimony before the Committee, I support collaborative efforts to achieve environmental protection. The Long Island Sound Study is a collaborative effort among EPA, New York, and Connecticut.
EPA's Long Island Sound Study office was authorized by Congress in 1990 under section 119 of the Clean Water Act. If confirmed, I will carry out all responsibilities given to EPA by Congress.

32.Will you support annual appropriations of at least $10 million for the EPA's Long Island Sound geographic program?

If confirmed, I will seek budgetary resources to carry out all responsibilities given to EPA by Congress. I note that the most recent appropriation for the Long Island Sound program was about $3.9 million and the most recent budget request was about $2.9 million.

33.How do you intend to handle existing EPA enforcement actions initiated prior to January 20, 2017?

I am unfamiliar with the specific details of the actions referenced in the question. I would expect to be briefed by staff, in consultation with the Department of Justice as appropriate, before taking any action.

34.Municipal landfills that are non-compliant with the Resource Conservation and Recovery Act (RCRA) have created public health and environmental problems on the island of Puerto Rico, contributing to water, ground and air contamination. How will you address non-compliant landfills in Puerto Rico?

I am not familiar with the details of this specific issues but, if confirmed as Administrator, I would expect to be briefed by staff about EPA's ongoing involvement and role at these sites. If confirmed, I expect to make cleanup of contaminated land one of my priorities. I also believe in the importance of hearing the views of all stakeholders and would welcome the opportunity to discuss this further.

AMERICAN OVERSIGHT

35.I have been working with EPA Region 2 to address the significant environment and public health crisis in the Caño Martin Peña in San Juan, Puerto Rico. As we discussed during our meeting in my office, EPA must take aggressive action to work with the Army Corps of Engineers to clean up hazardous waste, which is threatening the lives of children and families, who do not have full representation in the Congress. Will you continue EPA's aggressive push to clean up the Caño?

As discussed, I am not familiar with the details of this specific matter but, if confirmed as Administrator, I would expect to be briefed by staff about EPA's ongoing involvement and role at this site. If confirmed, I expect to make cleanup of contaminated land one of my priorities.

36.If confirmed, will you visit San Juan and tour Caño Martin Peña during your first year as Administrator?

As we discussed in your office, I would be pleased to accompany you on this trip at a mutually convenient time if I am confirmed as Administrator.

37.What is the scientific basis for sea level rise, which we have experienced along the coast of New York State?

If confirmed as Administrator, I will work to ensure EPA regulatory actions are based on the most up to date and objective scientific data, including the ever-evolving understanding of the changes in our climate and sea level rise.

38.Do you agree with the National Climate Assessment that human-induced climate change has already increased the number and strength of extreme weather events?

I am aware of the broad range of views within the scientific community regarding the relationship between human activity on changes in the climate and any resulting impact on extreme weather events. If confirmed as Administrator, I will work to ensure EPA regulatory actions are based on the most up to date and objective scientific data.

39.Why did you eliminate the environmental protection unit of the Oklahoma Attorney General's office?

My office continues to employ attorneys vested with responsibilities related to environmental protection, including the attorney who served as the lead attorney on the previous attorney general's "environmental protection unit." That attorney's responsibilities remain unchanged (he has been promoted, in fact), and he pursues exactly the kind of cases that he pursued under the

AMERICAN OVERSIGHT

previous attorney general. The only thing that changed was the internal organization of those vested with those responsibilities, because I concluded (consistent with the practices of every attorney general in the State's history but for my immediate predecessor) that it was not operationally efficient to have a separate unit for such work. Thus, I chose to house that work in the Office's Public Protection Unit and then later in the Solicitor General's Unit.

40.How may staff does the Oklahoma Attorney General's office have dedicated, full time, to enforcing federal environmental laws in Oklahoma? Do not include in that number staff working on lawsuits against the EPA.

The Office of the Attorney General's employs seven attorneys who responsibilities include environmental-related matters, with a primary focus on enforcing Oklahoma law, rather than the federal law that your question presumes. These duties substantially include representing the environmental agencies of the State of Oklahoma or providing counsel to those environmental agencies in actions they determine to pursue.

41.Perfluorooctanoic acid (PFOA) is listed as an unregulated contaminant under the Safe Drinking Water Act. PFOA was discovered in the municipal water supply and private wells in the Village of Hoosick Falls and Towns of Hoosick and Petersburgh, NY and in North Bennington, Pownal, Vermont. Perfluorooctane sulfonate (PFOS) was found in Newburgh New York.

In 2014, PFOA and PFOS were found in public drinking water wells in Horsham, Warminster, and Warrington, Pennsylvania. They were found by the federal Environmental Protection Agency, as part of the Unregulated Contaminant Monitoring Rule. The amounts of PFOA and PFOS found in the public wells in the area were among the 10 highest samples anywhere in the country based on the provisional health advisory level set by EPA in 2009.

In 2009, EPA set a provisional health advisory level of .4 parts per billion. In May, 2016, EPA set a Lifetime Health Advisory level for PFOA at 70 parts per trillion. How will you work to ensure that drinking water sources are monitored for PFOA and PFOS, particularly in small communities under 10,000 people?

If confirmed, I will carry out the authorities and responsibilities given to EPA by Congress. Congress did not make monitoring eligible for Safe Drinking Water Act State Revolving Loan Fund assistance because it is considered operation and maintenance that is local responsibility. However, Congress recently authorized a grant program to assist small and disadvantaged communities provide safe drinking water. Testing of unregulated

AMERICAN OVERSIGHT

contaminants is eligible for assistance under this authority. If funding is provided by Congress, I will carry out that program.

42.How will EPA continue to evaluate the health effects of PFOA on all communities that were exposed, in particular vulnerable populations including infants and fetuses during pregnancy?

As I stated at my confirmation hearing, PFOA is a chemical substance that the Agency should address quickly and I will look to continue evaluating the health effects of PFOA through TSCA and the Safe Drinking Water Act.

43.Will you work collaboratively with other agencies, including the Centers for Disease Control and Prevention, the National Institutes of Health, and the Department of Defense, to ensure that the public is informed about the health effects of contamination?

As I stated at my confirmation hearing I believe collaboration between federal agencies to protect and better inform the public.

44.Will you work collaboratively with states and local governments to ensure that information on PFOA and PFOS are communicated in a transparent and timely manner to the public?

Cooperative federalism and collaboration between EPA and officials at the state and local level is something I feel very strongly about and if I am confirmed I will work collaboratively with state and local governments.

45.In the absence of federal drinking water standards, what role should EPA play in assisting communities whose drinking water supplies have become contaminated by PFCs or other emerging contaminants?

Congress recently authorized a grant program to assist small and disadvantaged communities provide safe drinking water. Testing of unregulated contaminants is eligible for assistance under this authority. If confirmed and if funding is provided by Congress, I will carry out that program.

46.The latest EPA survey of capital improvement needs indicates that public water systems need to invest $384.2 billion on infrastructure improvements over 20 years to ensure the provision of safe tap water. The needs estimate generally excludes costs associated with addressing unregulated contaminants or the costs of replacing lead service lines. What funding level do you view as effective for the

AMERICAN OVERSIGHT

EPA Drinking Water State Revolving Fund (DWSRF) capitalization grant program?

The federal government offers some financial assistance but the vast majority of the Investments in public water systems will be made by the public and private entities that own and operate those systems. The Safe Drinking Water Act State Revolving Loan Funds leverage federal investment at about 1.76 to 1. That is, a federal dollar leverages about 1.76 dollars in loan assistance. The new WIFIA program can leverage federal investment at a level of up to 60 to 1. I fully support the Drinking Water SRF and would not support any cuts to that program. However, if Congress provides additional funds I am excited by the opportunities the new WIFIA program presents.

47. How would you use the "precautionary principle" to bring to bear cutting edge science on emerging contaminants to ensure decisions are technically valid, while also not delaying regulatory decisions to wait for every potential detail to be addressed when health impacts may be occurring during the delay?

If confirmed agency decisions will be based on sound science and I will work to protect health and the environment as expeditiously as possible.

48.What is your view on EPA's role in overseeing response actions undertaken by DOD at U.S. military facilities, including where PFOA, PFOS, or other PFCs may have been released?

EPA's role is governed by the statutory and regulatory authorities, including section 120 of the Comprehensive Environmental Response, Compensation and Liability Act and the National Contingency Plan.

49. As you know, Congress passed a provision in law that exempts hydraulic fracturing from the Safe Drinking Water Act. Do you think that hydraulic fracturing chemicals should be exempt or do you believe that this law has merit?

Article 1 Section 8 of the Constitution vests in Congress the authority to make our nation's laws and, if confirmed, as a member of the Executive Branch I will faithfully execute my duty to implement and enforce the laws written by Congress.

50.How will you address the disproportionate effect of environmental contamination on low-income communities of color?

AMERICAN OVERSIGHT

If confirmed, I will expect to be briefed by staff about EPA's programs and statutory authorities in this area.

AMERICAN OVERSIGHT

Senator Markey:

1. There is tremendous diversity across states in this country, and occasionally states have differences of opinion on how to approach a problem. One of the roles of the federal government is to be an arbiter among states.
• What is your philosophy on how interstate pollution conflicts should be handled?
• Should a state be able to pollute a river for which another state relies on for drinking water?
• What is the EPA's role in resolving interstate pollution conflicts?
• How would you determine when EPA should be involved in interstate pollution disputes?

As I testified in the hearing, I have pursued opportunities to address interstate environmental quality matters. One of the examples I have highlighted is the work that Arkansas Attorney General Dustin McDaniel and I took to address an enforceable water quality standard between Arkansas and Oklahoma. I have also discussed how Texas should be responsible when air quality issues affect Oklahoma and my experience with that. When negotiations among and between states breakdown EPA has a role to set environmental standards. However, that is should be a last course of action instead of the first. I believe environmental statutes are designed with states as a primary implementer. Environmental statutes envision that states have the delegated enforcement and primacy to implement and enforce environmental statutes. Only when that is not happening or when negotiations between and among states breakdown should EPA determine a dispute and only after attempting to assist states negotiate a local solution. I am fond of saying that we need national standards and neighborhood solutions. I think that should shape the work of the EPA.

2. During the hearing, you repeatedly underscored the need to make regulation "regular" for regulated entities.
• How do you reconcile that goal with the mission of EPA, which is "to protect human health and the environment"?
• If confirmed as EPA Administrator will your highest priorities be to protect human health and the environment?

As I testified, I believe in the rule of law and that process matters. I do not view these as being contrary to EPA's mission to protect human health and the environment.

AMERICAN OVERSIGHT

3. Please list any deductible or nondeductible charitable donations you made in the last three years, including, for each contribution, the name of the recipient and the amount.

I have complied with the reporting obligations from the Office of Government Ethics and the EPW Committee.

4. As attorney general, you made Freedom of Information Act (FOIA) requests, and expected a fast response. Do you commit to respond to FOIAs as quickly as possible, if you are confirmed?

If confirmed, I will commit to tasking my staff with responding to FOIA requests in a timely manner.

5. During Mr. Trump's campaign, there were reports that even volunteers were required to sign non-disclosure agreements. After his election, President-elect Trump's team demanded lists of career officials who worked on climate science issues at the Energy Department and women's and gender issues at the State Department. It is against the law to retaliate against career officials for following lawful policy directives. It is also against the law to interfere with career employees communicating with Congress. I have included a summary of these laws below.

Any suggestion that the incoming administration is targeting career officials for retaliation simply because they worked on policies that the new President disagrees with threatens to create a chilling effect on employees who are simply trying to do their jobs.

5 U.S.C. § 7211, provides that: The right of employees, individually or collectively, to petition Congress or a Member of Congress. or to furnish information to either House of Congress, or to a committee or Member thereof, may not be interfered with or denied. Pursuant to 5 U.S.C. § 2302(b)(8), it is a violation of federal law to retaliate against whistleblowers. That law states: Any employee who has authority to take, direct others to take, recommend, or approve any personnel action, shall not, with respect to such authority ... take or fail to take, or threaten to take or fail to take, a personnel action with respect to any employee or applicant for employment because of. ... (A) any disclosure of information by an employee or applicant which the employee or applicant reasonably believes evidences- (i) a violation of any law, rule, or regulation, or (ii) gross mismanagement, a gross waste of funds, an abuse of authority, or a substantial and specific danger to public health or safety, any disclosure to the Special Counsel, or to the Inspector General of an agency or another employee designated by the head of the agency to receive such disclosures, of information which the employee or applicant reasonably believes evidences a violation of any law, rule, or regulation... " In addition, pursuant to 18 U.S.C. § 1505, it is against federal law to interfere with a

AMERICAN OVERSIGHT

Congressional inquiry: Whoever corruptly, or by threats or force, or by any threatening letter or communication influences, obstructs, or impedes or endeavors to influence, obstruct, or impede the due and proper administration of the law under which any pending proceeding is being had before any department or agency of the United States, or the due and proper exercise of the power of inquiry under which any inquiry or investigation is being had by either House, or any committee of either House or any joint committee of the Congress.

• If you are confirmed, will you commit to protect the rights of all career employees of the EPA, including their right to speak with Congress?

• Will you commit to communicate employees' whistleblower rights via email to all EPA employees within a week of being sworn in?

If confirmed, I commit to protecting the rights of all EPA employees and will follow the law.

6. The President-elect appears to be planning to ignore the advice he was given by bipartisan ethics experts to divest himself from his business interests. In the United States, he has hundreds of business interests, which include everything from vineyards, golf courses, hotels and casinos. Some of these interests could be impacted by EPA regulations or enforcement actions – for example, Donald Trump's New Jersey casino flunked air pollution tests, his hotel in Chicago has had a Clean Water Act violation and his New Jersey Golf Club violated the Safe Drinking Water Act.

• Do you commit to ensure that no employee of the EPA is pressured to take - or not take - any regulatory or enforcement action or decision because that action or decision would adversely affect business interests associated with the president-elect or his family?

• Considering that the president-elect has stated he will not release his tax returns anytime soon, how will you know exactly what all of the Trump family interests are without his tax returns?

If confirmed as Administrator, I will take care that all environmental laws enacted by Congress are faithfully executed without regard to identity of the owners of any regulated business that might be affected by such execution of the laws.

7. The following series of questions relate to Title 74 Section 20i of the Oklahoma Statutes. As Attorney General of Oklahoma, you were responsible for complying with this law. For your ease of reference, Section 20i is provided below:

74 Okl. St. § 20i (2016)
§ 20i. Legal Representation of Agency or Official of Executive Branch--Contracts

AMERICAN OVERSIGHT

A. An agency or official of the executive branch may obtain legal representation by one or more attorneys by means of one of the following:

1. Employing an attorney as such if otherwise authorized by law;

2. Contracting with the Office of the Attorney General; or

3. If the Attorney General is unable to represent the agency, or official due to a conflict of interest, or the Office of the Attorney General is unable or lacks the personnel or expertise to provide the specific representation required by such agency or official, contracting with a private attorney or attorneys pursuant to this section.

B. When entering into a contract for legal representation by one or more private attorneys, an agency or official of the executive branch shall select an attorney or attorneys from a list of attorneys maintained by the Attorney General. An agency may contract for legal representation with one or more attorneys who are not on the list only when there is no attorney on the list capable of providing the specific representation and only with the approval of the Attorney General. The list shall include any attorney who desires to furnish services to an agency or official of the executive branch and who has filed a schedule of fees for services with and on a form approved by the Attorney General. An agency or official may agree to deviate from the schedule of fees only with the approval of the Attorney General.

C. Before entering into a contract for legal representation by one or more private attorneys, an agency or official of the executive branch shall furnish a copy of the proposed contract to the Attorney General and, if not fully described in the contract, notify the Attorney General of the following:

1. The nature and scope of the representation including, but not limited to, a description of any pending or anticipated litigation or of the transaction requiring representation;

2. The reason or reasons for not obtaining the representation from an attorney employed by the agency or official, if an attorney is employed by the agency or official;

3. The reason or reasons for not obtaining the representation from the Attorney General by contract;

4. The anticipated cost of the representation including the following:

a. the basis for or method of calculation of the fee including, when applicable, the hourly rate for each attorney, paralegal, legal assistant, or other person who will perform services under the contract, and

b. the basis for and method of calculation of any expenses which will be reimbursed by the agency or official under the contract; and

5. An estimate of the anticipated duration of the contract.

AMERICAN OVERSIGHT

D. Before entering into a contract for legal representation by one or more private attorneys where the agency has reason to believe that the case, transaction or matter will equal or exceed Twenty Thousand Dollars ($ 20,000.00) or after employment when it becomes apparent that the case, transaction or matter will equal or exceeds Twenty Thousand Dollars ($ 20,000.00), an agency or official of the executive branch shall obtain the approval of the Attorney General when the total cost, including fees and expenses, of all contracts relating to the same case, transaction, or matter will equal or exceed Twenty Thousand Dollars ($ 20,000.00). Any amendment, modification, or extension of a contract which, had it been a part of the original contract would have required approval by the Attorney General, shall also require approval by the Attorney General.

E. When an agency or official of the executive branch enters into a contract for professional legal services pursuant to this section, the agency shall also comply with the applicable provisions of *Section 85.41 of Title 74 of the Oklahoma Statutes.*

F. The provisions of this section shall not apply to the Oklahoma Indigent Defense System created pursuant to *Section 1355 et seq. of Title 22 of the Oklahoma Statutes.*

G. The Attorney General shall, on or before February 1 of each year, make a written report on legal representation obtained pursuant to paragraphs 2 and 3 of subsection A of this section. The report shall include a brief description of each contract, the circumstances necessitating each contract, and the amount paid or to be paid under each contract. The report shall be filed with the Governor, the President Pro Tempore of the Senate, the Speaker of the House of Representatives, the Chair of the Appropriations and Budget Committee of the House of Representatives, and the Chair of the Appropriations Committee of the Senate.

•The Oklahoma Governor considers the Office of Attorney General a state agency, and includes the Attorney General on a comprehensive list of Oklahoma state agencies available at https://www.ok.gov/portal/agency.php. Do you agree that the Office of Attorney General is an agency under Oklahoma state law? If not, please explain.

Generally speaking, the Office of Attorney General is a state agency. Whether it is an "agency" for purposes of any particular statute requires an analysis of that statute.

•Subsection G of Title 74 Section 20i of the Oklahoma Statutes requires the Attorney General to report annually on any contracts for legal representation that state agencies have entered into with private attorneys over the course of the prior year. For the avoidance of doubt, no exception is provided under Section 20i for contracts for legal representation entered into by the Attorney General with private attorneys. Do you agree that Subsection G of Title 74 Section 20i required

AMERICAN OVERSIGHT

you, as Attorney General, to report contracts for legal representation that you entered into with private attorneys over the course of the prior year? If not, please explain.

No. The purpose of Section 20i, as demonstrated by its text, is to place the Office of Attorney General in the role of approving contracts for outside counsel that other agencies wish to enter into rather than utilizing the services of the Office of Attorney General. Subsection G requires a report be made of contracts entered into "pursuant to this section," as Subsection A(3) makes clear. Because the Office of Attorney General is not required to seek permission from itself "pursuant to" that section of law, it has no applicable contracts to report pursuant to Subsection G. The Office of Attorney General has, however, routinely disclosed contracts it has entered into with outside counsel, when requests for such contracts are made.

•The last fiscal year in which payments from the Office of Attorney General to private attorneys were recorded in the report submitted pursuant to Subsection G of Title 74 Section 20i of the Oklahoma Statutes was FY 2011. No payments from the Office of Attorney General to private attorneys were recorded in the reports you filed for FY 2012, FY 2013, FY 2014, or FY 2015. As Oklahoma Attorney General, did you enter into any verbal or written contracts with private attorneys for legal representation (whether or not such contracts provided compensation to private attorneys) other than those listed in the reports you submitted for fiscal years 2011 through 2015? Please provide a brief description of each such contract you entered into, the date you entered into the contract, the circumstances necessitating the contract, and the amount—if any—paid under the contract (including details of any non-monetary benefits that you may have obtained, offered, been offered, or delivered in connection with the contract).

Yes. Such information can be requested from the Office of Attorney General through a request made pursuant to Oklahoma's Open Records Act.

•Subsection B of Title 74 Section 20i of the Oklahoma Statutes requires that—when entering into a contract for legal representation by one or more private attorneys—an agency or official of the executive branch must select an attorney or attorneys from a list maintained by the Attorney General. If there are no listed attorneys capable of providing the specific representation, then the agency must obtain the approval of the Attorney General in order to enter into the contract.

○Please describe your process, as Attorney General, for evaluating a request submitted by a state agency to enter into a contract for legal representation by a private attorney not on the approved list. Please provide any documents detailing this process (which you or your staff relied on in making such evaluations) or indicate if this process was undocumented.

AMERICAN OVERSIGHT

- Please provide any documents submitted to you by state agencies requesting approval to enter into a contract for legal representation by a private attorney not on the approved list, as well as your written responses to such requests.
- Please provide any papers documenting decisions made by you or the Office of Attorney General to enter into contracts for legal representation by private attorneys that did not originate with requests submitted to you by state agencies.
- Do you agree that Subsection B of Title 74 Section 20i required you, as Attorney General, to enter into contracts for legal representation only with private attorneys included on the list referred to in that subsection unless there were no listed attorneys capable of providing the specific representation? If not, please explain.

Such information can be requested from the Office of Attorney General through a request made pursuant to Oklahoma's Open Records Act. With regard to your question, because the Office of Attorney General maintains the referenced list, and is authorized to allow representation from attorneys not on the list, the Office of Attorney General plainly has the discretion to allow representation from attorneys not on the list.

Did you—at any time during your term as Attorney General—enter into a written or verbal contract for legal representation (whether compensated or pro bono) by one or more private attorneys not included on the list referenced in Subsection B of Title 74 Section 20i of the Oklahoma Statutes? If so, for each such contract:

- Please provide a brief description of the contract, the circumstances necessitating the contract, and the amount—if any—paid under the contract (including details on any non-monetary benefits that you may have obtained, offered, been offered, or delivered in connection with the contract).
- Please indicate if you entered into the contract with a private attorney not on the approved list because there were no attorneys on the approved list capable of providing the specific representation or for another reason. Please describe the process you followed in reaching a decision to enter into a contract with a private attorney not on the approved list. Please list the attorneys on the approved list that you considered hiring (and deemed incapable of providing the specific representation) before deciding to enter into a contract with a private attorney not on the approved list. For each attorney on the approved list that you considered and rejected, please describe the deficiencies in their capabilities that led you to reject them in favor of a private attorney not on the approved list.

Such information can be requested from the Office of Attorney General through a request made pursuant to Oklahoma's Open Records Act.

AMERICAN OVERSIGHT

•As of January 18, 2017, neither David Rivkin, Jr. (nor any other attorney employed by Baker Hostetler) appeared on the "Approved Attorney List | 20i" accessible on your website at https://www.oag.ok.gov/litigation/1917atty.nsf/wfindatty.html?OpenView.

oDid David Rivkin Jr. represent the State of Oklahoma in its Clean Power Plan case against EPA?

oTo the best of your knowledge, did David Rivkin Jr. or Baker Hostetler receive any compensation or funds from any third party in conjunction with this or any other litigation in which it represented the State of Oklahoma on your behalf? If so, please provide the names of any such third parties.

oDid you enter into a written or verbal contract for legal representation (whether compensated or pro bono) with David Rivkin, Jr. of the Washington, D.C.-based law firm Baker Hostetler? If so, please provide:
□a brief description of the contract;
□the date you entered into the contract;
□the circumstances necessitating the contract;
□the deficiencies in the capabilities of attorneys on your approved list that led you to reject them in favor of David Rivkin Jr.—an attorney not on your approved list; and
□the amount—if any—paid under the contract (including details on any non-monetary benefits that you may have obtained, offered, been offered, or delivered in connection with the contract).
oPlease list any contributions made by David Rivkin Jr. or any employee of Baker Hostetler to you, your campaign, or any organizations or entities for which you engaged in fundraising, along with the dates of such contributions.

Yes. No. Yes. Information relating to the contract can be requested from the Office of Attorney General through a request made pursuant to Oklahoma's Open Records Act. A full list of contributors to my campaigns for the state senate and attorney general may be found at the Oklahoma Ethics Commission's websites. For state campaign committees from 2002-2014, please use this site: https://www.ok.gov/ethics/public/candidate.php. For 2015 to the present, the Commission uses this site: http://guardian.ok.gov/PublicSite/SearchPages/Search.aspx?SearchTypeCodeHook=1F26BA5E-71EA-48E4-8D50-C1013E9FE0A7. Attached is a letter from the Oklahoma Ethics Commission regarding materials prior to 2002.

•During your term as Attorney General, did you ever enter into an arrangement whereby a private attorney or attorneys represented the State of Oklahoma on your behalf on a pro bono basis while being compensated by a third party? If so, please list the legal matters in which you entered into such arrangements, and, for each matter, the third party or parties that compensated the private attorneys, the amounts paid, and any monetary or non-monetary benefits that you may have

AMERICAN OVERSIGHT

obtained in connection with the arrangement. During your term as Attorney General, did you have a process in place for ensuring that any private attorneys that represented the State of Oklahoma on a pro bono basis did not receive compensation from a third party for the legal services they provided to the state? If so, please describe this process.

No. Our Office would not enter into any such agreement for representation if it believed that the attorney was not truly working pro bono, and the Office would seek assurances from the attorney that they were.

8. The Online Lenders Alliance is "a trade group for online payday and short-term lenders and the companies that steer customers to them," according to a recent Los Angeles Times article describing actions by the Consumer Financial Protection Bureau to protect consumers from misleading advertising claims made by certain members of the payday lending industry.
•Have you, your campaign, or any organizations or entities for which you engaged in fundraising ever received or solicited donations from the Online Lenders Alliance or any other trade, industry, advocacy, or other group representing companies making payday, title, installment, or short-term loans to consumers? If so, please list the amounts and dates of such donations or solicitations.

I am not aware of any such solicitations or donations.

•Have you, your campaign, or any organizations or entities for which you engaged in fundraising ever received or solicited donations from any company making payday, title, installment, or short-term loans to consumers? If so, please list the amounts and dates of such donations or solicitations.

I am not aware of any such solicitations or donations.

•Have you, your campaign, or any organizations or entities for which you engaged in fundraising ever received or solicited donations from any principal, senior executive, officer, or director of a company making payday, title, installment, or short-term loans? If so, please list the amounts and dates of such donations or solicitations.

I am not aware of any such solicitations or donations.

•Have you, your campaign, or any organizations or entities for which you engaged in fundraising ever received or solicited donations from any member of the Board of Directors of the Online Lenders Alliance? For your convenience, the members

AMERICAN OVERSIGHT

of the Board of Directors of the Online Lenders Alliance, along with their business affiliations, are listed below. For each of these individuals, please provide the amounts and dates of their donations, or, if you unsuccessfully solicited donations from them, the dates of such solicitations.

- Kim Anderson, Strategic Link Consulting
- Samantha Bentson, Cashland Online
- Kirk Chartier, Enova Financial
- Doug Clark, Axcess Financial
- Mark Curry, MacFarlane Group
- John Dalton, LeadFlash
- Steve Hotz, The Lead Group
- Clive Kinross, MoneyKey
- Glenn McKay, Selling Source, LLC.
- Bart Miller, Centrinex
- Greg Rable, FactorTrust, INC.
- Ken Rees, Elevate
- Walt Wojciechowski, MicroBilt

I am not aware of any such solicitations or donations.

•On June 16, 2015, you, as Attorney General, sent a letter to Richard Cordray, Director of the Consumer Financial Protection Bureau (hereinafter, "CFPB"), expressing concerns about certain rules the CFPB proposed to regulate payday, vehicle title, and installment lending.

- Was the text of this letter partially or substantially drafted by the Online Lenders Alliance or any other trade, industry, advocacy, or other group representing companies making payday, title, installment, or short-term loans to consumers?
- Did the Online Lenders Alliance or any other trade, industry, advocacy, or other group representing companies making payday, title, installment, or short-term loans to consumers participate in the drafting of this letter in any other way? If so, please explain.
- Did you ask the Online Lenders Alliance or any other trade, industry, advocacy, or other group representing companies making payday, title, installment, or short-term loans to consumers review or provide comments on a draft of this letter before it was sent? If so, please provide any records related to your outreach.
- Did the Online Lenders Alliance or any other trade, industry, advocacy, or other group representing companies making payday, title, installment, or short-term

AMERICAN OVERSIGHT

loans to consumers review or provide comments on a draft of this letter before it was sent? If so, please provide any communications between you or your office and any such group regarding this letter.

As far as I am aware, no as to all.

9. The Consumer Federation of America is an association of non-profit consumer organizations devoted to advancing the consumer interest through research, advocacy, and education.

•Did you ask the Consumer Federation of America or any other interest or advocacy group representing Oklahoma's consumers review or provide comments on a draft of this letter before it was sent? If so, please provide any records related to your outreach.

•Did the Consumer Federation of America or any other interest or advocacy group representing Oklahoma's consumers review or provide comments on a draft of this letter before it was sent? If so, please provide any communications between you or your office and any such group regarding this letter.

As far as I am aware, no as to all.

10. As you may know, Oklahoma has one of the highest usage rates for payday loans in the country and allows payday lenders to charge consumers interest rates of up to 390 percent on annual basis for a 14-day term loan. In November 2016, the CFPB reported that consumers in Oklahoma submitted debt collection complaints at a rate of 36 percent (higher than the 27 percent national average). In addition, the CFPB found that average monthly complaints from Oklahomans increased 17 percent from August through October 2015 (higher than the national rate of 13 percent).

•Have you, your campaign, or any organizations or entities for which you engaged in fundraising ever received or solicited donations from the Consumer Federation of America or any other interest or advocacy group representing Oklahoma's consumers? If so, please list the amounts and dates of such donations or solicitations.

•Have you, your campaign, or any organizations or entities for which you engaged in fundraising ever received or solicited donations from any member of the Board of Directors of the Consumer Federation of America? If so, please provide the amounts and dates of their donations, or, if you unsuccessfully solicited donations from them, the dates of such solicitations.

I am not aware of any such solicitations or donations.

AMERICAN OVERSIGHT

11. You have pursued at least twenty legal actions against the EPA on clean water, clean air and climate change related regulations, including multiple lawsuits that are ongoing. You have additionally criticized the EPA and its scientists on a range of scientific facts and regulations that aim to protect public health.
• Please identify EPA regulations or standards that you do support in their current form.
• In many of your legal actions and activities as Oklahoma AG, you have endorsed positions or signed letters that were drafted by oil and gas industry paid lobbyists. Please identify areas in which your views differ significantly from those of the oil and gas industry?

When negotiations among and between states breakdown EPA has a role to set environmental standards. However, that should be a last course of action instead of the first. I believe environmental statutes are designed with states as a primary implementer. Environmental statutes envision that states have the delegated enforcement and primacy to implement and enforce environmental statutes. Only when that is not happening or when negotiations between and among states breakdown should EPA determine a dispute and only after attempting to assist states negotiate a local solution. I am fond of saying that we need national standards and neighborhood solutions. I think that should shape the work of the EPA. As I also testified at the hearing, when it was appropriate to pursue legal actions or settlement negotiations specifically with the oil and natural gas industry I have done so. When considering new regulations on oil and natural gas production and practices, I have joined other co-regulators in Oklahoma advocating those changes.

12.Your Ethics Agreement states that for a one-year period, you "***will*** seek authorization to participate personally and substantially in particular matters involving specific parties in which I know the State of Oklahoma is a party or represents a party."

•Why does this language assume that you "will" seek authorizations for all such instances?

•Why is your recusal limited to a one-year period, when in some cases the "particular matters" will not be resolved within that timeframe?

•Will you commit to recusing yourself from participating in all such particular matters, without requesting or receiving a waiver, until the matter is fully resolved? If not, why not?

•These 'particular matters' are all litigation in which your Ethics Agreement contemplates you switching from plaintiff in your capacity as Attorney General of Oklahoma (in which you were a principal decision-maker on the part of those litigating against EPA), to defendant as EPA Administrator (in which you would be the principal decision-maker on the response to the lawsuit you filed). Why do

AMERICAN OVERSIGHT

you not believe this creates an unresolvable conflict of interests that makes it impossible for you to properly, lawfully and ethically represent the interests of the EPA, while simultaneously upholding your professional duty to your former client, the State of Oklahoma?

My Ethics Agreement was drafted in close consultation with ethics experts at the Office of Government Ethics and EPA ethics officials, and reflects a diligent effort to ensure that I seek authorization before participating in any matter involving specific parties in which I know the State of Oklahoma is a party or represents a party for one year after my resignation as Oklahoma Attorney General. I believe you may be misreading the language in my Ethics Agreement regarding prior authorization. If, during the relevant time period, I would like to consider participating in a particular matter involving specific parties in which I know the State of Oklahoma is a party or represents a party, I will seek advance authorization to do so. With respect to my professional obligations as a member of the bar, I am not permitted to "switch sides" as counsel in any matter in which I participated as a lawyer. The standards that would apply to me as EPA Administrator are different, however, as I will not be representing the EPA as a lawyer if I am confirmed.

13. During the hearing, you refused to unequivocally recuse yourself from litigation that you brought against the EPA, repeatedly stating that you would follow the direction of agency ethics officials' guidance in this area on a case-by-case basis. Isn't it true that if you are confirmed, the agency ethics officials that you are referring to will report to you, and this reporting relationship could be perceived to have the potential to influence the guidance they provide you with? In light of this, will you commit to the modification of your Ethics Agreement, using your own discretion and authority to do so and prior to any vote on your confirmation, in order to provide more clarity about your intentions for recusal related to each matter involving specific parties in which the State of Oklahoma is a party? If not, why not?

My Ethics Agreement was drafted in close consultation with ethics experts at the Office of Government Ethics and EPA ethics officials, and reflects a diligent effort to ensure I comply with all applicable federal ethics rules. I will abide by the commitment I made in that letter. I am confident in the former staff of the EPA and have no reason to believe they will give me anything other than their best advice on ethics matters. Moreover, not all officials who may consider a request for authorization to participate in a matter will necessarily report to me. Before participating in matters involving specific parties in which I am concerned where there may be a question regarding my impartiality, I would expect, where they deem it appropriate, that EPA ethics officials may consult with ethics experts at OGE before making a recommendation.

AMERICAN OVERSIGHT

14.I am attaching a January 17, 2017 letter from Citizens for Responsibility and Ethics in Washington (CREW) and a January 18, 2017 letter from The Campaign Legal Center (CLC), both sent to the EPA Designated Agency Ethics Official, for the record and for your review. The CREW letter references several factors related to your refusal to unequivocally recuse yourself from participating in any of these matters as EPA Administrator that would cause a reasonable person with knowledge of the relevant facts "to question his [your] impartiality in these matters" and "to question the integrity of the agency's programs and operations." The CLC letter states that "the plan described in his [your] ethics agreement is insufficient to avoid actual or apparent conflicts of interest, and would cause members of the public to question his impartiality in the conduct of his [your] duties, contrary to his [your] obligation to "ensure that every citizen can have complete confidence in the integrity of the Federal Government.""

•The CREW letter states that ethics regulations demand your recusal from participating personally and substantially as Administrator in particular matters involving specific parties in which the State of Oklahoma is a party, even if the State of Oklahoma withdraws from the matter. Do you agree to make such a recusal for each such matter, even if the State of Oklahoma withdraws from the matter? If not, why not?

•The CREW letter states that "there would be serious and apparent conflicts leading to reasonable doubts about Mr. Pruitt's impartiality if he were to participate in these lawsuits as EPA Administrator *at any point* in their lifetime. It is therefore essential that Mr. Pruitt's recusals last through the full course of each matter." Do you agree to recuse yourself for the full course of each matter involving specific parties in which the State of Oklahoma is a party? If not, why not?

•The CREW letter states that any waiver request you might make from recusal from any of these matters "should be denied based on consideration of the relevant factors listed under" 5 C.F.R. 2635.502(d). Do you agree not to request a waiver from recusal from any such matter? If not, why don't you agree with the analysis of the factors listed in the regulations as they apply to your past litigation history against the Agency that CREW described in the letter should result in a denial of the waiver request?

As discussed above, my Ethics Agreement was drafted in close consultation with ethics experts at the Office of Government Ethics and EPA ethics officials, and reflects a diligent effort to ensure I comply with all applicable federal ethics rules. If confirmed, I will ask relevant federal ethics officials to fully review the issues raised in the CREW letter and, if appropriate, take them into account in determining the proper legal course of action in particular instances.

AMERICAN OVERSIGHT

15.Some of the legal cases that you brought against the agency remain open, and there may be legal decisions that require EPA regulatory action as they are resolved; for example, a court could uphold the EPA regulation and require it to be enforced, or a court could direct such a regulation's revision. Since such regulatory actions would be a direct consequence of the litigation, any conflict of interests associated with your participating in the legal matter should extend to any EPA regulatory or enforcement action taken as a result of court action on the litigation. Do you agree to recuse yourself without waiver and for the entirety of your tenure at the EPA from all such regulatory or enforcement actions that are taken as a result of court action on a specific legal matter from which you were recused? If not, why not?

As EPA Administrator I will recuse from participation in litigation in matters in which I represented the State of Oklahoma, unless I receive informed consent from the State of Oklahoma and the permission of relevant federal ethics officials. It is my understanding that recusal obligations do not extend to regulatory rulemaking of general applicability, which does not create a conflict under applicable rules.

16.If you are confirmed, you will also have the ability to accomplish through *regulation* as EPA Administrator what you have been seeking to accomplish through *litigation* as Attorney General. For example, instead of waiting for a court to decide whether to grant your lawsuit's request to overturn EPA's smog standard, you could start to write a regulation to do just that on your very first day on the job. Will you commit to recuse yourself from working on the revision or elimination of any *regulation* regarding issues on which you have sued the EPA? If not, why not?

It is my understanding under federal ethics rules that regulatory rulemaking of general applicability does not create a conflict.

17. I am also attaching, for the record and for your review, the Ethics Agreement signed by Carol Browner, former EPA Administrator during the Clinton Administration. In her Ethics Agreement, she agreed to recuse herself from participating "personally and substantially in any EPA matter which involves the State of Florida as a specific party and in which I was personally and substantially involved as Secretary, Department of Environmental Regulations, State of Florida". I note that this agreement was not limited to one year in duration and not subject to waivers. I am also attaching, for the record and for your review, the Obama Administration Ethics Pledge that each nominee agreed to uphold, which states, in part, "I will not for a period of 2 years from the date of my appointment participate in any particular matter involving specific parties that is directly and substantially related to my former employer or former clients, including regulations and contracts." If the response to any part of questions 2, 3 or 4 is no, please

AMERICAN OVERSIGHT

also explain why in light of the stronger Ethics Agreements and pledges made by past EPA Administrators?

I am not familiar with the facts and circumstances surrounding Ms. Browner's Ethics Agreement. In my Ethics Agreement, which was drafted in close consultation with ethics experts at the Office of Government Ethics and EPA ethics officials, I agreed to abide by federal regulations that require my recusal from particular matters involving specific parties in which the State of Oklahoma is a party for a period of one year after my resignation as Attorney General, unless I receive a waiver. I will abide by the commitment in that letter, in addition to any other obligations imposed by the Trump Administration as well as my obligations as a member of the bar.

18. In addition to your participation in specific litigation and regulatory matters that raise conflicts of interests, there may be pending enforcement matters at EPA in which donors to you or your political action committees are the subjects. For example, records indicate that Tyson Foods has been the subject of an EPA Clean Air Act enforcement action[3] and reportedly "faces an ongoing criminal investigation by the EPA for its release of toxic pollutants into waterways".[4] Do you commit to recusing yourself from participation in any enforcement matter in which the subject is an entity that has previously made a donation to you or any of your political action committees? If not, why not?

I will consult with relevant federal ethics officials to determine whether to participate in a particular matter.

19. *Miss. Comm'n on Envtl. Quality v. EPA*, 790 F.3d 138 (D.C. Cir. 2015) stated that "Decisionmakers violate the Due Process Clause and must be disqualified . . . when they act with an 'unalterably closed mind.'" One of your filings stated that the agency's record "does not support EPA's findings that mercury, non-mercury HAP metals, and acid gas HAPs pose public health hazards." Do you have an "unalterably closed mind" on the question of whether mercury and acid gas HAPs pose public health hazards? If not, please explain your current view on this question.

As I stated in my testimony to the committee, all legal positions that I took in my capacity as Attorney General for the State of Oklahoma were in my capacity as an advocate. If confirmed as Administrator, I will consider all

---

[4] http://www.meatpoultry.com/articles/news_home/Business/2016/08/Tyson_investors_call_for_envir.aspx?ID=%7B4E28BCD7-045D-489C-8A41-48A6DDDBE99F%7D&cck=1

AMERICAN OVERSIGHT

matters presented to me with an open mind and will work to reach conclusions that are reflected in the administrative record of each matter and that comport with Congress's intent in enacting the Act.

20. Section 301(a) of the Clean Air Act prohibits the Administrator from delegating authority over many regulatory proceedings. To the extent that you are recused from participating in such decisions, who could lawfully make them?

If I am recused from participating in a matter, the Federal Vacancies Reform Act and other federal law provide a mechanism for another EPA official to perform such functions in an acting capacity. Under current policy, the EPA Deputy Administrator would typically serve this function.

21.Each case in which you litigated on behalf of your former client requested that the court compel EPA to take a specific action; for example, one pending suit asks a court to compel EPA to maintain the ozone standard at 75 ppb instead of lowering it to 70 ppb. A court may direct EPA to take specific actions as these cases are resolved, which will require changes to EPA regulations. Moreover, as EPA Administrator, you could simply direct the Agency to amend its regulations to do the very thing your lawsuit asked a court to do in the first place. This also creates an unresolvable conflict of interests.
• Will you recuse yourself, without waiver and for the entirety of your tenure as EPA Administrator, from any agency proceedings that a) directly result from the resolution of or b) are related to the "particular matters" that your Ethics Agreement agrees you should be recused from? If not, why not, and why do you not believe that such agency proceedings would be covered by your recusal under the applicable Standards of Ethical Conduct for Employees of the Executive Branch?

As EPA Administrator I will recuse from participation in litigation in matters in which I represented the State of Oklahoma, unless I receive informed consent from the State of Oklahoma and the permission of relevant federal ethics officials. I understand that this does not extend to regulatory rulemaking of general applicability, which would not create a conflict under applicable rules.

22. Our oceans are essential for life, and much of what happens on land ultimately ends up in our oceans. There are many ways in which our actions on land can both positively and negatively affect marine life and the marine environment. Under the Marine Protection, Research and Sanctuaries Act (MPRSA), the EPA ensures that harmful substances are not dumped into the

AMERICAN OVERSIGHT

marine environment. Additionally, reducing ocean pollution is a global goal in which the U.S. is an active participant.
• In your opinion, what role does the EPA have in protecting our oceans and the marine life within?
• How specifically will the EPA, under your administration, ensure that harmful manmade substances do not end up in our oceans?
• How will the EPA continue to ensure the U.S. is a leader in reducing ocean pollution, and assisting other countries in reducing pollution that makes it into our oceans?

If confirmed, I will carry out the authorities and responsibilities given to EPA by Congress. These include responsibilities under the Marine Protection, Research and Sanctuaries Act.

23.The greenhouse gas effect traps outgoing longwave radiation causing a radiative imbalance of Earth, ultimately leading to the warming of the globe. The fundamental physics of climate change are well settled.
•Are you aware of the theory of radiative balance of the Earth? Can you briefly describe it?
•Do you understand Planck's law and the difference between shortwave vs. longwave radiation, and how that relates to Earth's energy balance?
•Do you agree that disturbances to this equilibrium can warm or cool the Earth?
•Are you aware of the atmospheric circulation and oceanic currents that transport heat from the Equator to the poles?
•Due to the complexity of the climate system, there are lag times between changes in certain conditions, such as the amount of carbon dioxide in the atmosphere, and other observable changes, such as the temperature of the deep ocean. If an action by the United States or world today, could positively or negative benefit the future, say 50 to 100 years down the road, is that an important consideration?
•Are you aware that there is less ice on land in such places as Antarctica and Greenland than in previous years since the Industrial Revolution? What do you believe is causing this decrease in mass of ice on land?
•To where do you believe the water from ice melt on land goes, and do you believe that could cause global sea levels to rise?
•Do you disagree that additional greenhouse gases in Earth's atmosphere, such as carbon dioxide, will cause a smaller magnitude outgoing longwave radiation to escape to space? Please explain.
•Do you disagree that the burning of fossil fuels, such as oil or natural gas, cause carbon dioxide to be released into the atmosphere? Please explain.
•Do you disagree that if fossil fuels were not extracted and burned, less carbon dioxide would be released into the atmosphere? Please explain.
•Therefore, is it possible, if not probable, that humans releasing greenhouse gases into the atmosphere could cause more heat to be trapped by the atmosphere? Please explain.

AMERICAN OVERSIGHT

•Do you understand that the concept address is the previous question is the basis of human-caused climate change? Please explain.
•If not human burning of fossil fuels, how do you explain the observed increase in carbon dioxide in atmosphere?
•What is a safe level of carbon dioxide in the atmosphere? Please provide this number in parts per million. Please explain.
•If states want to individually take measures to curb greenhouse gas emissions will you allow them to do so? If yes, how will you support them? If not, why does the EPA have the authority to stop a state from implementing measures to curb greenhouse gases?

If confirmed, I will work to ensure that any regulatory actions are based on the most up to date and objective scientific data, including the ever-evolving understanding of the impact increasing greenhouse gases have on our changing climate. I will also adhere to the applicable statutory authorities to fulfill EPA's mission to protect human health and the environment consistent with the process and rule of law established by congress. I also believe the Administrator has an important role when it comes to the regulation of carbon dioxide, which I will fulfill consistent with *Massachusetts v. EPA* and the agency's Endangerment Finding on Greenhouse Gases respective of the applicable statutory framework established by Congress. I believe the most effective path towards achieving these objectives is through close partnership with the states granting them regulatory leeway as ascribed by the rule of law.

24. If states want to individually take measures to curb greenhouse gas emissions will you allow them to do so? If yes, how will you support them? If not, why does the EPA have the authority to stop a state from implementing measures to curb greenhouse gases?

Yes, states are free to pursue regulatory measures to address greenhouse gas emissions under state legal authority.

25.A recently released report by *Solar Power Rocks* gave Oklahoma a grade of "F" and found that the "solar industry has been stymied at every turn."
•The length of return for a 5-kilowatt solar array installation is 16 years in Oklahoma, compared to the just 4 years in Massachusetts. Why do you believe that is the case?
•In 2014, the Oklahoma legislature passed legislation putting a surcharge on rooftop solar. Do you support this? Why or why not?

I am not familiar with "lengths of return" or the potential differences in such lengths of return between states, and thus have no opinion as to the cause

AMERICAN OVERSIGHT

of any such differences. I am not familiar with the legislation you reference, and have formulated no opinion with regard to the wisdom of it as a matter of Oklahoma policy.

26. Last week, in his nomination hearing, Rex Tillerson dismissed the importance of America being energy independent. If you are confirmed as EPA Administrator, you will oversee tailpipe standards for cars and SUVs and the renewable fuel standard, two important polices that support energy independence by reducing oil consumption in America. In your view, should achieving energy independence be a priority for America?

As Congress indicated in the Energy Independence and Security Act of 2007, domestic production of renewable fuel contributes to our nation's "greater energy independence and security." Our energy independence will best be achieved by an "all-of-the-above" strategy without the government picking winners and losers. Setting motor vehicle emissions standards is a complex task that requires careful balancing of several competing factors. Setting such standards also requires coordination with NHTSA, which continues to administer the CAFE program. I will consider the relevant factors carefully and will coordinate closely with NHTSA on any motor vehicle emissions standards that will be addressed during my tenure if I am confirmed as Administrator.

27.A cornerstone of science is impartiality and following the facts. This is what has allowed the United States to be a world leader in science.

•Do you commit to allowing EPA scientists to do their jobs and not interfere with their science?
•How will you ensure that scientists, such as those employed by EPA, are allowed to continue their work unimpeded by potential challenges due to their topic of research?
•Do you agree that only scientists and technical experts, not impeded by political influence, should edit scientific work? If not, why?
•In your opinion, what is the role that a public affairs office has in editing any potential publically available statement or information?
•Do you pledge that your all of your work as EPA Administrator will be guided by the best available science?
•Do you commit to maintaining EPA's Scientific Integrity Policy regardless of research area?

If confirmed, it will be a privilege to work with EPA scientists and the thousands of other public servants at EPA. I have no first-hand knowledge of the role of the public affairs office as referenced in the question and, if confirmed, I expect to learn more about the office. Indeed, I fully believe, as former EPA administrators have stated, that sound, objective science must

AMERICAN OVERSIGHT

serve as "the backbone" of EPA actions. I have no first-hand knowledge of the specific scientific integrity policy referenced in the question and, if confirmed, I commit to thoroughly reviewing the policy and to follow applicable laws and federal guidance regarding scientific integrity, information quality, and transparency.

28.It has been reported by *Wired* that President-elect Trump plans to undo President Obama's June 2013 Climate Action Plan, and remove materials from EPA websites. While we understand revising policies from administration to administration, the reports of removing environmental data from EPA websites is troubling. Will you commit to keeping environmental records, data, and records provided as part of previous rulemakings publically available on the EPA's website?
•Will you commit to ensuring that any current publically available dataset remains available and easy to access? If not, please explain.
•Will you ensure that all data interpretation tools available on the EPA website remain publically available and easy to access? If not, please explain.

I have not been briefed on any changes to the EPA website following the transfer of power from the Obama Administration to the Trump Administration. That being said, I commit to reviewing the materials that are included on the EPA site if I am confirmed.

*29.*I have heard that EPA's Fiscal Year 2018 budget request may include a 17% budget cut. . I am troubled by this reported planned cut to EPA budget and urge you to reconsider this drastic move. Will you maintain robust funding for scientific research at EPA, and to ensure that environmental data continues to be collected?

I have no first-hand knowledge of EPA's development of its FY 2018 budget request. If confirmed, I will work to ensure that the limited resources appropriated to EPA by Congress are managed wisely in pursuit of that important mission and in accordance with all applicable legal authorities.

30.Hydraulic fracturing (fracking) now provides more than half of the United States oil output. In 2000, fracking provided less than 2% of America oil. This has dramatically changed the energy landscape of the United States.
•Do you believe that hydraulic fracturing (or fracking) is the cause of the increased frequency and strength of earthquakes in Oklahoma? Please explain.
•As Attorney General have you taken any actions related to earthquakes caused by fracking?
•In May 2016, you testified that the decline in the coal industry was due to the price drop of natural gas and not EPA regulation. Do you stand by this statement? If not, why have your views changed?

AMERICAN OVERSIGHT

•Do you believe that fracking can contaminate drinking water supplies? Please explain.

Scientists from the state level up to the National Research Council have found that the act of hydraulic fracturing itself poses very little risk of creating seismic events. Seismicity concerns related to the oil and natural gas industries are more commonly tied to the underground injection of wastewater which is regulated by the Safe Drinking Water Act. As I stated in my testimony, in Oklahoma the Corporation Commission has jurisdiction over this matter and I have been in contact with that agency that has taken very meaningful steps to address seismic concerns. I believe that there is not one single factor that has precipitated the decline in the coal industry alone. Finally, I agree with EPA's Dr. Thomas Burke who, following the release of EPA's final hydraulic fracturing water study, reiterated that the Agency only found a small number of confirmed cases of contamination. With well over one million wells that have been hydraulically fractured in the United States the evidence found by EPA suggests a very low likelihood of drinking water contamination from hydraulic fracturing or its associated activates.

31.This past December, the EPA released a report entitled, "Hydraulic Fracturing for Oil and Gas: Impacts from the Hydraulic Fracturing Water Cycle on Drinking Water Resources in the United States." The EPA found scientific evidence that fracking activities can affect drinking water supplies.
•Have you read this report?
•What steps will you take as Administrator to reduce the possibility of drinking water contamination due to hydraulic fracturing activities?
•Of those chemicals used in hydraulic fracturing activities, the EPA found that nearly 200 might pose a public health risk. Will you commit to continuing to study these identified chemicals and the potential health risks, as well as identify other potential harmful chemicals used in hydraulic fracturing activities?

I am familiar with the report and if confirmed as EPA Administrator I will faithfully execute my legal duties to administer laws as authorized by Congress including the Safe Drinking Water Act. Understanding and studying risks to local communities is something central to the role as Administrator and I will continue to study potential risk using the Agencies many tools.

32.Do you agree the Clean Air Act health benefits significantly outweigh costs? For example, a peer-reviewed study found that in 2010 alone the Clean Air Act Amendments of 1990, which reduced fine particulate pollution and ozone, avoided more than 160,000 premature deaths, 130,000 heart attacks, prevented 13 million missed workdays, and avoided 3.2 million missed school days by children.

AMERICAN OVERSIGHT

Based on the limited information provided, it is unclear as to the specific study referenced. However, as I indicated in my testimony, I am incredibly proud of the progress the U.S. has made to provide public health protections and improve our environmental stewardship while also growing our economy. If confirmed, I commit to continue this progress and protect the American people through commonsense and lawful regulations.

33.According to the Consumer Reports National Research Center survey completed in June 2016, 84 percent of Americans feel that automakers should continue to improve fuel economy for all vehicle types. About three-quarters of survey respondents specifically indicated that the U.S. government should require vehicle manufacturers to improve the fuel economy of their vehicles over time. As you may know, when the government stopped increasing fuel economy standards for two decades in the mid-1980s, vehicle fuel economy stopped improving. Now that we are once again making progress, what will you do to make sure that vehicle fuel economy continues to improve as Americans expect?

While the EPA regulates emissions under the Clean Air Act, it is true that Congress vested authority to regulate fuel economy through the Corporate Average Fuel Economy (CAFE) standards" framework set forth originally in the Energy Policy and Conservation Act. Congress vested responsibility for the CAFE program in the Department of Transportation, not the EPA; accordingly, I take no position on Congress's policy decision on this subject, or on the Department of Transportation's administration of the CAFE program. If confirmed as EPA Administration, I would administer the Clean Air Act in accordance with the terms of the Act, including Congress's statutory policy objectives, and would do so on the basis of the factual record in any given proceeding.

34.After conducting its Midterm Evaluation of fuel economy standards for model years 2022 through 2025, the EPA determined that automakers were well-positioned to meet the standards at lower costs than previously estimated. In fact, the EPA chose to retain the current standards to provide regulatory certainty for the auto industry despite a technical record suggesting that standards could be made more stringent.

Among the technologies that the EPA considered in reaching its determination that fuel economy standards could be readily achieved were so-called “off-cycle technologies.” Off-cycle technologies are innovations such as more efficient air conditioning through enhanced window glass that reduces solar load, stop-start systems, solar panels, active aerodynamics, and adaptive cruise control. By reducing the energy demands placed on the engine, these technologies serve to improve fuel economy and reduce tailpipe emissions of carbon pollution. Vehicle manufacturers may claim “off-cycle credits” for these carbon pollution-reducing technologies which may have benefits not adequately captured as part the

AMERICAN OVERSIGHT

standard fuel economy testing procedures.

Americans in Massachusetts, Ohio, Tennessee, North Carolina, Michigan, Indiana and across the country have good-paying jobs that depend on vehicle manufacturers continuing to demand these innovative technologies.

In your hearing, you explained how important it is for the EPA to consider jobs and economic impacts as part of its analysis and decision-making. If confirmed, would you support the "off-cycle credit" mechanism included that the EPA included in its fuel economy standards—a mechanism that drives American innovation and job growth? If not, please explain your position.

If confirmed, my job as Administrator would be to administer the statutes that Congress has enacted, including the statutory objectives that Congress incorporates into those statutes. If Congress chooses to enact legislation to promote certain technologies, such as "off-cycle" vehicle technologies, then those statutory priorities would fall within the EPA Administrator's responsibility. If confirmed, I would look forward to working with Congress on any such statutory proposals that it legislates.

35.Is the carbon dioxide that comes out of car tailpipes physically or chemically different from the carbon dioxide that comes out of power plant smokestacks? If so, how?

As a matter of law, Congress elected to enact different statutory frameworks for regulating emissions from stationary sources and mobile sources: Title I of the Clean Air Act for the former, Title II for the latter. As the Supreme Court recognized in Utility Air Regulatory Group v. EPA (2013), these two frameworks have significant differences.

36.Would the impact on the climate system of carbon dioxide from power plants be any different from that of carbon dioxide from tailpipe emissions? If so, in what way?

As noted above, Congress elected to enact different statutory frameworks for regulating emissions from stationary sources and mobile sources: Title I of the Clean Air Act for the former, Title II for the latter. As the Supreme Court recognized in Utility Air Regulatory Group v. EPA (2013), these two frameworks have significant differences.

37.Do you agree that the power sector and the transportation sectors each contribute at least a quarter of U.S. carbon dioxide emissions?

AMERICAN OVERSIGHT

According to the EPA (https://www.epa.gov/ghgemissions/sources-greenhouse-gas-emissions), in 2014 electricity generation accounted for 30% of total greenhouse gas emissions (quantified in terms of metric tons of CO2 equivalent), and transportation accounted for 26%.

38.Congress established protections for the air in national parks and wilderness areas in the Clean Air Act amendments of 1977. The quality of the air in New England parks like Cape Cod national seashore and Acadia national park suffers from pollution blown in from elsewhere. Last summer you joined other Attorneys General in comments objecting to the EPA's amendments to the Regional Haze Rule. Given your previous objection, if confirmed as EPA administrator, what will you do to fulfill the 40-year directive from Congress to protect and restore the air quality of national parks like Cape Cod and Acadia even if it requires states from outside the region to reduce their air pollution?

As I stated in my testimony before the Committee, I agree that the Clean Air Act gives EPA an important role in addressing interstate pollution issues, among many other things. All legal positions that I took in my capacity as Attorney General for the State of Oklahoma were in my capacity as an advocate. If confirmed, I will consider all matters presented to me with an open mind and will work to reach conclusions that are reflected in the administrative record of each matter and that comport with Congress's intent in enacting the Act.

39.The 1977 Clean Air Act amendments also provide a role for federal land managers in protecting the air quality of national parks and wilderness areas. If confirmed as EPA Administrator, how will you make sure that EPA honors the obligations federal land managers have under the Clean Air Act and that their expertise is incorporated into the policies necessary to achieve the goal of natural air quality?

I am confirmed, I will exercise my authority consistent with Congress's intent in enacting the Act. This includes acting transparently in a manner that takes into account the views of the federal land managers where the Act calls for their views, such as in assessing visibility impacts from new major sources in the preconstruction permitting process.

40.When Congress passed the original Renewable Fuels Standard (RFS) in 2005, "inadequate domestic supply" and "severe harm" to the economy were the only conditions under which the general waiver authority allowing the EPA to waive the RFS could be invoked. Despite this clear direction from Congress, in its 2014-2015-2016 final Renewable Volume Obligation (RVO), EPA used "available refueling infrastructure" as a condition to waive the standard even though Congress expressly rejected it. Do you believe that EPA's use of this reason for

AMERICAN OVERSIGHT

granting a waiver in the 2014-2015-2016 RVO is consistent with Congressional intent and the law?

As I stated at my hearing, I believe the EPA Administrator should use its waiver authority judiciously and not to undermine or question the commitments made by Congress when enacting the RFS.

41.The Renewable Fuels Standard (RFS) is one of our country's most important tools to reduce carbon pollution from the transportation sector. The 2007 amendments to the RFS included increasing volumes of cellulosic and advanced biofuels. If confirmed, will you increase the blending targets for cellulosic and advanced biofuels, including biodiesel, given Congressional intent? What role can EPA play to facilitate the expansion of cellulosic and advanced biofuels, including biodiesel?

Section 211(0) of the Clean Air Act contains enumerated tables of applicable target volumes of renewable fuel, specifically cellulosic and advanced, for calendar years 2006 through 2022. As I indicated in my nomination hearing, it is not the job of the Administrator of the EPA to do anything other than administer the program according to the intent of Congress. If confirmed, I will work to administer this program in accordance with statute and Congressional intent.

42.In response to an Inspector General report, the EPA announced in August that it would update the estimates of carbon pollution reduction from renewable fuels. If confirmed as Administrator, will you commit to completing this update and using the best available commercial and scientific information, including a recent USDA report on the emissions profile of renewable fuels?

I have not had an opportunity to review the referenced report, but, if confirmed, I will review it.

43.In a response to a Renewable Fuels Standard question, you stated during the hearing that "we have less consumption today." Please provide the annual U.S. consumption of gasoline since 2005 as well as forecasts for 2017 and 2018. Is U.S. consumption of gasoline declining or increasing?

In the course of my nomination hearing, I referenced market conditions that have changed since 2005, when the initial RFS program was enacted. When the program was updated in 2007, Congress could not predict how the

AMERICAN OVERSIGHT

market conditions would further change, from decreased consumption to more fuel-efficient vehicles, and therefore provided the Administrator with the ability to waive certain provisions contained in the Act. As I stated at my hearing, I do not believe the EPA Administrator should use this waiver authority to undermine the commitments made by Congress when enacting the RFS.

44.EPA set out to reduce mercury, arsenic, and other toxic chemicals from coal and oil-fired power plans through a rule that you sued to block. Power plants account for half of the mercury emissions in the United States and EPA's Mercury and Air Toxins Standards rule could save up to 11,000 lives and save $90 billion on health costs each and every year across the United States.

•The World Health Organization states that mercury has a toxic effect on humans, and in particular poses a significant threat to child development. Do you agree that mercury is a toxic substance and exposure to it should be limited? Please explain.

•Most people are exposed to mercury from eating fish and shellfish. Do you agree that we should take appropriate steps that reduce the amount of mercury in fish and shellfish? Please explain.

As I stated in my testimony before the Committee, mercury is appropriately regulated as a hazardous air pollutant under Section 112 of the Clean Air Act. If I am confirmed as Administrator, I will regulate under Section 112 in a manner that is consistent with Congress's intent in enacting that provision. I will also faithfully administer other federal statutes that regulate mercury to the extent that they are under my jurisdiction, including the Mercury Export Ban Act of 2008, the Mercury-Containing and Rechargeable Battery Management Act of 1996, the Clean Water Act, the Emergency Planning and Community Right-to-Know Act, the Resource Conservation and Recovery Act, and the Safe Drinking Water Act.

45.Donald Trump recently bemoaned "you're not allowed to use hair spray anymore because it affects the ozone." Hairspray is still available for sale, just without the chemical responsible for the ozone hole.

The ozone hole was first discovered in the mid-1980s. The world quickly came together to address the ozone hole through the Montreal Protocol. Actions were taken prior to confirmation of the hypothesis that chlorofluorocarbons (CFCs) due to human emissions, that chemical Donald Trump alluded to in his statement, to address the ozone hole. The treaties to address the ozone hole were the first universally ratified treaties in the history of the United Nations.
•Do you agree with the overwhelming scientific evidence that CFCs are the cause of the historic depletion of the ozone layer? If not, why not?

AMERICAN OVERSIGHT

•Do you consider the "Montreal Protocol on Substances that Deplete the Ozone Layer" to be a success? If not, why not?
•Considering the success of the world coming together to solve an environmental problem in that instance, do you believe that such a framework could be used as an example to solve other global environmental problems? If not, why not?

I consider the Montreal Protocol to be a successful example of the world coming together to solve an important environmental problem and that the Montreal Protocol could serve as an example to the President as he exercises his foreign affairs powers and to the Senate as it considers ratification of any treaty that may come before it.

46.Mr. Pruitt, you have repeatedly sued EPA to overturn regulations that seek to protect Americans from the effects of soot, ozone, greenhouse gases, mercury, arsenic and other air pollutants. These toxic air pollutants are often blown east from large industrial and energy sources in the Midwest, particularly impacting air quality and public health from Maine and Massachusetts to the Smoky Mountains.

•EPA's Clean Air Scientific Advisory Committee, which provides independent scientific advice to EPA on its air pollution standards, said that ozone causes a "decrease in lung function, increase in respiratory symptoms, and increase in airway inflammation." Do you agree with this scientific conclusion? Please explain.

•EPA projected that its final Cross State Air Pollution Rule would avoid up to 34,000 premature deaths, 15,000 non-fatal heart attacks and 400,000 asthma attacks – every year. Do you agree with this conclusion? Please explain.

•The EPA concluded that the health effects associated with fine soot particles include premature death, more ER visits and increased frequency of chronic respiratory disease. Do you agree with this conclusion? Please explain.

As I stated in my testimony to the committee, all legal positions that I took in my capacity as Attorney General for the State of Oklahoma were in my capacity as an advocate. If confirmed as Administrator, I will consider all matters presented to me with an open mind and will work to reach conclusions that are reflected in the administrative record of each matter and that comport with Congress's intent in enacting the Act.

47.Lead is not just a problem in Flint, Michigan, but all over the United States including Oklahoma. In your capacity as Attorney General of Oklahoma, what did you and your office do to prevent childhood lead exposure?

While I am concerned about children's health, matters of the sort you reference would be handled by Oklahoma's environmental regulators at the

AMERICAN OVERSIGHT

Department of Environmental Quality and the Oklahoma Water Resources Board.

48.During your confirmation hearing before the Environment and Public Works Committee, in response to a question, you indicated that you did not know if there is a safe level of lead. Scientific experts at the Centers for Disease Control and Prevention (CDC) and the World Health Organization, among other leading scientific bodies have repeatedly warned of the dangers of lead, specifically to children, concluding that there is no level of lead exposure that is safe.

•Do you agree that exposure to lead is dangerous and that no level of exposure should be considered safe?

•If confirmed, will you commit to making reducing childhood lead exposure a priority?
•What specific strategies will you implement to reduce lead exposure?
•Will you advocate for more funding for the programs that reduce lead exposure risk, especially in children?

I have not myself reviewed the scientific studies correlating blood lead levels to impacts in children. However, it is my understanding that neither EPA nor CDC have identified a "safe" level of exposure, but instead have adopted levels appropriate for action under their specific statutory authorities. If confirmed I will carry out EPA's authorities to reduce exposure to lead, including exposures by children.

49.The EPA is tasked with implemented the Safe Drinking Water Act (SDWA), and ensuring that the drinking water supply for many Americans is safe. Given the Flint, Michigan drinking water crisis, many Americans that took clean water for granted are now being faced with questions about a basic necessity.
•The Water Infrastructure Improvement for the Nation (WIIN) Act of 2016, or WIIN Act, passed Congress was signed by the President, and became public law on December 12, 2016. Will you commit to, as expedient as practicable, implementing the changes to the Safe Drinking Water Act?
•The human-caused drinking water crisis in Flint, Michigan has highlighted the widespread concern of lead in drinking water pipes across the nation. Additionally, nearly 4 million Americans may be unknowingly drinking unsafe water. Are you aware of how many public water systems in the United States have issues with lead in drinking water above safe levels?
•If a public official knowingly exposes their community to dangerous levels of contaminants, such as lead, should that official be held accountable for such actions? What do you think are acceptable punishments for such an action?
•If confirmed as EPA Administrator, what will you do to ensure that communicates across America have safe drinking water that is not contaminated with lead?

AMERICAN OVERSIGHT

If confirmed I will fully implement the changes to the Safe Drinking Water regulatory requirements made by the WIIN Act, including the changes to the notification requirements relating to lead levels in drinking water. If funding is provided, I will also implement the assistance programs authorized in that Act. I also will fully implement the existing authorities under the SDWA, including, as appropriate, EPA's authority to take emergency action. If confirmed I will seek a briefing from EPA staff on the number of public water systems that are not in compliance with the SDWA Lead and Copper Rule. I am unaware of EPA authorities to punish individuals other than to seek the resignation of responsible EPA officials, such as the resignation of the former Regional Administrator of EPA Region 5 who resigned after her failure to act upon information regarding the lead levels in the Flint water system became public.

50.The updated Toxic Substances Control Act (TSCA) requires that EPA evaluate the risks to "potentially exposed or susceptible subpopulations" and take action to protect these subpopulations from all identified risks. Do you commit to follow this statutory requirement?

Yes.

51.As Oklahoma Attorney General, you have consistently advocated for the rights of states in the area of environmental protections. Will you apply the preemption provisions in TSCA in a manner that is consistent with the statute and your pre-stated philosophy when it comes to state leadership on environmental protection matters?

As I stated in my letter to Senators Inhofe and Boxer from April 9, 2016, I believe the Lautenberg Act ensures states have an important voice at the table and I will apply the law as enacted by Congress.

52.The new law greatly increases transparency and provides EPA with an obligation to protect against unjustified claims of confidentiality by industry. Do you commit to uphold the bill's statutory requirements in this area?

As I stated in my letter to Senators Inhofe and Boxer from April 9, 2016, I believe public dissemination of information about chemicals is critical to ensure public health and safety is upheld. In my view the Lautenberg Act struck a common sense balance between protecting confidential business information and informing the public and I intend to apply the law as enacted by Congress.

AMERICAN OVERSIGHT

53.Do you agree that transparency is important to meaningful public participation in EPA's work on chemicals under TSCA? Do you commit to increasing transparency by fully implementing the provisions in the new law to prevent unjustified claims of confidentiality by industry?

As I have previously stated I believe the Lautenberg Act struck an appropriate balance between protecting confidential business information and informing the public and I intend to apply the law as enacted by Congress.

54.One of the reasons Congress was able to agree on a major re-write of TSCA was because of the fundamental agreement we made to clarify the law to ensure that costs could not be considered when EPA decided whether a chemical was safe or what level of a chemical was safe. Costs could only be a factor when deciding what type of regulation to require to meet that safe standard. Do you continue to support this approach? Would you oppose any effort to change this reformed approach to regulation?

If confirmed I intend to faithfully execute all provisions of the Lautenberg Act as enacted by Congress.

55.Nearly three decades ago, President George H. W. Bush attempted unsuccessfully to ban asbestos. Asbestos is banned in 55 countries across the globe and the World Health Organization says, quote, "all forms of asbestos are carcinogenic to humans". More than 30 Americans die each day from diseases like asbestosis and cancer caused by asbestos. Yet, in his 1997 book, *The Art of the Comeback*, President-elect Trump stated, that asbestos is, quote, "100 percent safe, once applied" and that he, quote, "believe[s] that the movement against asbestos was led by the mob." Do you agree with Mr. Trump that asbestos is 100 percent safe once applied or that the movement against asbestos was led by the mob?

Asbestos has been identified by the EPA as a high-priority chemical that requires a risk evaluation following the process established by the Lautenberg Act to determine whether conditions of use of the chemical substance pose an unreasonable risk. Prejudging the outcome of that risk evaluation process would not be appropriate.

AMERICAN OVERSIGHT

56.In 2015, I released a reported entitled, "Failing the Grade: Asbestos in America's Schools."[5] Asbestos is still found in schools across America, and the true scope of the problem is still hard to ascertain. More than 53 million American children and six million American adults spend large portions of their days in school buildings that may contain dangerous environmental hazards. My report laid out recommendations on how to address the findings of the report.

•Millions of students attend schools that may have asbestos and this is clearly a widespread problem. How would the EPA under your direction, if confirmed, begin to assess the true scope of the problem?

•Will you commit to raising awareness among students, parents, teachers, and other employees about persistent asbestos hazards in school buildings? If not, why not?

•Do you support periodic reporting requirements for schools to report their progress related to the management and abatement of asbestos? If not, why not?

•Do you support additional funding for enforcement actions for schools that do not follow the law and may be exposing children to asbestos? If not, why not?

•Do you support public access to information about where asbestos can be found in products, school buildings, and elsewhere to empower the public to avoid preventable asbestos exposures? If not, why not?

•Do you support providing consumers with access to current information about asbestos-containing products? If not, why not?

•Do you support schools that are known to have asbestos updating their reports of where asbestos is located within a school? If not, why not?

•Do you support states communicating information to the EPA on their progress with implementation of asbestos response plans? If not, why not?

•Do you support continued research and outreach to improve public awareness of the danger of asbestos exposure? If not, why not?

If confirmed I will take the responsibility of protecting human health and the environment very seriously and in accordance with the legal authorities established by Congress. EPA has identified asbestos as a high-priority chemical and is now required to set the scope of review as well as conduct a risk evaluation of the conditions of use of the substance. Without prejudging that review process any conditions of use of asbestos or any other chemical substance that pose an unreasonable risk are required to be addressed under the law and appropriate communication of chemical reviews as well as transparency in the process is an important aspect of the law as passed by Congress. In addition to the Lautenberg Act, in 1986, Congress enacted the Asbestos Hazard Emergency Response Act (AHERA) and then later amended the act in 1990 to modify EPA's school asbestos remediation program. While I have not assessed the appropriateness of periodic reporting requirements, if confirmed I intend to use the authorities granted to the Agency by Congress under TSCA and other statutes to

[5] http://www.markey.senate.gov/imo/media/doc/2015-12-Markey-Asbestos-Report-Final.pdf

AMERICAN OVERSIGHT

assess potential dangers as well as inform and protect the public as appropriate.

57.Last year entitled, "The ABCs of PCBs: A Toxic Threat to America's Schools."[6] Although Congress and the EPA banned the production and most uses of PCBs in 1979, the toxic chemical is still found in many schools across this country. In addition, my report laid out six recommendations.

•Since up 30% of students may be exposed to PCBs, this is a widespread problem. How would the EPA under your direction, if confirmed, begin to assess the true scope of the problem?

•PCBs are found within caulk and fluorescent light ballast in American schools. How would you encourage the removal of PCB-containing materials? Since these ballast are nearing the end of their useful life, EPA has said that it "recommends all PCB-containing FLBs be removed from lighting fixtures". Would you support the promulgation of a regulation under section 6(e) of TSCA that updates EPA's current regulations for PCBs and includes a requirement that all PCB-containing ballast be removed from schools and daycare facilities? If not, why not?

•There are multiple local education agencies and schools that have been seeking the advice and assistance of the EPA in dealing with PCB issues. Will you commit to assisting these agencies and schools and ensuring that the guidance EPA provides across all Regions of EPA is consistently and proactively provided? If not, why not?

•Do you support a requirement that each each school that was built or retrofitted between 1950 and 1979 (and therefor may contain PCBs) undergo a survey (to be administered by the local educational agency) in order to determine whether and where PCBs may be located within a school? If not, why not?

•Do you support a requirement for recordkeeping by state and local educational agencies of testing for, response to, and remediation of PCB hazards in schools? If not, why not?

•Do you support the EPA updating its testing guidance to encourage inspections of all schools built or retrofitted between 1950 and 1979, and improve its efforts to proactively and consistently communicate testing guidance to states, local education agencies, and schools with potential PCB hazards? If not, why not?

•Do you support the EPA developing guidance regarding the means by which parents, teachers, and employees should be notified of potential PCB hazards by schools and daycare facilities, including the manner in which such hazards should be described? If not, why not?

•Do you support the development and provision of updated guidance on the proper remediation of PCBs by EPA for schools, daycare facilities and other entities to use? If not, why not?

•Do you support the EPA proactively and regularly sharing best practices and other information outreach to states and school districts, and enforcement

[6] https://www.markey.senate.gov/imo/media/doc/2016-10-05-Markey-PCB-Report-ABCsofPCBs.pdf

AMERICAN OVERSIGHT

activities, related to PCB hazards in schools and daycare facilities across all EPA regions? If not, why not?
•Do you support EPA regional offices increasing their outreach to states and local education agencies to make them aware of available EPA's PCB regulations, guidance and resources? If not, why not?
•Do you support the EPA updating its current guidance on PCB hazards in schools to incorporate lessons learned from previous remediation projects and best available science? If not, why not?
•Do you support schools having detailed plans on how a school specifically plans to ensure the proper removal of PCBs before starting a PCB remediation project? Please explain.
•Do you support the authorization and appropriations of money for the testing for, response to, and remediation of PCB hazards and other environment hazards in schools? Please explain.

Addressing the issues of possible harmful exposures to chemicals in schools is an issue I would take very seriously if confirmed as EPA Administrator. While protecting children from exposure to chemical substances of concern it is important to have all the facts and ensure that an action does not create unintended consequences or put children at potentially greater peril via risk shifting or the possibility of remedial actions resulting in greater exposure to a substance. While I would not prejudge a regulatory outcome under the TSCA or any other law, I will work collaboratively with state and local governments and citizens to address issues and ensuring EPA regions are consistent and performing their legally required duties will be a priority if confirmed.

58.The Environmental Working Group reported that Oklahoma led the nation in pesticide-related illness and deaths between 2000 and 2010 based on data from the Center for Disease Control and Prevention.[7]
•Are you aware that your state, Oklahoma, leads the United States in pesticide-related illness and deaths? Why do you think this is the case?
•Recent reports have suggested that the increased use of pesticides is linked to the rapid decline in the bee population. What is your understanding of the science explaining the cause of the decline in bees in the United States?

I am not personally familiar with the report referenced in this question or generally the rate of pesticide usage in Oklahoma. I am generally aware of the important role bees play as pollinators, but it is unclear from the information provided in the question what specific reports are being discussed. If confirmed as Administrator, I would expect to be briefed by EPA staff before taking action on this issue and would work to ensure EPA

[7] http://www.ewg.org/agmag/2016/12/pruitt-s-home-state-leads-nation-pesticide-illnesses-and-deaths

AMERICAN OVERSIGHT
EXT-18-783-F-002083
ED_001863D_00006897-00137

followed all applicable legal requirements and made its decisions based on sound science.

59.Racial minorities and low-income communities are disproportionately affected by environmental pollution, siting of waste disposal facilities, and other industrial pollution causing activities. In many instances, the combination of poverty and race as well as lax enforcement and oversight of industrial activities results in worsened health outcomes by these communities.
•How will you address environmental justice and equity for minority and poor communities through EPA programs?
•What will you do to improve health equity as administrator of the EPA?
•What are your plans on reducing toxic pollution and disproportional burden of pollutants in communities of color?
•What will you do to increase enforcement and oversight in communities that are bearing the burden of environmental hazards?

•In your confirmation hearing, you committed to making environmental justice a top priority. If confirmed, will you commit to dedicating funding to assist minority and poor communities with resources and technical assistance to better engage with the EPA and industry about pollution activities and concerns occurring in their communities?

•What will you do to improve the EPA's office of Civil Rights to ensure that the EPA is in compliance with the Civil Rights Act of 1964?
•Will you uphold and make a top priority throughout the agency's work, Executive order 12898, which requires federal agencies to make "achieving environmental justice part of its mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minority populations and low-income populations."
•Do you vow to ensure that environmental justice activities throughout the agency remains focused on poor and minority communities?
•EPA recently developed the agency's EJ2020 action Agenda to better deliver on its historical promises of reducing disparities in environmental protection. Will you utilize and uphold this guidance and procedures outlined in this document throughout the work of the agency? Please explain.

As I testified, the Administrator plays an important role regarding environmental justice. If confirmed, I would work to faithfully execute the laws EPA is responsible for administering, in order to protect human health and the environment for all Americans. If confirmed, I would expect EPA to operate in an open and transparent manner, consider the views of stakeholders as appropriate, act based on sound science, and follow the laws as established by Congress, including the Civil Rights Act. I am personally unfamiliar with the operations of EPA's Office of Civil Rights and details of current indicatives regarding environmental justice referenced in the question, but I would expect, if confirmed, I would be briefed by staff about ongoing programs and activities before taking any action.

AMERICAN OVERSIGHT

60.If you are confirmed, do you commit not to direct the cessation of or otherwise impede the investigations or actions of the EPA Office of Enforcement and Compliance Assurance? If not, why not?

I am unfamiliar with the specific details of the actions referenced in the question. I would expect to be briefed by staff, in consultation with the Department of Justice as appropriate, before taking any action.

61.For each year since 1995, please provide information regarding the State of Oklahoma's environmental enforcement efforts. Specifically, for each year, please provide a list that includes:

•A brief description of each environmental enforcement action (including investigations and enforcement proceedings) initiated by the AG's office, including the date the action was initiated, the name of the subject of the action, and the nature of the action and environmental violation that led thereto.

•The annual budget of the Office of Environmental Enforcement, both in dollar terms and as a percentage of the AG's annual budget.

•The number of employees in the Office of Environmental Enforcement and in the AG's office writ large.

•A description of each environment enforcement action (including investigations and enforcement proceedings) that was closed, including a description of the resolution of the matter, whether a fine or penalty was levied (and if so the amount of such fine or penalty), whether non-monetary remedies were required (and if so, what), and whether a criminal prosecution was initiated in the matter (and if so what the resolution of the prosecution was).

In order for you to receive a comprehensive response to a voluminous request of that nature, I would direct you to make a request of the Oklahoma Attorney General's Office under the Oklahoma Open Records Act.

AMERICAN OVERSIGHT

Senator Merkley:

1. In an interview with The Oklahoman in 2015, you were talking about Oklahoma's environmental lawsuit against poultry producers who were polluting the Illinois River basin, and you said that in your view, regulation through litigation is the wrong approach. However, you have been highly active in bringing lawsuits against the EPA, whose regulations typically incorporate information gathered as a result of the kind of extensive stakeholder outreach that you seem to value. What have your experiences in suing the EPA taught you about how to lead the agency?

My experiences suing the EPA have taught me the value of ensuring that the EPA acts lawfully so that the regulations it promulgates are actually put to work protecting the environment, rather than being invalidated by courts.

2. The legal actions that you have brought against the EPA suggest that you feel the agency does not have the expertise or skill to make adequate assessments about how to maintain environmental standards. How do you propose to improve the EPA's capabilities so that the agency can achieve its goals in the proper manner?

The legal challenges I have brought have been to protect the interests of Oklahoma. If confirmed, I expect to learn more about EPA's workforce needs and ensure that the Agency is working towards achieving its goals in a proper manner.

3. You have said that the "American people are tired of seeing billions of dollars drained from our economy due to unnecessary EPA regulations". In a poll taken in December 2016 of 2,000 supporters of President-elect Trump, 64% of Trump voters support maintaining or increasing the federal budget for environmental protection and conservation. 78% of the Trump voters said they supported air pollution regulations generally, and 61% said companies should be required to reduce their carbon emissions. These are the people who supported Donald Trump, the man who nominated you for this position. Do you share the view of the majority of Trump voters and support maintaining or increasing the federal budget for environmental protection and conservation? Do you share the view of the majority of the President-elect's supporters that companies should be required to reduce their carbon emissions?

AMERICAN OVERSIGHT

EXT-18-783-F-002086

ED_001863D_00006897-00140

If confirmed as Administrator, I look forward to working with President Trump to achieve his environmental priorities using the tools authorized by Congress and respectful of the rule of law.

4. Several states, including Oregon, Washington, and California, have taken steps to regulate and reduce greenhouse gas emissions. Would you, as the leader of the EPA, attempt to undermine state-led attempts to combat climate change?

I respect and believe the states have a very important role in setting and implementing environmental standards that reflect the needs, challenges and expectations of their local communities. Congress established a clear process by which states may set more stringent standards subject to the approval of the Administrator and based on the specific request made and the corresponding record submitted. If confirmed and if I receive any such requests, I will consider them consistent with applicable statutory framework established by Congress.

5. The EPA produces a wide range of scientific documents. Are you committed to allowing EPA scientists the right of last review of all reports, executive summaries, press releases and websites related to purely science-based documents?

If confirmed, it will be my privilege to work with EPA scientists and the thousands of other dedicated public servants at EPA who have chosen to devote their careers to improving public health and our environment. Scientific documents are critical to EPA's decision-making and I commit, if confirmed, to ensure EPA scientific documents follow applicable laws and federal guidance on scientific integrity, information quality, and transparency.

6. Are you committed to transparency at EPA? If so, will you commit to making sure that EPA data is proactive made available to the public, consistent with privacy and confidential business information laws? Will you ensure that all data and data interpretation tools that are currently on EPA websites continue to be publicly available, and, if they become out of date, are archived in an accessible manner?

Yes, I am committed to transparency at EPA. I commit to making sure that EPA data is made available to the public consistent with privacy and confidentiality laws, and I will ensure that all EPA tools currently available to the public will remain accessible to the public and will be archived appropriately.

AMERICAN OVERSIGHT

7. How would you incorporate independent science in your decision making?

If confirmed, it will be my privilege to work with EPA scientists and the thousands of other dedicated public servants at EPA who have chosen to devote their careers to improving public health and our environment. I believe EPA decision-making should be based on sound, independent science, and if confirmed, my decision-making will follow applicable laws and federal guidance on scientific integrity, information quality, and transparency.

8. Are you familiar with the scientific integrity policies of the EPA? Can you commit to adhering to EPA's scientific integrity policies?

If confirmed, I expect to learn more about EPA's scientific integrity policies and I commit to follow applicable laws regarding scientific integrity.

9. How will you work with the White House Office of Science and Technology Policy to ensure that the work of scientists at the EPA, and scientists that provide input to the EPA, is free from political and financial influence?

If confirmed, it will be my privilege to work with EPA scientists and the thousands of other dedicated public servants at EPA who have chosen to devote their careers to improving public health and our environment. I have no first-hand knowledge of the EPA's consultation with the White House Office of Science and Technology Policy and, if confirmed, I would expect to learn more about EPA's work with the office. Indeed, EPA actions must be based on sound, objective science. I commit, if confirmed, to follow applicable laws and federal guidance on scientific integrity, information quality, and transparency.

10. Pacific coast shellfish aquaculture is estimated to be a $278 million industry, but over the last decade, oyster growers have struggled to maintain yields because the water in the hatcheries is becoming too acidic for oysters to survive. The oceans are becoming more acidic because they are absorbing more and more CO2 from the atmosphere. The impact of this acidification on oyster farming has been documented in the scientific literature. On numerous occasions, you've expressed skepticism about climate change, but there is no doubt in the minds of these shellfish growers about the reality that increased CO2 levels are threatening their livelihoods. As EPA Administrator, how would you address this issue?

AMERICAN OVERSIGHT

EXT-18-783-F-002088

ED_001863D_00006897-00142

If confirmed, I will implement the laws that EPA is charged to administer. Under section 304 of the CWA EPA establishes water quality criteria to protect aquatic life, including shellfish. Certain EPA programs also include authorities that can support projects that may benefit the shellfish industry, including the National Estuary Program under section 320 of the CWA, the Long Island Sound programs under section 119 of the CWA, and the Chesapeake Bay program under section 117 of the CWA. Finally, section 319 of the CWA can support programs and projects to reduce runoff that may impact oyster beds..

11. There are many groups within the Christian community -- and groups from other faiths -- in the United States who agree with the overwhelming scientific consensus that climate change is a danger to our country, and who strongly support taking action to mitigate the causes and impacts of climate change. For example, the Southern Baptist Convention made a statement in 2007 saying that Christians are responsible for caring for creation, and emphasized the importance of acting to prevent climate change. The President of the Southern Baptist Theological Seminary, has also issued a statement echoing these views. As EPA Administrator, would you share the view that, in the interest of caring for creation, that action should be taken to prevent climate change?

I believe we can grow our economy, harvest the resources God has blessed us with, while also being good stewards of the air, land, and water by which we have been favored. If confirmed, I will work to advance the mission of EPA to protect human health and the environment within the framework established by Congress.

12. The EPA is required to follow the best available science in its rule-making process. Given that every major scientific institution in the United States agrees with the position that the warming trend over the past century is due to human activity, do you have any reason to disagree with the position of every major scientific institution in the United States? Please explain.

I agree EPA's rulemaking process must be based on the best available science. However, I have no first-hand knowledge of the specific institutions or findings referenced in the question. If confirmed, I commit EPA's rulemaking process will be based on the best available science and will follow applicable laws and federal guidance on scientific integrity, information, and transparency.

AMERICAN OVERSIGHT

13. 97% of publishing climate scientists support the idea the climate change is real and man-made. You are an attorney, but have questioned the reality of climate change. Do you currently agree that climate change is real and man-made? If not do you believe the 97% of climate scientists that do hold that view are wrong, or lying?

The ability to measure with precision the degree and extent of human activity on our changing climate, and what to do about it, are subject to continuing debate and dialogue. If confirmed, I will make sure the agency's regulatory actions are based on the most up to date and objective scientific data.

14. What scientific organizations do you personally trust when it comes to the science of climate change? Please explain why you trust any organization(s) you list.

If confirmed as EPA Administrator, I will adhere to the applicable statutory authorities to fulfill EPA's mission to protect human health and the environment and will base my decisions on sound science, including advice provided by agency experts and advisory personnel.

15. Below is a list of statements from the Intergovernmental Panel on Climate Change's Fifth Assessment Report. For each statement, please indicate your agreement or disagreement and explain your reasoning: • "Warming of the climate system is unequivocal."
• "The atmosphere and ocean have warmed, the amounts of snow and ice have diminished, sea level has risen, and the concentrations of greenhouse gases have increased."
• "The atmospheric concentrations of carbon dioxide, methane, and nitrous oxide have increased to levels unprecedented in at least the last 800,000 years."
• "Carbon dioxide concentrations have increased by 40% since pre-industrial times, primarily from fossil fuel emissions and secondarily from net land use change emissions."
• "The ocean has absorbed about 30% of the emitted anthropogenic carbon dioxide, causing ocean acidification."
• "The largest contribution to total radiative forcing is caused by the increase in the atmospheric concentration of CO2 since 1750."
• "It is extremely likely that human influence has been the dominant cause of the observed warming since the mid-20th century."
• "Continued emissions of greenhouse gases will cause further warming and changes in all components of the climate system."
• "It is very likely that the Arctic sea ice cover will continue to shrink and thin and that Northern Hemisphere spring snow cover will decrease during the 21st century

AMERICAN OVERSIGHT

as global mean surface temperature rises. Global glacier volume will further decrease."
• "Global mean sea level will continue to rise during the 21st century.... [T]he rate of sea level rise will very likely exceed that observed during 1971 to 2010 due to increased ocean warming and increased loss of mass from glaciers and ice sheets."
• "Limiting climate change will require substantial and sustained reductions of greenhouse gas emissions."

There is a diverse range of views regarding the key drivers of our changing climate among scientists. I believe that these differences should be the subject of robust and open debate free from intimidation. If confirmed, I will continue to encourage an honest debate on our changing climate, the role of human activity, our ability to measure the degree and extent of human activity, and what to do about it. If confirmed, I will work to ensure that any regulatory actions are based on the most up to date and objective scientific data. I will also adhere to the applicable statutory authorities to fulfill EPA's mission to protect human health and the environment consistent with the process and rule of law established by congress.

16. Are you aware that each of the past three decades has been warmer than the one before, and warmer than all the previous decades since record keeping began in the 1880s? This trend is based on actual temperature measurements. Do you believe that there is uncertainty in this warming trend that has been directly measured? If so, please explain.

I am aware of a diverse range of conclusions regarding global temperatures, including that over the past two decades satellite data indicates there has been a leveling off of warming, which some scientists refer to as the "hiatus." I am also aware that the discrepancy between land-based temperature stations and satellite temperature stations can be attributed to expansive urbanization within in our country where artificial substances such as asphalt can interfere with the accuracy of land-based temperature stations and that the agencies charged with keeping the data do not accurately account for this type of interference. I am also aware that 'warmest year ever' claims from NASA and NOAA are based on minimal temperature differences that fall within the margin of error. Finally, I am aware that temperatures have been changing for millions of years that predate the relatively short modern record keeping efforts that began in 1880.

AMERICAN OVERSIGHT

17. Is there a scientific basis, based on the best available science and the weight of scientific evidence, for revoking or revising the finding that greenhouse gases endanger public health and welfare?

To my knowledge, there is nothing currently pending before the EPA that would require I take any additional actions on the Endangerment Finding on Greenhouse Gases and if there were, it would not be wise to prejudge the outcome.

18. Last year, Oklahoma's Department of Environmental Quality added eight lakes to what is now a list of 40 lakes where people should limit their fish consumption due to the dangerous levels of mercury. Do you believe that coal fired power plants contributed to the mercury contamination in those 8 lakes? Do you believe coal fired power plants contribute to mercury contamination in the environment?

I agree with the Oklahoma Department of Environmental Quality's determinations regarding fish advisories. As discussed elsewhere in my written responses to the Committee, coal fired power plants are the largest point source emitters of mercury into the air in the United States. I do not have direct knowledge of whether these fish advisories were caused by coal fired power plants or other sources, and if so whether those sources are located in the United States or elsewhere.

19. Do you agree that fish consumption is a leading source of mercury exposure and that the source of mercury in fish comes largely from the burning of fossil fuels? If you disagree, please explain why, including citations of the authoritative bodies that support your position.

I agree that fish consumption is a leading source of mercury exposure, particularly in certain subpopulations, such as unborn children.

20. Do you agree with the American Academy of Pediatrics' finding on the importance of minimizing mercury exposures for child health? If you disagree, please explain why, including citations of the authoritative bodies that support your position.

I agree with the American Academy of Pediatrics' finding. As I stated in my testimony before the Committee, mercury is appropriately regulated as a hazardous air pollutant under Section 112 of the Clean Air Act. If I am

AMERICAN OVERSIGHT

confirmed as Administrator, I will regulate under Section 112 in a manner that is consistent with Congress's intent in enacting that provision. I will also faithfully administer other federal statutes that regulate mercury to the extent that they are under my jurisdiction, including the Mercury Export Ban Act of 2008, the Mercury-Containing and Rechargeable Battery Management Act of 1996, the Clean Water Act, the Emergency Planning and Community Right-to-Know Act, the Resource Conservation and Recovery Act, and the Safe Drinking Water Act

21. You are currently representing Oklahoma in challenging the EPA's supplemental finding that it is necessary and appropriate to regulate emissions of mercury and other hazardous air pollutants from power plants. Do you agree that nearly all covered facilities are already in compliance with EPA's Mercury and Air Toxics Standard? If not, explain why not.

The Mercury and Air Toxics Standard has not been vacated by the Supreme Court or the D.C. Circuit and currently regulates both mercury and other air toxics. I do not have personal knowledge of whether any facilities are out of compliance with the Mercury and Air Toxics Standard. If I am confirmed as Administrator, I will exercise my authorities as Administrator to enforce all laws administered and regulations promulgated by the Administrator, including the Mercury and Air Toxics Standard, against sources that are out of compliance.

22. Do you agree that ground-level ozone is a dangerous pollutant that causes respiratory and cardiovascular harm? If no, on what basis do you disagree? If you disagree, please explain why, including citations of the authoritative bodies that support your position.

I agree that ground-level ozone is a dangerous pollutant that can cause respiratory and cardiovascular harm,

23. You are currently pursuing a lawsuit against the EPA over the agency's new ozone limits, which the EPA is required to review at least every five years. The new limit is 70 parts per billion; the previous limit, set in 2008, was 75 parts per billion. Prior to the announcement of the new limit, officials at the Oklahoma Department of Environmental Quality said that the state would be able to meet the 70 ppb level, however you have taken the position that EPA's standard is unachievable, and you have criticized the agency's data collection and its scientific processes. Could you please describe why you feel the EPA is unqualified to assess the safety and necessity of the new ozone levels? Could

AMERICAN OVERSIGHT

you please also describe why your state's Department of Environmental Quality was wrong to say that they could meet the new ozone safety levels?

Oklahoma joined four other states in a petition for review of EPA's 2015 decision to lower the National Ambient Air Quality Standard for ozone from 75 ppb to 70 ppb. The legal question raised by the state petitioners in the case is whether EPA set the standard at a level than can be achieved by states given the background concentrations and uncontrollable sources of ozone in many parts of the country. The briefs filed by the many State petitioners to that rule fully explain the States' position and speak for themselves. The case remains pending before the U.S. Court of Appeals for the District of Columbia Circuit.

24. In a 2013 interview, you said: "The evidence is clear that the current ethanol fuel mandate is unworkable. The decision by the EPA to lower that standard is good news for Oklahoma consumers. It's good the Administration finally recognized the concerns of consumers and a variety of industries and took steps to correct this flawed program." Please explain what you meant by "unworkable" and "flawed program". Do you still hold this view? If not, what caused you to change your view?

As I indicated during my nomination hearing, the Administrator and the EPA routinely missed the statutory targets in publishing the Renewable Volume Obligations each year, creating great uncertainty in the marketplace. In fact, in some years they missed the timeline, as far as submitting those targets, by over a year; in some cases over two years. The EPA failed to adhere to statutory requirements, resulting in a flawed and unworkable program.

25. In December 2015, the President-elect said of Senator Ted Cruz' opposition to the RFS, "…oil pays him a lot of money, he's got to be for oil, right? The oil companies give him a lot of money. So, but I'm with you. I'm with everybody. I'm with everybody. Look, I'm self-funding. I have no oil company. I have no special interest." In contrast, you have received over $300,000 from the fossil fuel industry, and have sent at least one letter to EPA on your own letter head that was drafted by the oil industry. If you are confirmed as EPA Administrator, will you commit to ensuring that your previous donors will not exert undue influence over the regulatory process and your decision-making at EPA with regard to the Renewable Fuels Standard?

If confirmed, I will work to administer the RFS in accordance with statute and Congressional intent.

AMERICAN OVERSIGHT

26. If the Sixth Circuit and the Supreme Court approve EPA's "Waters of the United States" rule defining the jurisdictional extent of the Clean Water Act, would you direct the EPA to amend that rule? If so, how? If the courts invalidate EPA's "Waters of the United States" rule, how would you direct the EPA to define which waterways and wetlands are protected by the Clean Water Act?

If I am confirmed, I will seek to make changes to the WOTUS rule following all appropriate administrative procedures, including the requirements of notice and comment under the Administrative Procedure Act.

27. In your opinion, under what circumstances should the Clean Water Act apply to pollution being discharged into groundwater? If the Ninth Circuit's forthcoming decision in Hawai'i Wildlife Fund v. County of Maui conflicts with your view, would you direct the EPA to write a new regulation overruling the 9th Circuit?

I believe that the Clean Water Act applies only to discharges to surface water, not groundwater. In contrast, the Safe Drinking Water Act requires permits for underground injection into certain aquifers. I cannot speculate on a judicial decision that has not been issued.

28. You've taken money from Monsanto, one the world's largest sellers of pesticides, in your previous electoral campaigns. How will you ensure that the safety of pesticides is vetted and regulated by the EPA according to the best science on risk and potential harm, rather than the profit-making interests of your campaign financiers? In your role as EPA administrator, how will ensure the agency is not unduly influenced by the political power of these large corporations?

If confirmed as Administrator, I would expect EPA's regulatory process relating to pesticides to be open and transparent and based on sound science in accordance with EPA's legal authorities.

29. What will you do to ensure EPA is conducting a transparent process regarding pesticide regulation? Please specify how you will approach notifying the public regarding pesticides in terms of notice of actions, publication of information (including studies and data) in the dockets, or timely responses to requests under the Freedom of Information Act. If you do not believe in a transparent process, why not?

I am committed to transparency at EPA. I commit to making sure that EPA data is made available to the public consistent with applicable privacy and

AMERICAN OVERSIGHT

confidentiality laws, and I will work to ensure that EPA uses a variety of tools and methods to keep the public informed about EPA activities as they relate to pesticide regulation if I am confirmed.

30. What will you do to work with pesticide manufacturers, distributors, conservation organizations, farmers, and beekeepers to ensure pesticide labels are clear and enforceable? Will you commit to enforcing these labels? If you will not work on this issue, why not?

If confirmed as Administrator, I would expect EPA's regulatory process relating to pesticides to be open and transparent and based on sound science in accordance with EPA's legal authorities.

31. EPA defines environmental justice as "the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies." Would you as EPA administrator advance the goal of environmental justice and if so, how?

If confirmed, I would work to faithfully execute the laws EPA is responsible for administering in order to protect human health and the environment for all Americans. As I testified, the Administrator plays an important role in regarding environmental justice.

32. Exposure to air toxicity, water pollution, lead, and hazardous waste sites results in disproportionate levels of disease, disability, and mortality amongst communities of color. As Administrator, what will you do to protect America's most vulnerable and underrepresented communities from environmental hazards and reduce the burden of toxicity shouldered by these communities?

As I testified, the Administrator plays an important role in regarding environmental justice. If confirmed, I would work to faithfully execute the laws EPA is responsible for administering in order to protect human health and the environment for all Americans. If confirmed, I would expect EPA to operate in an open and transparent manner, consider the views of stakeholders as appropriate, act based on sound science, and follow the laws as established by Congress

33. President-Elect Trump has stated that the drinking water crisis in Flint, Michigan, would never have happened if he was president. If appointed, what

AMERICAN OVERSIGHT

measures do you plan to take to protect drinking water across the country and particularly for the most vulnerable populations?

If confirmed, I will return EPA's focus to carrying out its core missions, including, as appropriate, use of EPA's emergency order authority under the Safe Drinking Water Act.

34. Oklahoma has seen a massive increase in earthquakes recently (907 (>magnitude 3.0) in 2016 and 585 in 2015 - which is more than the previous 35 years combined). The Oklahoma Geological Survey released a report in 2015 linking the disposal of fracking wastewater with earthquakes in Oklahoma. As recently as November 2016, a 5.0 magnitude earthquake struck Cushing, Oklahoma. Forty to fifty buildings were reported to have been damaged; Governor Mary Fallin felt the damage was substantial enough to declare a state of emergency for Payne County, where Cushing is located (a first step towards being granted federal aid). • What was the incidence of earthquakes in Oklahoma prior to widespread use of hydraulic fracturing in the past decade?
• What has been the incidence of earthquakes in Oklahoma in the past 10 years, since widespread use of hydraulic fracturing?
• What have been the economic and health impacts of earthquakes in Oklahoma in the past 10 years?
• What was your rationale for not using the office of the Attorney General to change the disposal practices of wastewater from hydraulic fracturing to protect the citizens of Oklahoma?

As I discussed at my confirmation hearing, the State of Oklahoma has taken seismicity issues very seriously and has taken proactive and aggressive actions. Oklahoma, as have other states, been successfully regulating hydraulic fracturing since the 40's and 50's. State and federal geologists have largely confirmed that the while the act of hydraulic fracturing itself poses little seismicity risk, the underground injection of wastewater at certain pressures and volumes can result in some seismic activity. While earthquakes have increased in frequency in recent years, the State has taken aggressive actions and reports have indicated the rate of seismic events has recently declined. Seismic activity can of course have significant impacts on communities and the activities linked to seismicity concerns in Oklahoma are regulated under state law by other agencies that my office works with as appropriate under Oklahoma law.

35. The EPA is the front line agency serving or assisting Indian Country with environmental protection and recognition of treaty rights. As EPA Administrator, would the you commit to the protection of tribal treaty rights in agency decision making processes in situations where rights may be affected by EPA actions

AMERICAN OVERSIGHT

including federal approval of: • state water quality standards (CWA)
• state 401 water quality certifications
• state distribution and use of pesticides (FIFRA)
• oil spill program countermeasures (SPCC)?

If confirmed, I will commit to ensuring that the United States meets all treaty obligations that it has pursuant to treaties with Indian Tribes.

36. Will you support current efforts to establish federal baseline water quality standards for Indian Reservations that do not currently have Clean Water Act standards in place? Please explain why or why not. An advanced notice of proposed rulemaking on this initiative was published in the Federal Register on September 29, 2016.

Because an advance notice of proposed rulemaking has been published, this matter will come before me for decision if I am confirmed as Administrator. Thus, I will not prejudge the outcome, but rather will commit to fairly evaluating the matter and reaching a sound decision.

37. The 2016 Frank R. Lautenberg Chemical Safety for the 21st Century Act (TSCA) requires the EPA Administrator to identify "potentially exposed or susceptible subpopulations" in chemical assessments to ensure their protection. Tribal and local populations in the Pacific Northwest consume high quantities of fish that can result in greater exposure to chemical contaminants. How will the new Administration implement TSCA reform to ensure that tribes and vulnerable populations unique to individual states are protected by federal rules on toxic substances?

The Lautenberg Act defined the term "potentially exposed or susceptible subpopulations" as "a group of individuals within the general population identified by the Administrator who, due to either greater susceptibility or greater exposure, may be at greater risk than the general population of adverse health effects from exposure to a chemical substance or mixture, such as infants, children, pregnant women, workers, or the elderly." Protecting citizens that are either more susceptible or who have greater exposure to a substance is an important aspect of the law and I will take great care to ensure the Act is faithfully executed if I am confirmed.

38. Will you commit to continue EPA's Treaty Rights Guidance and that initiative's implementation? Will you commit to continue EPA's Policy on Consultation and Coordination with Tribes?

AMERICAN OVERSIGHT

If confirmed as Administrator, I will evaluate all guidance documents and policies to ensure that they represent faithful execution of the duties imposed on me, and powers granted to me, by Congress. If the guidance and policy you referenced, I will keep them in place.

39. The 2014 U.S. National Climate Assessment concludes that climate change will impact every community in the United States, and that low-income communities and communities of color will be the hardest hit. These vulnerable communities will feel the impacts of climate change more severely due to lower quality housing, which is often less equipped to safely weather severe storms, severe heat, and freezing temperatures. How will you work to reduce climate change risks in low-income communities and communities of color?

I believe environmental justice for low-income and minority communities is an important role of the EPA Administrator. If confirmed, I will adhere to the applicable statutory authorities to fulfill EPA's mission to protect human health and the environment for all of our nation's citizens.

40. I understand that there are two political action committees affiliated with you. A spokesperson has made the statement that both PACs will be closed by the end of the month. Can you confirm that that both PACs will be closed by then?

I do not control either of the political action committees to which you refer, and thus cannot confirm their intentions. As you have heard, however, I have also heard that both entities have announced that they will wind down their activities.

41. It has also been reported that a 501(c)(4) organization called Protecting America Now has been created to raise funds to support your confirmation. If you are confirmed, will you make sure that Protecting American Now is disbanded? Please provide a list of Protecting America Now's donors.

I am not affiliated in any way with "Protecting America Now," and thus have no ability to disband the organization. For the same reason, I have no knowledge of the group's donors.

42. When is it appropriate for the Federal government to regulate pollution rather than states?

AMERICAN OVERSIGHT

Many federal environmental statutes were designed with the idea that the states would be the principal implementer. I believe it is essential to begin with that model. There are instances where the federal government approves or disapproves state programs or issues implementation plans in lieu of the state involved. However, this should be the vast exception to the rule. Some environmental statutes like CERCLA place the principal responsibility with the federal government for the important remediation activities under that statute. However, even with statutes like CERCLA, EPA still have an obligation with work with states and localities in designating sites which need remediation and most importantly in developing remediation plans.

43. Do you personally disagree with any existing Federal environmental law, or any provisions of any existing Federal environmental laws? If so, please explain which and why.

If confirmed, I will faithfully execute the laws as enacted by Congress.

44. Which EPA regulations do you believe should instead be left to states to implement, and why?

I believe federal environmental statutes are designed with states as a primary implementer. Environmental statutes envision that states have the delegated enforcement and primacy to implement and enforce environmental statutes. Only when that is not happening or when negotiations between and among states breakdown should EPA determine a dispute and only after attempting to assist states negotiate a local solution. I am fond of saying that we need national standards and neighborhood solutions. I think that should shape the work of the EPA.

45. When states or local governments regulate pollution with different sets of standards, various industry groups have raised the concern that it creates a patchwork of regulatory policies that make compliance difficult. Do you share this concern, and why?

As I testified in the hearing, I have pursued opportunities to address interstate environmental quality matters. One of the examples I have highlighted is the work that Arkansas Attorney General Dustin McDaniel and I took to address an enforceable water quality standard between Arkansas and Oklahoma. I have also discussed how Texas should be responsible when air quality issues affect Oklahoma and my experience with that. When

AMERICAN OVERSIGHT

negotiations among and between states breakdown EPA has a role to set environmental standards. However, that is should be a last course of action instead of the first. I believe environmental statutes are designed with states as a primary implementer. Environmental statutes envision that states have the delegated enforcement and primacy to implement and enforce environmental statutes. Only when that is not happening or when negotiations between and among states breakdown should EPA determine a dispute and only after attempting to assist states negotiate a local solution. I am fond of saying that we need national standards and neighborhood solutions. I think that should shape the work of the EPA.

46. Do you believe that the Renewable Fuel Standard is an appropriate regulatory role for the EPA versus states?

Section 211(o) of the Clean Air Act provides the Administrator of the EPA with the authority and responsibility to administer the RFS program. If confirmed, I will work to administer the RFS in accordance with statute and Congressional intent.

47. Do you agree that there should be national fuel economy standards to reduce tailpipe pollution from cars and make vehicles more fuel efficient? Please explain.

While the EPA regulates emissions under the Clean Air Act, it is true that Congress vested authority to regulate fuel economy through the Corporate Average Fuel Economy (CAFE) standards" framework set forth originally in the Energy Policy and Conservation Act. Congress vested responsibility for the CAFE program in the Department of Transportation, not the EPA; accordingly, I take no position on Congress's policy decision on this subject.

48. Do you support California's authority under the Clean Air Act to receive a waiver from the EPA to set emissions standards for vehicles that are stronger than EPA standards?

In the Clean Air Act, Congress provided that the EPA Administrator may waive the Clean Air Act's preemptive effect over some of California's state air quality standards for mobile sources, when certain specific statutory criteria are met. If confirmed as EPA Administrator, I will administer this program in accordance with Congress's objectives, on a case-by-case basis in accordance with the law and with the administrative record in any given case, upon proper petition by California.

AMERICAN OVERSIGHT

49. You are currently representing Oklahoma as one of 13 petitioners challenging EPA's standards limiting conventional, toxic, and greenhouse gas pollutants from new oil and gas facilities. Please describe how Oklahoma would prefer to handle these pollutants in the absence of EPA regulation. If your proposed pollution standards are more lax than the EPA's standards, please provide information supporting the why your standards are preferable from a public health standpoint.

As Attorney General, I sought to ensure that the Oklahoma Legislature retained its power to make policy for Oklahoma. Policymaking is the province of the legislature. Thus, I have no opinion with regard to what environmental policy might be appropriate.

50. Please also describe, and provide the same information, for what Oklahoma's policies would be should Oklahoma and its fellow petitioners be successful in challenging the EPA's implementation of the Cross-State Air Pollution Rule.

As my testimony indicates, I firmly believe that the EPA plays an important role in addressing interstate air quality issues, but it must do so within the bounds of its legal authority and justified by a record of support. The actions undertaken by the Office of Attorney General challenging certain EPA regulations have been because EPA exceeded it legal authorities as established by Congress and interpreted by the courts. The Department of Environmental Quality is responsible for implementing and enforcing environmental laws in Oklahoma.

51. You also represent Oklahoma as a petitioner in ongoing litigation against the EPA's 111(b) standards for CO2 emissions for new, modified, and reconstructed power plants. Should you win your suit, will Oklahoma take any steps to regulate power plant CO2 emissions, or does the state plan to continue not regulating CO2 emissions?

I will not prejudge the outcome of any rule that is the subject of ongoing litigation if I am confirmed.

52. As Attorney General, your role was also to prosecute environmental cases within Oklahoma. Please list all environmental cases you have originated as Oklahoma's Attorney General, and provide all documents related to those cases and a summary of the outcomes of those cases.

AMERICAN OVERSIGHT

Please see the list of cases attached to this response.

53. The Environmental Protection Unit was eliminated as a group within the Attorney General's office once you became Attorney General. This appears to indicate a decrease in support, or at least priority, for pursuing environmental cases within your office compared to your predecessor. To clarify if you have continued to pursue environmental cases as Oklahoma Attorney General, please provide description and documentation of all the environmental cases that were handled by your office versus the AG's office during Drew Edmondson's tenure. Please also describe the work your office did on any environmental cases that were begun during your predecessor's tenure but were continued or completed by your office.

My office continues to employ attorneys vested with responsibilities related to environmental protection, including the attorney who served as the lead attorney on the previous attorney general's "environmental protection unit." That attorney's responsibilities remain unchanged (he has been promoted, in fact), and he pursues exactly the kind of cases that he pursued under the previous attorney general. The only thing that changed was the internal organization of the attorneys vested with those responsibilities, because I concluded (consistent with the practices of every attorney general in the State's history but for my immediate predecessor) that it was not operationally efficient to have a separate unit for such work. Thus, I chose to house that work in the Office's Public Protection Unit and then later in the Solicitor General's Unit. As I explained in my testimony to the committee, my office continues to pursue environmental cases. I do not possess lists of cases pursued my predecessor so I cannot provide the comparative that you request. I am aware that many environmental cases take many, many years to litigate to completion, so some of the actions that my Office continues to pursue were initiated prior to my taking office. Please see attached list of cases.

54. As part of the Water Infrastructure Improvements for the Nation (WIIN) Act of 2016, Congress passed the Columbia River Restoration Act, a program which gives the EPA authority to create a competitive grant program to address environmental cleanup and restoration in the Columbia River Basin. This program empowers states and local communities to better coordinate and implement local cleanup and restoration efforts. Will you, as EPA administrator, work to advance and implement this bipartisan effort to empower local entities and states?

While I am not familiar with the Columbia River Basin restoration program, I support collaborative efforts and neighborhood solutions. I also respect

AMERICAN OVERSIGHT

Congressional authorizations. If confirmed, I will ask the EPA staff to brief me on this program and the new authority granted by Congress.

55. In January, 2017, the EPA announced $17 million in credit assistance for the Water Infrastructure Finance and Innovation Act (WIFIA). This program, initially passed into law as part of the 2014 WRDA bill, now has the funding needed to allow EPA to make approximately $1 billion in loans and leverage a total $2 billion in total water-infrastructure investment. As you mentioned in your hearing, water infrastructure is critically needed, but often overlooked. Will you, as EPA administrator, work to ensure adequate resources to implement the WIFIA loan program, and seek further funding and assistance for other water infrastructure programs and initiatives, such as the Drinking Water State Revolving Fund?

Yes, if confirmed.

56. The Federal Government has a long history of activities within Portland Harbor, which in 2000 was designated a Superfund site and is now one of the largest and most complex Superfund sites in the country. The history of Federal activities within the Superfund site includes ship building, repairing, and dismantling, as well as a variety other activities that likely led to some amount of contamination of the river. Today, the Willamette river sediment within the Portland Harbor Superfund site is contaminated with compounds associated with the activities carried out by the Federal government over the course of many decades. Now that the Environmental Protection Agency has issued its final Record of Decision for this Superfund site, there will be a process to divide up cleanup responsibilities among parties responsible for the contamination. Can you commit to work with the appropriate Federal agencies, such as the Department of Defense and Department of Justice, to ensure that the Federal government engages proactively with relevant stakeholders during the allocation process, takes ownership for its share of the contamination, and pays its fair share of the cleanup?

I am not familiar with the details of the remedy that has been selected for the Portland Harbor Superfund site. If confirmed, I expect to make clean up of contaminated sites one of my priorities and would be interested in hearing the views of the Congressional Delegation and other stakeholders on the issues raised by this cleanup plan.

Senator Sanders:

AMERICAN OVERSIGHT

The Environmental Protection Agency (EPA) has approximately 15,000 employees. The following questions ask how you, as Administrator, would treat civil servants and make human resource decisions.

1. Do you support--and promise to uphold--the merit system principles set forth in Chapter 23 Title 5 U.S. Code, which prohibit factors other than merit from consideration in civil service employment decisions?

If confirmed, I commit to implementing the law as enacted by Congress.

2. As Administrator, do you support use of the Holman Rule, which allows any member of Congress to propose amending an appropriations bill to single out a government employee or cut a specific program? Will you support Congress in passing an amendment under the Holman Rule?

If confirmed as Administrator, I would implement the law and work with the Agency in accordance with the laws passed by Congress.

3. Is retention and recruitment of a high quality scientific workforce at EPA a priority for you?

Yes.

4. As Administrator, do you believe that you will be better able to recruit and retain top talent at the EPA under conditions where Congress is able to individually target employees based on political considerations?

If confirmed as Administrator, I would implement the law and work with the Agency in accordance with the laws passed by Congress.

5. As Administrator, do you support Congress targeting and altering the salaries of individuals within the EPA?

If confirmed as Administrator, I would implement the law and work with the Agency in accordance with the laws passed by Congress.

AMERICAN OVERSIGHT

6.As Administrator, how will you generally view the division of responsibility and authority between Congress and your Department on personnel issues?

In my view, Congress passes the laws governing executive branch personnel.

On June 14 2016, EPA Administrator Gina McCarthy signed an order on "Transgender and Gender Non-Conforming Employees" (http://src.bna.com/f0T) and said at the time that it "reinforces that discrimination of any kind in the EPA workplace is unacceptable, including discrimination on the basis of gender identity, expression or perceived non-conformity." Among other things, the order states that an "employee should be permitted to use the [sanitary and related] facilities that correspond with their gender identity." This is in stark contrast to the suit you filed with 10 other attorneys general challenging the guidance issued under President Obama on accommodating transgender students in public schools.

7. Will you as EPA Administrator ensure that Administrator McCarthy's order is vigorously implemented, and continue to ensure that transgender and gender non-conforming employees are not discriminated against on the basis of their gender-identities?

If confirmed, I commit to protecting the rights of all EPA employees and will follow the law.

As Attorney General, you disbanded your office's Environmental Protection Unit and reduced your office's funding for environmental law to zero.

8. In your personal opinion, what are the most pressing air and water quality challenges that deserve the attention of the EPA? What would you do at the EPA to better address these challenges, if anything?

As discussed, the Oklahoma Department of Environmental Quality -- not the Office of Attorney General -- has primary responsibility for implementing and enforcing environmental laws in Oklahoma. Consistent with the practice of every Attorney General save one, I determined that a standalone unit was operationally inefficient. I opted to combine the Environmental Protection Unit and the Consumer Protection Unit into a single unit called the "Public Protection Unit." The Public Protection Unit continued the work of the Environmental Protection Unit, and that work continues to this day, headed by the very same attorney who worked in the Environmental Protection Unit under the prior Attorney General. As discussed, I believe EPA plays an

AMERICAN OVERSIGHT

important role in addressing cross-state pollution, and if confirmed, I would expect to work cooperatively with states to address the problems of environmental pollution.

The Keystone Sanitary Landfill (KSL) is an existing 714-acre landfill located in the boroughs of Dunmore and Throop, Pennsylvania. KSL has submitted an application to the Pennsylvania Department of Environmental Protection (DEP) for a permit modification to expand the facility's disposal capacity by approximately 145 million cubic yards. The permitting and approval of this process is strictly under the jurisdiction of the Pennsylvania DEP.

Under Subtitle D of the Resource Conservation and Recovery Act of 1976, states play a lead role in ensuring the federal criteria for operating municipal solid waste and industrial waste landfills regulations are met, and they may set more stringent requirements. Under the Hazardous and Solid Waste Amendments of 1984, EPA was authorized to determine the adequacy of the state permit programs. In the absence of an approved state program, the federal requirements must be met by waste facilities.

9.Are you committed to maintaining the process to determine the adequacy of a state's municipal solid waste management plan as required under the Hazardous and Solid Waste Amendments of 1984?

If confirmed, I commit to faithfully executing the laws I would be responsible for administering as EPA Administrator.

10.Further, if a state does not have an approved state program, are you committed to inspecting and enforcing federal requirements including the prohibition on open dumping?

If confirmed, I commit to faithfully executing the laws I would be responsible for administering as EPA Administrator.

11.Constituents have expressed concerns regarding the potential impact on the environment, quality of life, health and traffic congestion as a result of the Keystone Sanitary Landfill. How do you intend to work collaboratively with states in the event that a state violates the federal Clean Water Act or the Safe Drinking Water Act or a state requests assistance from EPA?

AMERICAN OVERSIGHT

I believe states play an important role in administering environmental laws such as the Clean Water Act, and if confirmed, I would expect to work cooperatively with states toward our shared goal of protecting human health and the environment consistent with EPA's legal authorities.

During your hearing, you stated that climate change was not a hoax, but you also were reluctant to discuss your views on the causes of climate change. You stated that your personal views were not relevant. However, as Attorney General, you challenged EPA's 2009 finding that greenhouse gases, including those from fossil fuels, endanger public health and welfare, due to anthropogenic climate change. The EPA went through an exhaustive scientific review and public comment process prior to issuing the Endangerment Finding, but in the lawsuit you labeled it "arbitrary and capricious." The Endangerment Finding references more than 100 published scientific studies and reports by the U.S. Climate Change Science Program/U.S. Global Change Research Program, the Intergovernmental Panel on Climate Change (IPCC), and the National Research Council of the U.S. National Academy of Sciences.

12.As Administrator, will you recognize the findings of the U.S. Climate Change Science Program/U.S. Global Change Research Program and the National Research Council of the U.S. National Academy of Sciences on the science of climate change, including its anthropogenic causes?

If confirmed, I will work to ensure that any regulatory actions are based on the most up to date and objective scientific data, including the ever-evolving understanding of the impact increasing greenhouse gases have on our changing climate.

In 2014, the Gund Institute for Ecological Economics and the University of Vermont released the Vermont Climate Assessment report. The report found that many of our state's communities have already been highly impacted by climatic changes and are engaged in processes to respond to these transitions. Some populations and regions of the state are particularly vulnerable, including rural areas and those increasingly exposed to extreme weather events. Flooding, such as experienced under Tropical Storm Irene, has been devastating to some of our state's communities. EPA partnered with Vermont in incorporating smart growth policies to increase flood resilience after the tropical storm. Under direction from Executive Order 13653, Preparing the United States for the Impacts of Climate Change, EPA and New England's EPA Region 1 both have developed climate adaptation plans that assist our region in preparing for these changes.

AMERICAN OVERSIGHT

13.Will you support EPA's continued climate adaptation planning and implementation in accordance with Executive Order 13653?

If confirmed, I will work to ensure the agency complies with and operates according to all applicable Executive Orders.

14.Do you support the Paris Climate Agreement?

The role of the United States in the Paris Agreement is a State Department matter. If confirmed, I will work to advance the mission of the EPA, which is to protect human health and the environment, consistent with the State Department's strategy for international engagement on climate change.

15.What are your plans for implementing the Paris Climate Agreement?

Should the government decide to continue to participate in the Paris Agreement and if I am confirmed as Administrator, I will collaborate with all involved agencies to ensure that commitments made on behalf of the United States are achievable and consistent with requisite legal authorities delegated by Congress.

You have written that the climate change "... debate is far from settled. Scientists continue to disagree about the degree and extent of global warming and its connection to the actions of mankind."

16.What would it take for you to admit that all three of these allegations are incorrect?

If confirmed, I will work to ensure that any regulatory actions are based on the most up to date and objective scientific data, including the ever-evolving understanding of the impact increasing greenhouse gases have on our changing climate.

17.Which scientists, saying what, would change your mind?

If confirmed, I will work to ensure that any regulatory actions are based on the most up to date and objective scientific data, including the ever-evolving

AMERICAN OVERSIGHT

understanding of the impact increasing greenhouse gases have on our changing climate.

18.If Harold Hamm told you he was no longer a climate change denier, would you believe him?

I do not believe he is a climate change "denier."

19.President Elect Trump's Secretary of State nominee, Rex Tillerson, is no longer a climate change denier. Why do you disagree with Tillerson?

There is a diverse range of views regarding the key drivers of our changing climate among scientists, policy-makers and President Trump's nominees. I believe that these differences should be the subject of robust and open debate free from intimidation. If confirmed, I will continue to encourage an honest debate on our changing climate, the role of human activity, our ability to measure the degree and extent of human activity, and what to do about it.

The Clean Air Act, and its amendments, sets limits on harmful pollutants like mercury and sulfur dioxide. As Oklahoma's Attorney General, you have repeatedly brought lawsuits against the EPA for their enforcement of the Clean Air Act, stating that the federal government has overstepped its authority to regulate and that these decisions are best left to the states. Pollution, like mercury and sulfur dioxide, from Midwest coal-fired power plants is blown right into New England. Mercury is a potent neurotoxin that bio-accumulates in the fish in our streams and lakes, and places our pregnant women and young children at particular health risk. Sulfur dioxide contributes to acid rain that that harms the forests and waters of New England.

20.If you do not believe that the EPA should have the regulatory authority that would protect states such as Vermont from interstate pollution, that leaves these science and public health decisions to the courts. Can you explain why federal courts should be in the position of determining safe levels of pollution to protect the health and welfare of Vermonters, as opposed to the federal agency who mission it is to protect human health and the environment -- air, water, and land?

As I stated in my testimony before the Committee, I agree that the Clean Air Act gives EPA an important role in addressing interstate pollution issues, among many other things. If I am confirmed as Administrator, I will exercise

AMERICAN OVERSIGHT

my authority in this area consistent with Congress's intent in enacting the Act.

Data shows that mercury pollution in the North Atlantic and mercury concentrations in our fisheries have fallen dramatically since the United States started requiring stronger emission controls from coal power plants.

21.Given this scientific confirmation of these regulations working how can you assure us that if you are confirmed to lead the EPA you will continue to accelerate the clean-up of all sources of mercury emissions, including coal power plants?

I agree that there has been a consistent downward trend in mercury concentrations, but note that this trend began well before EPA promulgated the Mercury and Air Toxics Standards. As I stated in my testimony before the Committee, mercury is appropriately regulated as a hazardous air pollutant under Section 112 of the Clean Air Act. If I am confirmed as Administrator, I will regulate under Section 112 in a manner that is consistent with Congress's intent in enacting that provision. I will also faithfully administer other federal statutes that regulate mercury to the extent that they are under my jurisdiction, including the Mercury Export Ban Act of 2008, the Mercury-Containing and Rechargeable Battery Management Act of 1996, the Clean Water Act, the Emergency Planning and Community Right-to-Know Act, the Resource Conservation and Recovery Act, and the Safe Drinking Water Act.

It is widely reported that EPA's Clean Power Plan (CPP) will be one of the first policies to be dropped under the new administration.

22.Do you envision that you will seek to replace the CPP with some other program that also would promote the reduction of greenhouse gas emissions nationally?

While I will not prejudge the outcome of any Rule that is the subject of ongoing litigation, if confirmed, I will work to achieve the objectives of EPA-administered laws consistent with the process and rule of law set out by Congress.

23.According to the EPA, "The Clean Power Plan will lead to climate and health benefits worth an estimated $55 billion to $93 billion in 2030, including avoiding 2,700 to 6,600 premature deaths and 140,000 to 150,000 asthma attacks in

AMERICAN OVERSIGHT

children." What do you say to parents who have children with asthma who are worried that the dismantling of the CPP?

If confirmed, I will administer environmental laws that protect human health and the environment within the framework established by Congress. I will follow explicit cost-benefit obligations to ensure the benefits are associated with the pollutant being regulated and the costs are reflective of market realities.

President-elect Trump has stated that the water poisoning that happened in Flint Michigan "would never have happened if I were president." More than 1,000 communities have lead poisoning levels higher than those found in Flint Michigan.

24.If you were head of EPA what actions would you take to ensure that every community has clean water to drink?

If confirmed, I will focus on EPA's core missions, including, as appropriate, use of EPA's emergency order authority under the Safe Drinking Water Act. I also will implement the newly revised TSCA statute to address chemicals and will continue implementation of monitoring, review, and regulation of contaminants under the SDWA.

25. What federal financial commitments would you need and what changes in environmental laws, policies and regulations would you need to ensure that a Flint-like situation never happens again?

It is my understanding that some requirements in the Safe Drinking Water Act Lead and Copper Rule relating to monitoring and when corrosion control treatment is mandated are ambiguous and need to be clarified to make both compliance and enforcement easier and prevent a Flint-like situation from happening again. If confirmed, I will ensure that the revisions to that rule proceed expeditiously. As to resources, I will return EPA's focus, including resources, to carrying out its core missions. In addition, I believe that the new WIFIA program offers significant opportunities to leverage additional infrastructure investments.

Lake Champlain is one of Vermont's most treasured environmental features. Tourism and property values are tied to the health of the lake—keeping its waters swimmable, fishable and drinkable. Run-off—including from lawns, paved roads and parking lots, and farmlands—contributes to high levels of phosphorus that spur algae growth. The algae turns the lake green and can be toxic. In 2016, EPA released new phosphorus limits for the lake by establishing a TMDL (Total

AMERICAN OVERSIGHT

Maximum Daily Load). We are concerned that you, as Attorney General, have opposed other clean-ups similar to that of Lake Champlain. You signed an amicus brief opposing EPA's clean-up of the Chesapeake Bay under the Clean Water Act.

26.As Administrator, will you continue the agency's support for the clean-up of Lake Champlain through these new TMDLs?

A TMDL under section 303(d) of the Clean Water Act does not establish a water quality standard. It is a tool for achieving a water quality standard by determining how much of a particular pollutant, like phosphorus, that a body of water can assimilate and achieve the water quality standard. EPA recently issued new phosphorus TMDLs for Lake Champlain to implement Vermont's water quality standards. These replace a prior TMDL that EPA had approved in 2002 and then disapproved 9 years later after being sued by the Conservation Law Foundation. I am not familiar with the details of either the original Vermont TMDL that EPA approved or the new TMDLs that EPA developed after being sued. I believe TMDLs can only be successful if developed in a collaborative fashion. It is my hope that the new Lake Champlain TMDLs were developed in such a fashion and in accordance with the law. If so, I am not aware of any reason that I would not support their implementation, if confirmed as EPA's administrator.

27.Specifically, should Vermont fail to make satisfactory progress toward meeting the TMDL, would you support EPA's prior pledge to ramp up federal oversight of Vermont programs and crack down on pollution from wastewater treatment facilities? If not, how will you ensure Clean Water Act obligations are satisfied?

Under Clean Water Act regulations (40 CFR 122.44), limits in a NPDES permit for a point source must be consistent with any waste load allocation for the discharge set forth in a TMDL and once these limits are part of a permit, they are federally enforceable. Vermont is authorized to carry out its own permitting program in lieu of the federal permitting program. If confirmed, I will work with the State of Vermont to see that the requirements of the Clean Water Act are met.

The EPA works with other state and federal agencies in developing contingency plans in the event of an oil spill. These plans identify and coordinate the activities of the different government agencies and private organizations involved in the response. Vermonters are concerned about the potential for oil spills, particularly from rail accidents, that might adversely affect the state's waters. We view the EPA as a critical partner in developing plans for, and responding to, the case of an oil spill with potential impacts to a water body or other area subject to the

AMERICAN OVERSIGHT

jurisdiction of the Environmental Protection Agency under the Federal Water Pollution Control Act (33 U.S.C. 1251 et seq.).

28.Do you as Administrator commit to the EPA's partnership with the states in developing plans for, and responding to, the case of an oil spill that affects waters under its jurisdiction, such as Lake Champlain?

EPA, in partnership with other federal agencies on the National Response Team, has a significant role in carrying out the National Oil and Hazardous Substances Pollution Contingency Plan. EPA is the lead agency for responses under the Oil Pollution Act to spills into inland waters (other than the Great Lakes) and the Coast Guard is the lead agency for coastal waters and the Great Lakes). If confirmed, I will support EPA's continued implementation of the oil spill response authorities given to it by Congress.

At EPA, science provides the foundation for Agency policies, actions, and decisions made on behalf of the American people.

29.What should be the role of science in the development of EPA policies, rules, and regulations?

I fully believe, as former EPA administrators have stated, that science must serve as "the backbone" of EPA actions.

U.S. Secretary of the Interior Sally Jewell has observed that "consumer spending for outdoor recreation is greater than household utilities and pharmaceuticals combined — and yet the federal government has never fully recognized or quantified these benefits." Outdoor recreation is not just an issue of concern to the Department of the Interior, it depends on clean air and water, which are under the purview of the EPA. The health and welfare of Americans is dependent on their ability to be actively engaged outdoors, breathing clean air and drinking clean water.

30.If under your watch, the EPA seeks to reduce regulations, will you take into account the economic losses from recreation to places like Vermont before doing so?

As I indicated in my testimony, if confirmed, my primary goal would be to protect the American people through lawful regulations. I understand environmental statutes, such as the Clean Air Act and the Clean Water Act,

AMERICAN OVERSIGHT

prescribe in certain instances that the EPA consider economic impacts in the rulemaking process. If confirmed, I commit to fully follow the law as provided by Congress.

Much of the nation's and the world's attention has been focused in recent months on the Dakota Access Pipeline, the construction of which crosses multiple states. Many pipelines on Indian lands are located entirely within a single state, however. Here EPA is not always the primary regulator, and state laws do not always apply. The health and environmental consequences of pipeline failures, however, can be enormous.

31.Will you commit to work with this Committee and other agencies to address the environmental and public health and safety issues associated with the operation of pipelines on Indian lands, including purely intrastate pipeline facilities?

If confirmed, I will faithfully execute all applicable laws as Administrator. As was discussed at my confirmation hearing I have worked successfully with Oklahoma Tribes and I would use my role to address environmental and public health and safety issues on state, federal, and tribal lands.

Yesterday, the Obama Administration took the final step in laying out a process for the next administration to provide a full environmental review for the Dakota Access pipeline.

32.Will you commit to fully supporting the Army Corps of Engineers as it conducts reviews of alternative routes and to meaningful consultation with Native American tribes when a project could affect their tribal treaty rights?

I cannot speak to the actions of the Army Corps of Engineers but if confirmed I will carry out any legal duties required by the Administrator of the EPA.

Oil and natural gas extraction by way of hydraulic fracturing, or "fracking," has expanded rapidly in the United States, including in your state of Oklahoma. As you know, there are increasing concerns about water and air contamination, including the seismic activity associated with wastewater disposal. EPA conducted a study of hydraulic fracturing's drinking water impacts and released a final report in December 2016. The agency found "hydraulic fracturing activities can impact drinking water resources under some circumstances." The report identifies certain conditions under which impacts from hydraulic fracturing activities can be more frequent or severe. Both Vermont and New York have

AMERICAN OVERSIGHT

banned hydraulic fracturing out of concerns for its public health and environmental effects.

33.Do you concur with the conclusions of the EPA's final report on hydraulic fracturing and drinking water?

As I discussed at my confirmation hearing, states like my home state of Oklahoma have been successfully regulating hydraulic fracturing for decades. As EPA officials have indicated the number of identified cases of drinking water contamination related to hydraulic fracturing activities is small particularly compared to the large number of hydraulically fractured wells and I agree with that assessment.

34.Are there gaps in available data that make it difficult for the EPA to fully assess hydraulic fracturing effects on drinking water as well as air quality?

Hydraulic fracturing has been extensively studied by state, federal, and non-governmental bodies.

35.What further studies—if any—do you believe would be appropriate for EPA to conduct on the effects of hydraulic fracturing on air and water quality?

I am not aware of any urgent need for new studies of hydraulic fracturing but if confirmed I commit to review any new information on the subject.

36.Do you agree, as EPA scientists found, that of the 1,606 chemicals injected for hydraulic fracturing, 173 chemicals are a proven risk to public health?

Risk encompasses both hazard as well as a likelihood of exposure. EPA found that 173 of the chemicals listed can be hazardous but did not speak to their risk likely because of their very low probability of exposure.

To date communities have been absorbing the costs of damage from oil and gas operations, whether that is in terms of health impacts, contaminated soils and water, which depress property values and destroy businesses, residential neighborhoods turned into industrial zones, earthquakes caused by injection wells (which are increasingly being excluded from homeowner insurance policies) and more.

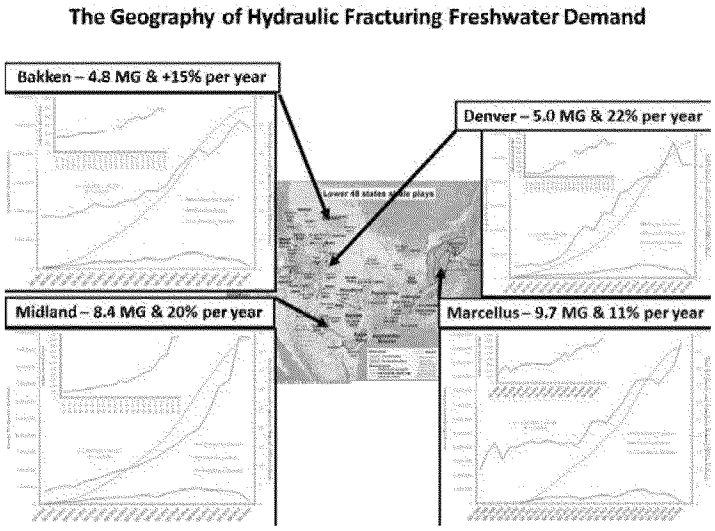
AMERICAN OVERSIGHT

37.What would be your approach as Attorney General to ensuring that communities do not to absorb these costs, and operators become responsible for the full costs of their operations, including damages?

As discussed at my confirmation hearing as Attorney General I have taken on oil and natural gas companies who violated Oklahoma laws and regulations. If confirmed, I will uphold and execute the laws as established by Congress.

38.Given that High Volume Hydraulic Fracturing (HVHF), or fracking gas wells, currently require an average of 4.8-9.7 million gallons of fresh water to fracture a single well (Note: This demand is growing by 11-20% per year), and only 4.5-7.5% of this water is being recycled, would you consider modern-day oil and gas drilling to be a long-term, sustainable solution to our country's energy needs?"

EPA's final report on hydraulic fracturing and drinking water found that in most cases hydraulic fracturing constituted "generally less than 1% of total water use" in counties and stated that their findings suggested "that hydraulic fracturing operations represented a relatively small user of water in most counties." I agree with these specific EPA conclusions.



39.When did you first find out that fracking could cause earthquakes in Oklahoma under certain geological conditions? Did you publicly call on industry to alter their practices?

AMERICAN OVERSIGHT

As I stated at my confirmation hearing the Oklahoma Corporation Commission is vested with the jurisdiction of regulating oil and gas activities, they have acted to address seismicity concerns in the state and I have worked with and supported the Commission and other state agencies as required by state law.

40.What percentage of injection wells in Oklahoma is monitored for pollution (in groundwater, deep and shallow)? In those that were monitored, what was the concentration of pollutants?

Wastewater disposal through underground injection is regulated by the State of Oklahoma through delegated powers from the EPA pursuant to the Safe Drinking Water Act and to the best of my knowledge the State appropriately follows all requirements under the law.

The “Hockey Stick Moment” is when a variable of interest hits an exponential point in its growth with respect to time. The most notable “Hockey Stick Moment” is the rising levels of atmospheric CO2, N2O, and CH4 resulting from anthropogenic forces. However, a moment closer to Oklahoma is the exponential increase in earthquake activity even the USGS has shown is a function of the disposal of nearly 20% of US fracking waste into Oklahoma and Kansas' Class II Injection wells.

41.Do you agree that this growth in quake activity is a function of excessive and irresponsible oil and gas waste generation and disposal and is worthy of more research and monitoring by the EPA?

As previously mentioned, wastewater disposal through underground injection is regulated by the State of Oklahoma under delegated powers from EPA pursuant to the Safe Drinking Water Act. Underground injection is not unique to the oil and natural gas industries as EPA has regulations on six different classes of underground injections. Underground injection of wastewater from oil and natural gas activities has been conducted safely in a number of states for decades, and, in a previous EPW hearing, Senator Cardin complimented "the actions taken" in Oklahoma with regard to oil and gas wastewater disposal. He went so far as to say the State "provided a good model that should be used in other States," lauding Oklahoma's actions as an example of "the Federal Government working with the State to develop the right framework for dealing with natural gas extraction." The State of Oklahoma has acted on local seismicity concerns and, to the best of my knowledge, follows all applicable SDWA requirements in regulating class 2 injection wells within the state.

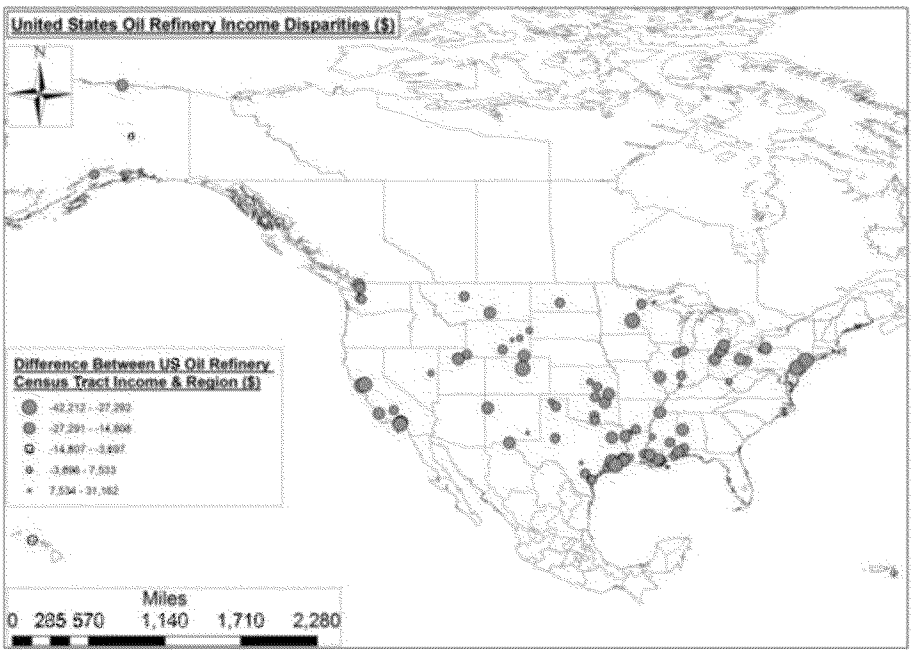
AMERICAN OVERSIGHT

42.You at first belittled the idea that oil and gas operations could cause human induced seismicity in Oklahoma, so did Harold Hamm. Do you now believe that you were both wrong?

As new information becomes available on a number of issues it should always be evaluated and taken into consideration. The State of Oklahoma has taken actions to address seismicity concerns related to the oil and natural gas industry and I support the state taking action.

43. How would a Trump/Pruitt EPA address growing environmental and economic justice issues associated with existing oil refineries and associated unconventional oil and gas infrastructure proposals?

As I stated at my confirmation hearing I believe addressing environmental justice in poor and minority communities is an important role of the EPA Administrator. If confirmed I intend to enforce laws under EPA jurisdiction with uniformity regardless of which industry a potential violation of law comes from.



44.Would you support implementing a requirement to provide full, well specific, public disclosure of all information related to oil and gas development involving

AMERICAN OVERSIGHT

hydraulic fracturing that informs understanding groundwater, surface water, public health and safety, and habitat potential impacts?

If confirmed I would review both EPA's legal authorities as well as the potential need for new requirements and regulations.

With regards to decommissioning a former nuclear power plant, a fair amount of confusion appears to exist in regulating non-radiological hazardous materials during active plant demolition. Most agencies, including the EPA, will defer to the Nuclear Regulatory Commission (NRC) for anything at a nuclear power plant site. However, the NRC does not regulate the non-radiological aspects of nuclear power plant operation--e.g., the NRC does not regulate chemical or oil spills that occur at a nuclear power plant site.

45.How active of a role should the EPA play during the hazardous material survey and active demolition phases of power plant decommissioning to assure that public health and the environment are not impacted by a site's prior use as a nuclear power plant?

In 2002, the EPA and the NRC signed a Memorandum of Understanding entitled "Consultation and Finality on Decommissioning and Decontamination of Contaminated Sites." The EPA's responsibilities with regard to the regulation of non-radiological hazardous materials are address in sections V.C.3, V.D.4, and VI. If confirmed, I will carry out EPA's responsibilities under the law.

The National Environmental Policy Act (NEPA) requires all federal agencies to consider the potential environmental impact of any industrial project while the agencies assess their regulatory authority specific projects. While the Nuclear Regulatory Commission (NRC) does conduct Environmental Assessments for nuclear power plant construction, operations, modifications and decommissioning activities, these assessments are frequently conducted after all other technical assessments for a nuclear power plant project have been evaluated; meaning that they are not an integral part of the NRC's regulatory decision-making process.

46.As Administrator, how will you encourage or require the NRC to more rigorously include NEPA requirements in its "technical" regulatory evaluations?

I am not familiar with how the Nuclear Regulatory Commission conducts its analyses under the National Environmental Policy Act. Under section 309 of

AMERICAN OVERSIGHT

the Clean Air Act, EPA reviews and comments on the NEPA analyses of other agencies. If confirmed, I will ensure that EPA continues to carry out this statutory responsibility.

Changes in weather patterns, such as heavier precipitation events that increase run-off and flooding, are affecting lakes, rivers, and reservoirs nationwide. Water quality, quantity, and the integrity of our water infrastructure are at risk. Recent studies in the Northeast have found that degraded water quality on lakes can cost lakeside communities millions of dollars in losses from both tourism and taxable income due to reduced property values.

47.How will the EPA support water resource management programs to address these issues?

If confirmed, I will continue to implement the water quality protection authorities granted to EPA by Congress. These include regulatory and financial and technical assistance programs. The Clean Water Act expressly leaves the allocation of water quantity to states. I further note that Congress has not given EPA water resources management authorities. Instead, such programs are carried out by the Corps of Engineers and, in the 17 Western states, the Bureau of Reclamation.

48.How would you address EPA's permitting backlog, e.g. the National Pollutant Discharge Elimination System (point source water dischargers) program?

Making sure permits are current is one of core functions under the statutory responsibilities given to EPA and in turn carried out by authorized states. However, in recent years states have been asked to shift their focus and resources to other activities. If confirmed, I would focus on ensuring EPA is able to carry out its core functions under our environmental.

Federal regulations such as the Clean Water Act and the Clean Air Act set national standards to protect our natural resources and safeguard public health. In 2010 you campaigned against a "one-size-fits-all strategy" towards environmental protection.

49.What did you mean by that and how would you, as EPA Administrator, ensure that all Americans are adequately protected against poisonous water and air regardless of where they happen to live?

AMERICAN OVERSIGHT

As I said in my testimony before the committee, I support national standards and neighborhood solutions. That means there may be one standard that applies nationally, but not only one way to achieve that standard. If confirmed, I will bring this philosophy to my role as EPA Administrator.

50.Do you support and stand behind the premise of the Clean Water and Clean Air Acts that every American has the right to clean water and air?

I fully support the Clean Water Act and the Clean Air Act.

In a court filing opposing the Waters of the United States you wrote "This regulation usurps the state's authority over its land and water use, and triggers numerous and costly obligations under the [Clean Water] Act for the state and its citizens."

51.Without national regulations how would you guarantee the quality of water that flows across state boundaries?

Regulation of rivers and streams that form the boundaries of states or flows from one state to another is not an issue raised by states in the WOTUS litigation.

52.Do you believe that the only people with an interest in water are those within a state and not downstream neighbors?

No.

53.Every national science organization, not to mention the Pentagon, lists climate change as a critical threat to our planet, our economy, and our national health. The Pentagon considers Climate Change a "Threat Multiplier" and a "Growing Security Threat." Do you agree with the Pentagon and our National Security advisors regarding the severity of this crisis?

I have no reason to disagree with the statements from the listed security experts, although I have not made any attempt to independently verify their accuracy.

AMERICAN OVERSIGHT

54.Please describe your plan, process, or other information that the EPA may be able to provide to the Pentagon to mitigate or mollify the threats our military describes.

Interagency cooperation is very important. I believe the development of military readiness and response plans are best left to our military and national security experts. If confirmed, I will provide technical expertise to other agencies as appropriate.

55.Will you be promoting greater use of carbon-based fossil fuels?

I do not believe it is the mission of the EPA to promote one type of energy source over another. If confirmed as Administrator, I will fairly and equitably enforce the laws within the framework established by Congress and not pick winners and losers.

56.Do you think the EPA has any role in helping our nation decrease or end the consumption of carbon fuels?

The mission of EPA is to set standards that protect the environment and the health and welfare of our citizens. While setting national energy policies are not within the statutorily ascribed purview of the agency, EPA regulatory actions often impact the ability of those charged with generating our nation's energy to do their job. If confirmed, I will listen to all impacted stakeholders when developing EPA actions. I will also coordinate with impacted agencies, such as the Federal Energy Regulatory Commission, to ensure EPA's actions do not undermine their equally important missions and statutory objectives.

57.Do you see any reason for reducing carbon emissions that come from using fossil fuels like oil, coal, and natural gas?

I believe the Administrator has an important role when it comes to the regulation of carbon dioxide. If confirmed, I will fulfill the duties of the Administrator consistent with Massachusetts v. EPA and the agency's Endangerment Finding on Greenhouse Gases respective of the relative statutory framework established by Congress.

58.What do you think are the most reliable sources for scientific news and information?

AMERICAN OVERSIGHT

If confirmed as EPA Administrator, I will adhere to the applicable statutory authorities to fulfill EPA's mission to protect human health and the environment and will base my decisions on sound science, including advice provided by agency experts and advisory personnel.

59.Do you plan to request regular briefings from government science and/or intelligence sources? If so, how often? If not, why?

If confirmed, I will make decisions based on sound science reflective of diverse, objective and unbiased views conducted in a transparent manner reliant on public engagement and consistent with the framework established by Congress.

60.Do you intend to have meetings with or receive regular briefings from private industrial sources? If so, how often? If not, why?

If confirmed, I intend to operate the agency consistent with the statutory framework established by Congress and follow associated processes, which require extensive outreach with the public and regulated community.

The President-Elect has positioned himself as a champion of coal miners. You may be aware of the crisis facing the nation's largest multi-employer health and pension plans serving coal miner retirees, administered by the UMWA. The pension plan is facing insolvency within 10 years and, more immediately, over 20,000 retired coal miners and their dependents are facing an imminent loss of health care coverage. Senator Manchin e developed a bi-partisan legislative response to this crisis called the Miners Protection Act that I co-sponsored. It was marked up and passed by the Senate Finance Committee last September on an 18-8 vote. We were expecting the Senate and House Republican leadership to work with us to include the MPA in the Continuing Resolution package that we deliberated on during the lame duck session. We also asked the President-Elect to express his support for this legislation given his abundant pro-coal miner rhetoric during the Presidential campaign. Senate Democrats sent him a letter imploring him to publicly express his support. We got no response. The outcome was a Continuing Resolution that included nothing more than a 4 month extension of health benefits for the retirees who now face a termination of benefits in April instead of this month.

AMERICAN OVERSIGHT

61.How will you work with the President-elect and the rest of his cabinet to work with Congress to pass the MPA and fulfill the nation's commitment to the coal miners whose work powered this country for generations?

I am not familiar with the proposed legislation referenced in the question or EPA's authorities and responsibilities for pension and health care plans for miners.

As you may know, each federal agency, including EPA, has an important role in enforcing Title VI of the Civil Rights Act of 1964, which prohibits discrimination on the basis of race, color and national origin by recipients of federal funds. This is an accountability law — before the law was passed, federal funds were subsidizing agencies and organizations, from schools to hospitals to other agencies of government that discriminated. The case that led to the passage of Title VI was *Simkins v. Moses Cone Memorial Hospital,* a 1963 case in which a circuit court finally, 9 years after *Brown v. Board,* struck down a provision of federal law that allowed federally subsidized hospitals to have separate wings for "whites" and "colored" people under a "separate but equal" provision of a federal law called the Hill Burton Act.

62.Are you familiar with Title VI?

Yes.

63.Are you familiar with the Moses Cone Memorial Hospital case?

Yes.

64. If confirmed, wiill you commit to enforcing Title VI and the regulations promulgated by EPA to enforce Title VI?

If confirmed as Administrator, I will faithfully execute all laws enacted by Congress that impose duties or grant authority to me as Administrator, including the Civil Rights Act.

Title VI (at 42 USC 2000d-1) specifically empowers "each federal department and agency" that distributes federal funds to effectuate Title VI and then authorizes each agency to issue rules, regulations and orders to implement the law. Thus, the authority and responsibility to enforce Title VI and to ensure that recipients of

AMERICAN OVERSIGHT

federal funds are not discriminating rests with each federal agency, including EPA. As you may know, federal enforcement is all the more important because affected communities can't go to court to enforce claims unless they can prove intentional discrimination under a case that arose out of Alabama — *Alexander v. Sandoval*, 532 U.S. 275 (2001).

65.Are you familiar with the text of Title VI, 42 USC 2000d, which prohibits discrimination on the basis of race, color or national origin?

Yes.

66.What is your vision for Title VI enforcement at EPA? What reforms need to be made? What concrete steps do you envision to strengthen civil rights enforcement at EPA?

If confirmed as Administrator, I will faithfully execute Title VI. I will expect my staff to evaluate any areas that might need reform, and I will take appropriate actions based on the recommendations made to me.

67.Are you familiar with the Supreme Court decision in *Alexander v. Sandoval* (2001)?

Yes.

68.To your knowledge, does the text of the law define or limit the meaning of "discrimination"?

I cannot answer this question without additional context as to what text of what law you refer to.

69.Are you familiar with regulations promulgated by EPA to implement this language, found at 40 CFR Part 7?

I cannot answer this question without additional context as to what you are referring to when you say "this language."

70.In your opinion, does this language further define what is meant by "discrimination"?

AMERICAN OVERSIGHT

I cannot answer this question without additional context as to what you are referring to when you say "this language."

71.In fact, the regulations prohibit actions with an unjustified disparate impact. Do you agree?

The regulations speak for themselves.

72.Are you aware of criticism that EPA has historically done a “poor” job of enforcing Title VI and its regulations?

I am not.

73.If so, do you agree or disagree with criticisms that EPA has historically done a “poor” job of enforcing Title VI and its regulations?

Because I have not heard those criticisms, I cannot say whether I disagree or not.

74.Are you familiar with the Deloitte Report (2011), see https://assets.documentcloud.org/documents/723416/epa-ocr-audit.pdf, which documented problems with EPA’s enforcement of Title VI? If so, what is your past experience with the Deloitte Report?

I am not familiar with the report you reference.

75.Were you aware that the Deloitte Report made the following findings:

•The Office has not adequately adjudicated Title VI complaints – those addressing allegations of discrimination against communities of citizens affected to environmental rules promulgated by the EPA.

•OCR has not completed compliance checks of EPA grantees, in a timely or effective manner, to ensure that grantees are not engaging in discrimination in their work.

I am not familiar with the report you reference.

76.If so, what is your past experience with the findings?

AMERICAN OVERSIGHT

I am not familiar with the findings.

77.In your opinion, what has the EPA already done to address these issues?

I do not know what EPA has or has not done to address any such issues.

78.Do you know whether these steps have been effective?

Because I am not aware of the steps taken--if any--I cannot judge their effectiveness.

79.In your opinion, what more could the EPA do to address these issues?

It would be inappropriate for me to prejudge an issue that may come before me for decision if I am confirmed as Administrator. If the issue comes before me, I will ensure that the issue is fully and fairly considered, as part of a transparent process that seeks input from all stakeholders.

80.If confirmed, will you commit to taking action to address these issues?

If confirmed as Administrator, I will faithfully execute all laws enacted by Congress and imposing upon EPA duties or powers.

81.Do you believe that recipients of federal funds — across this whole country — are making any decisions that are discriminatory?

I do not doubt that some recipients of federal funding engage in behaviors that violate federal anti-discrimination laws.

82.Under Title VI and its regulations, should recipients of federal funds review whether a decision has a disproportionate adverse impact to ensure that it is in compliance with civil rights law?

Recipients of federal funds should take all actions required by law to ensure that they are in compliance with federal civil rights laws.

83.Do you have plans for pre-award compliance reviews? When would any such plans go into effect? And post-award compliance reviews? What would such reviews involve?

AMERICAN OVERSIGHT

If confirmed as Administrator, I will ensure that federal funds are awarded in compliance with federal law.

84. What is your understanding of the obligations of recipients under Title VI and EPA implementing regulations? Do you think those obligations are sufficient?

The obligations of recipients of federal funds are defined by the statutes and regulations to which you refer. Those statutes and regulations speak for themselves.

Energy burdens above six percent of a household's income are typically considered unaffordable, but low income households spend an average of 15 to 20 percent of their income on energy bills. Low income families are also more likely to live in older, inefficient housing. The Clean Power Plan provides incentives to states to invest in energy efficiency improvements in low income communities.

85.Are you concerned about the lack of access to energy efficient, affordable housing for low income families?

I am unfamiliar with EPA's role and statutory authorities as they relate to affordable housing. I am concerned about the impact regulations can have on the cost of energy for consumers.

86.As EPA Administrator, how would you help low income working families reduce their energy burdens and access energy-efficient affordable housing?

I am unfamiliar with EPA's role and statutory authorities as they relate to affordable housing.

Low-income rural and urban communities and people of color are disproportionately live near, are exposed to, and die from environmental risks/hazards. As of February 27, 2014, there were 1322 Superfund sites on the National Priorities List in the United States. Fifty-three additional sites have been proposed for entry on the list. Communities of color breathe in nearly 40 percent more polluted air than whites. Sixty-eight percent of African-Americans live within thirty miles of a coal-fired power plant, the zone of maximum exposure to pollutants that cause an array of ailments, from heart disease to birth defects. Half of all U.S. Latinos live in the country's most polluted cities. Hispanic children are twice as likely as non-Hispanic white children to die from asthma while, from 2012-2014, African American children had a death rate ten times that of non-Hispanic white children. African-American children are three times as likely to suffer an asthma attack.

AMERICAN OVERSIGHT

87.As EPA Administrator, how would you ensure that vulnerable low-income communities and communities of color are not overburdened by the harmful impacts of pollution?

If confirmed, I expect to make the cleanup of contaminated land one of my priorities. I believe the nation's environmental laws apply to all Americans.

88.Would you say there is anything you will do, if confirmed, to help these Americans? Will you push to reduce smog and particulate matter that causes more asthma attacks and other lung problems? Or is that a matter for the states and not the EPA?

If confirmed, I will work to ensure human health is protected by implementing Clean Air Act provisions, such as the National Ambient Air Quality Standards for criteria pollutants, including for ground-level ozone and particulate matter, which prioritize protection of human health and welfare. I will also work to ensure all Americans are treated equally under the law in furtherance of EPA's mission to protect human health and the environment.

EPA has adopted many cost-effective safeguards in the past eight years that would significantly reduce the pollution that contributes to asthma attacks in children -- many of which you challenged as Attorney General of Oklahoma.

89.Can you explain how you will protect the interests of these and other children that suffer from asthma?

As I stated in my testimony to the committee, all legal positions that I took in my capacity as Attorney General for the State of Oklahoma were in an the capacity of an advocate. If confirmed as Administrator, I will consider all matters presented to me with an open mind and will work to reach conclusions that are reflected in the administrative record of each matter and that comport with Congress's intent in enacting the Act.

90.Will you commit to working to further reduce pollution, including pollution that disproportionately burdens Hispanic and Environmental Justice communities?

If confirmed, I will work to ensure all Americans are treated equally under the law in furtherance of EPA's mission to protect human health and the environment.

91.Do you think the EPA has done enough to ensure that low-income communities near brownfields receive the same amount of attention as high-

AMERICAN OVERSIGHT

income communities? Will you give priority to the safety and health of our children and future generations over short-term current economic gains of few?

I do not know what EPA has or has not done on this issue. If confirmed as Administrator, I will work to ensure the brownfields program is operated in accordance with applicable legal requirements.

92.Municipal electric utilities depend on the municipal bond tax-exempt status. For Vermont Municipal electric utilities, this is particularly true with regard to utility investments. Do you support tax-exempt bonding as one important tools to improve utility infrastructure (electric, water, wastewater, etc)?

As Attorney General for Oklahoma, I have not studied the issues related to tax-exempt bonds for utility infrastructure. I am not familiar with EPA's role and legal authorities as they relate to municipal tax-exempt bonds.

Your state of Texas is part of a market (ERCOT) that is not Federal Energy Regulatory Commission jurisdictional. This means that Texas does not comply with the same requirements as electric utilities in Vermont and other ISO regions face. ERCOT seems to have embraced wind and other renewable sources.

93.What are the strengths of the ERCOT approach?

I am Attorney General for Oklahoma, not Texas, and do not have an opinion on the Texas electric grid.

94.How would you contrast those with the strengths and weaknesses of the New England ISO?

I am not familiar with the electric grid in New England.

“Green infrastructure” (forests, wetlands, natural floodplains, etc.) can play a critical role in reducing impacts of flooding from extreme weather events like Tropical Storm Irene, and in helping to meet essential water quality requirements/improvements such as the EPA-approved Lake Champlain Total Maximum Daily Load (TMDL) plan. Also, green infrastructure is often much more cost effective than updating or investing in new traditional “gray infrastructure.” EPA has played an important role in providing training, technical and financial assistance related to capitalizing green infrastructure.

AMERICAN OVERSIGHT

95.What do you see as EPA's role going forward related to green infrastructure?

Green infrastructure is a good example of a neighborhood solution that can achieve compliance with national standards. I believe EPA should be supportive of such efforts. If confirmed, I will work to break down barriers within EPA to the use of green infrastructure.

In your own state of Oklahoma, wastewater disposal from fracking and drilling has induced thousands of earthquakes, threatening lives and destroying property. Joe and Mary Reneau suffered through a 5.7 magnitude quake (Nov. 6, 2011) near Prague, Oklahoma – their chimney fell into the living room, right on top of a favorite spot of Mary's to sit. Luckily for them, Mary wasn't sitting there at the time, they had earthquake insurance, and they had $200,000 of repairs done on their house. Joe jokes that he won the earthquake lottery. Jerry and John Loveland weren't so lucky, they had $50,000 worth of damage done on their house, no insurance, and no way to pay for the damage. Oklahoma is an oil and gas state. Joe Reneau said he wouldn't bring any claims against the oil company, because if he did, he would be "run out of town." Oklahoma regulators have done next to nothing to help those harmed by oil industry induced quakes or prevent more destruction.

96.As EPA administrator, what will you do to help the Amos family, John and Catherine Fenton, or all those in Oklahoma threatened by oil industry induced earthquakes?

As I have previously stated, underground injection is regulated by the State of Oklahoma under delegated authority from EPA under the Safe Drinking Water Act. The State has taken action to address seismicity concerns and, if I am confirmed, I will continue working with States and within EPA's legal authorities to address public health and environmental concerns.

In September 2016, the EPA recommended a moratorium on the underground injection of fracking wastewater in certain earthquake-prone parts of Oklahoma because regulations had not successfully addressed the problem.

97.Will you uphold the EPA's recommendation—yes or no?

The State of Oklahoma has worked collaboratively with the EPA to address seismicity concerns and state regulators have shut down dozens of

AMERICAN OVERSIGHT

underground injection wells and, if confirmed, I will continue this cooperative approach to addressing such future issues as they might arise.

98. Specifically, EPA's recommendation arose out of the agency learning that the Oklahoma Corporation Commission, the body overseeing the underground injection control program in a primacy agreement with the EPA, has illegally permitted restricted wells to return to normal operations. While EPA cannot order Oklahoma to impose a moratorium, it can revoke the state's authority and take over regulation of the wells itself. As EPA Administrator, will you regulate these wells in compliance with the Safe Drinking Water Act and in addressing the seismic catastrophe occurring in your state—yes or no?

If confirmed as EPA Administrator I will review relevant information, including EPA's legal authorities, to ensure drinking water protections in Oklahoma and across the nation.

99.Do you think local communities have the right to protect themselves from pollution and other threats to public health?

Yes, if authorized under the law and not preempted or displaced by state or federal law.

100.Will you, as EPA Administrator, support these state and local regulations by not intervening or challenging them—yes or no?

I believe in cooperative federalism and I will work with States and local communities to protect citizens consistent with our nations laws.

101. How do you reconcile challenging these rules with your view of respecting and giving deference to state and local environmental regulation?

It is not clear to me what rules are being referred to in this question, however, I believe that environmental and public health protections are the strongest when there is collaboration across all levels of government consistent with applicable laws.

The FracTracker Alliance has shown that 11% of organic farms are within 1/2 mile of oil and gas development, and 100% of farms within the San Joaquin Valley and Southern California are within 8 miles of oil and gas operations (59,840 wells),

AMERICAN OVERSIGHT

and that produced water is being used to irrigate crops (and also organic crops). California feeds 50% of the country.

102. What is your response to the US maintaining food independence and food safety when the majority of its food sheds are threatened by oil and gas contamination?

I have seen no evidence or information that proximity to oil and natural gas development has contaminated or threatened to contaminate our nation's food safety. The State of California would be better able to address their laws and regulations with regards to the location of oil and gas development in their State as well as their irrigation policies.

103. Why is energy independence more important than food independence?

I have not made any statements ranking the importance of these two issues critical to our nation's health and welfare.

104. We have the opportunity to be both energy independent and food independent without poisoning people and the planet. Why should the US be dependent on other countries to supply its food, but not be dependent on other countries to supply its energy?

I support both the goals of domestic energy independence as well as protecting our domestic food supply and working collaboratively with our nation's farmers and ranchers.

105. From your Great Plains perspective how do you feel the advent of High Volume Hydraulic Fracturing (HVHF) will affect the growing concerns about food security/safety relative to energy infrastructure?

Oklahoma, as a rural state, has long successfully balanced safe energy production as well as farming and ranching.

106. How can the public trust the oil and gas industry when it is exempt from so many environmental regulations?

Any statutory exemptions come from Congress and if confirmed I will uphold the laws as directed by the Constitution.

AMERICAN OVERSIGHT

107. How can rural communities trust oil and gas operators when rural gas gathering lines are exempt from federal pipeline safety regulations (because of the exemption, states also cannot regulate rural gas gathering lines, and therefore because they are not regulated the operators do not have an obligation to report on incremental failures along the pipelines, they are only required to report if there is a need for an evacuation).

The State of Oklahoma has worked well with both rural communities and the domestic energy industry (including alternative energy producers as well as conventional) and, if confirmed, I will continue working to foster safe domestic energy development and maintain trust with our nation's communities both rural and urban.

The conventional food supply is sufficiently burdened by a toxic load from pesticides, herbicides, fertilizers, and genetic modification. It doesn't need yet another toxic burden.

108. How can consumers trust the food in restaurants and grocery stores when it may be grown near oil and gas operations?

If confirmed, I would expect to be briefed by staff to before taking action and would work to ensure EPA followed all applicable legal requirements and made decisions based on sound science.

109. How can parents trust the food that is being served to their kids in school cafeterias?

If confirmed, I would expect to be briefed by staff to assess what role, if any, EPA plays concerning the safety of food served in school cafeterias.

Many of our environmental laws were designed to permit regulation and enforcement by the states so long as state programs meet minimum federal standards established by EPA. Since state laws, however, do not always have general effect or application on Indian lands, Congress has amended several of our environmental statutes to permit tribes themselves to assume primacy of enforcement.

110. Do you intend to encourage tribes to develop their own enforcement regimes under approved programs, much as the states do? Or do you expect EPA itself to

AMERICAN OVERSIGHT

provide direct regulation and enforcement of federal environmental laws on Indian lands throughout the country?

If confirmed as Administrator, I would ensure that Indian lands were subject to adequate environmental regulation, whether that be through tribes utilizing regulatory powers as contemplated by Congress, or through direct regulation by the EPA.

Much of the nation's and the world's attention has been focused in recent months on the Dakota Access Pipeline, the construction of which crosses multiple states. Many pipelines on Indian lands are located entirely within a single state, however. Here EPA is not always the primary regulator, and state laws do not always apply. The health and environmental consequences of pipeline failures, however, can be enormous.

111. Will you commit to work with this Committee and other agencies to address the environmental and public health and safety issues associated with the operation of pipelines on Indian lands, including purely intrastate pipeline facilities?

If confirmed as Administrator, I would faithfully execute any obligations imposed on EPA by Congress to ensure the environmental soundness of pipelines on Indian lands.

Many of the nation's Superfund sites are on Indian lands. We are still dealing with clean-up issues from our uranium industry's legacy from the 1940s and 1950s. The nation's largest open pit uranium mine--Jackpile Mine on Laguna--was only recently added to the Superfund list. The largest Superfund site in the country in your own state is largely on Indian lands: Tar Creek on Quapaw. We have not fully addressed abandoned uranium mill tailings piles and the failure of the Church Rock Dam that dumped irradiated mill tailings into Navajo lands and waters. More recently the failure of the dam below the Gold King Mine in Colorado turned the San Juan River on the Navajo Reservation red all the way to Utah. Today, and nearly every day, fugitive coal dust emissions from trains silt over spawning grounds of treaty-protected fisheries. Oceangoing dumping threatens subsistence lifeways throughout Alaska and the Pacific Northwest. Newer and more virulent strains of black lung disease are overwhelming public health facilities in mining communities. These are just a few examples of major environmental issues that impact disproportionately the poor and the underrepresented elements of our society, including Indian communities and tribal lands.

AMERICAN OVERSIGHT

112. Can you assure us that under your leadership the EPA will address issues of environmental justice in Native American communities and offer a voice to those most affected by the environmental consequences of industrialization?

If confirmed as Administrator, I will faithfully execute all environmental laws enacted by Congress, and will do so in all communities, including Native American communities.

These questions extend to resources protected by treaties such as water rights and compacts, forestry, hunting and trapping, fishing, etc. Some treaties have language that doesn't apply any longer and needs to be updated. Other language needs updating to reflect cultural realities. For example, “hunting” rights do not include “trapping rights” in the letter of the treaty unless trapping is explicitly mentioned, even though the tribes did not differentiate between both.

113. Please describe the relationship between the federal government and American Indian Tribes as it relates to sovereignty the trust responsibility.

Pursuant to federal law, the federal government has a trust responsibility to American Indian Tribes.

114. What obligations do federal agencies have to formally consult with American Indian tribes? What about independent federal agencies?

The obligations of federal agencies--independent or otherwise--to formally consult with American Indian tribes are defined by federal law. If confirmed as Administrator, I will faithfully execute all laws enacted by Congress requiring or authorizing formal consultation with American Indian tribes.

115. What procedures should the EPA follow regarding permitting of infrastructure projects that could potentially impact American Indian tribes and their citizens?

If confirmed as Administrator, I will faithfully execute all laws enacted by Congress requiring that procedures be followed with regard to infrastructure projects that could potentially impact American Indian tribes and their citizens

116. How do you interpret the United Nations Declaration on the Rights of Indigenous Peoples, especially as it relates to obligations of the federal government?

AMERICAN OVERSIGHT

The federal government's obligations with respect to Indian tribes is defined by federal law.

117. Do you believe federal funding should be block granted to states to then disburse to tribes? Alternatively, should tribes receive their full and fair allocation of federal funding without being beholden to cumbersome state bureaucracy?

Federal funding should be disbursed to States and tribes in the manner directed by Congress.

118. What is the federal government's role in permitting extraction of mineral resources on federal Indian lands?

As trustee of federal Indian lands, the federal government's role is to act in the best interest of the tribes with regard to permitting extracting of mineral resources on those lands.

119. How will you promote economic development within Indian country?

If confirmed as Administrator, I will faithfully execute all laws enacted by Congress directing or authorizing me to promote economic development within Indian country.

120. How will you ensure the Bureau of Indian Education provides quality education to American Indian students?

The Bureau of Indian Education is overseen by the Department of the Interior, not EPA.

121. What is the role of the federal government to promote renewable energy development on American Indian lands?

The federal government's role in promoting renewable energy development on American Indian lands is determined by Congress. If confirmed as Administrator, I will faithfully execute all laws enacted by Congress imposing upon EPA duties relating to promoting renewable energy development on American Indian lands.

AMERICAN OVERSIGHT

122. What is the role of inter-agency cooperation to work across agencies on American Indian issues?

If confirmed as Administrator, I will faithfully execute all laws enacted by Congress imposing upon EPA duties relating to American Indian issues, and if faithful execution of those laws requires cooperation with other federal agencies, I will ensure that such cooperation occurs.

123. Will you work with the White House Inter-Agency Working Group on American Indian issues?

If confirmed as Administrator, I will faithfully execute all laws enacted by Congress requiring or authorizing me to work with the White House Inter-Agency Working Group on American Indian issues.

Federal Indian law has long recognized that tribes maintain authority over Indian country to the exclusion of states. Oklahoma has 38 federally recognized Indian tribes and those tribes exert jurisdiction over their lands throughout the state. But as Oklahoma Attorney General, your office has never filed a brief in support of tribal jurisdiction. Instead, your office filed briefs in ODEQ v. EPA, the Dollar General case, and several other cases OPPOSING tribal jurisdiction.

124. How can you hope to serve as a protector of tribal lands when you have, over and over again, advocated to deny tribal governments the right to regulate and protect their OWN resources?

As Oklahoma Attorney General, my duty was to ensure that the State of Oklahoma's jurisdiction was fully realized, and sometimes took legal actions in pursuit of that duty. If confirmed as Administrator, I will faithfully execute all laws enacted by Congress directing or authorizing me serve as a protector of tribal lands.

Indian lands outside reservation boundaries. The EPA has, since at least 1984, recognized the federal government's trust responsibility, which is built upon the longstanding historical and legal relationship between the federal government and Indian tribes. The EPA has also acknowledged that treaties, as part of the supreme law of the land, have the same legal force as federal statutes and must be considered when making agency decisions.

AMERICAN OVERSIGHT

125. How will you work to protect tribal treaty lands and resources that lie outside of reservation boundaries, and how will you help expand tribal authority over those lands and resources?

If confirmed as Administrator, I will faithfully execute all laws enacted by Congress directing or authorizing me to regulate tribal treaty lands and resources and directing or authorizing me to seek to expand tribal authority over those lands and resources.

Tribal communities, especially those in Alaska, have borne the brunt of the impacts of climate change. Several Native Alaskan villages have seen their entire way of life vanish as their homes have begun to erode away beneath their feet due to rising sea levels. Others have seen vital food supplies contaminated and sacred species of fish devastated by climate change.

126. How do you plan to protect native peoples from the effects of climate change?

If confirmed as EPA Administrator, I will adhere to the applicable statutory authorities to fulfill EPA's mission to protect human health and the environment for all of our nation's citizens.

127.There are established consultation processes set up for Indian Nations. Will you have "meaningful" talks with them? Will your Agency be transparent in all dealings with Tribal Nations? Will you be honest and fair?

If confirmed as Administrator, I will faithfully execute all laws enacted by Congress requiring consultation processes for Indian tribes. I will engage all who have business before the EPA--including Indian tribes--in meaningful, transparent, honest, and fair processes.

AMERICAN OVERSIGHT

Senator Sullivan:

1. Alaska's seafood industry is the nation's largest and is one of major employer's in the Alaska economy. In fact, over 60 percent of the nation's commercially harvested fishery resources are caught and processed in Alaska. Alaska's waters remain some of the cleanest and most pristine in the nation. Most of the seafood processors who process these great resources are located in remote areas of Alaska. Each of those processors hold Clean Water Act discharge permits for the small amounts of seafood waste produced during procession operations.
